Dear Guy,

what is the status of the work with Cedesurk?

We are writing the proposal for the Visjon2030 call, where DRC could be included. However, as it is a research proposal, it has to focus on the University collaboration. Thus, Cedesurk should be the main partner, being responsible for the installation in their network. My vision would be that Monka drives the commercialisation, being the roll-out extending from the Universities and further to e.g. student dormitories++

Thus:

- are you interested in such a proposal?
- can you get Cedesurk onboard as partner (responsible for roll-out)?

Regarding the budget, I would see that we can cover 2 Mbit/s costs for 3 years (at 900 US\$/month), and some workload from you, your folks and Cedesurk in addition to the equipment.

Kind regards

Josef
