

BRAKE PADS for Disc Brake

- M01/M03/M06: Longer pad-life, good for anti-fade, good constancy either dry/wet. May cause noise while braking.
- M02/M04/M05/M07/M07S: Noise does not occur as readily as with metal pads, but braking force, anti-fade characteristics and durability decrease when wet.
- M06Ti: Longer pad-life, good for anti-fade, good constancy either dry/wet. May cause noise while braking titanium plate, light weight.
- M07Ti: Longer pad-life on long descend titanium plate, light weight.
- C01: Easy, controllable metal pad, good for trekking use.
- A01S/B01S: Better modulation, less chance to cause noise.
