ARTEMIS Call 2010 - SP269317

including presentation of use-case partners: National Rail Administration of Norway (JBV) Telenor Objects

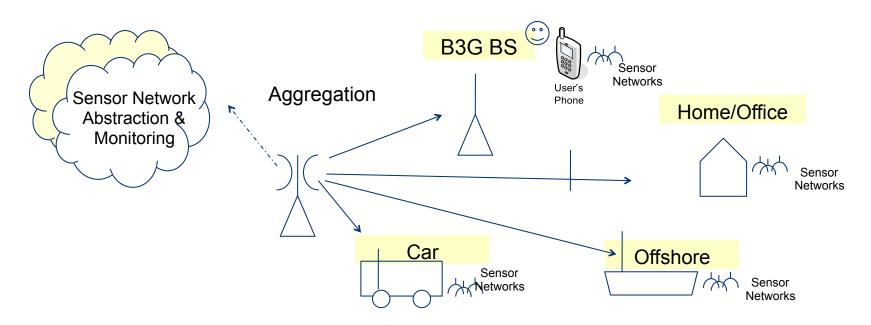

Center for Wireless Innovation

A facilitator for industry and seven research institutions to form strategic partnerships in wireless R&D

frodag 28 mai 2010

Technical competence

- Movation: Industrial cluster, including Telenor, Opera, Statoil, Nets, Simula,
- Scandinavian Mobile Technology (Noom): Service provider for "Call-a-device"
- ESIS: Semantic Integration Socialtainment
- Use-case partners (associated)
 - Norwegian Rail Administration (JBV):
 - Including sensors in business process
 - Telenor Objects:
 - Application development, Semantic extension
 - Collaboration on standardisation
- Norwegian Defense Research (FFI) *interest*
 - Identity management for the IoT (incl. cryptography)
- SIMLINK WLAN/NFC SIM interest
 - Trusted mobile platform (SIM) for M2M applications

Scandinavian Mobile technology

(NOOM)

Scandinavian Mobile Teg

 The new generation of mobile subscribers will not use numbers for calls, but phone domain names and nicknames

Ref.: Dr. Mockapetris, the inventor of Internet Domain Names

- Moving Internet Domains to the Mobile world
- Product- and Service Name can be called
- Keywords can be called
- All unique Identities and Strings may be called
- Option: Toll free (green calls) for the users

Welcome to the leading open Innovation Stock Exchange in the Nordics

Innovation by design - Making your ideas smarter, your growth faster and your success larger!

For Entrepreneurs

- present your idea to investors
- get help from experts
- find competent capital

For Investors

- the best ideas and companies in search for funding
- structured process with expert evaluation
- platform for collaboration with other investors

Goal

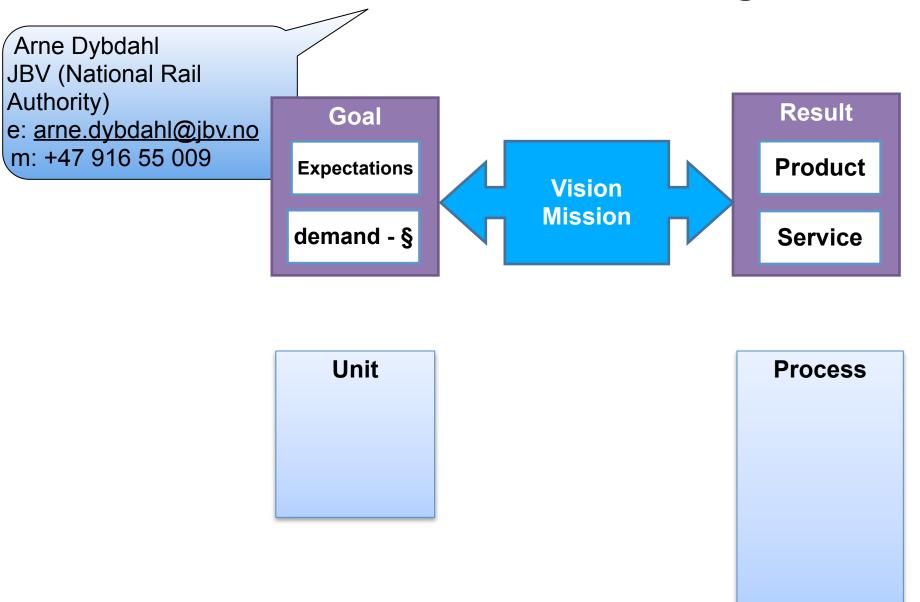

Result

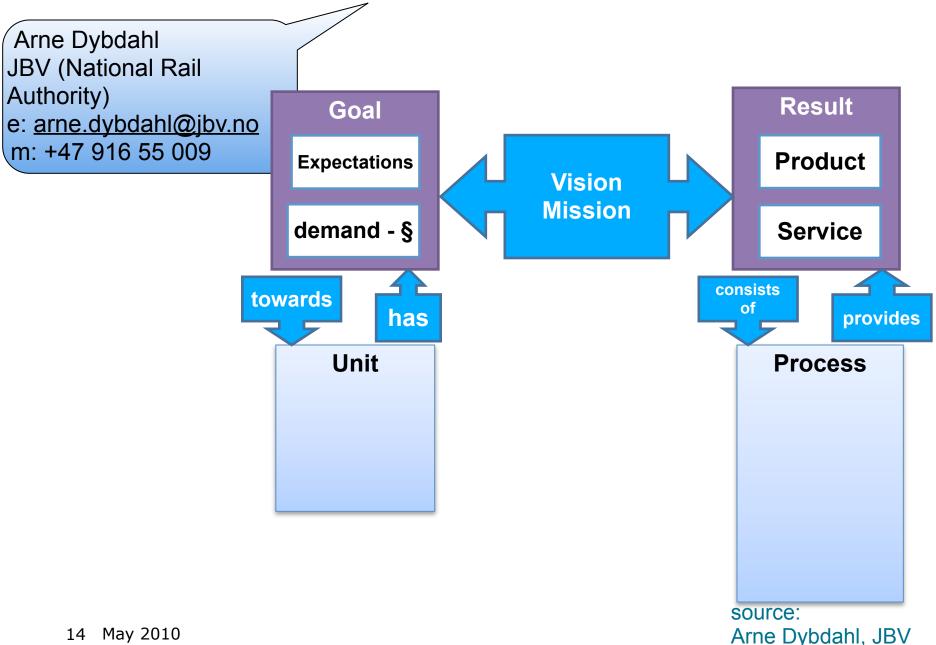

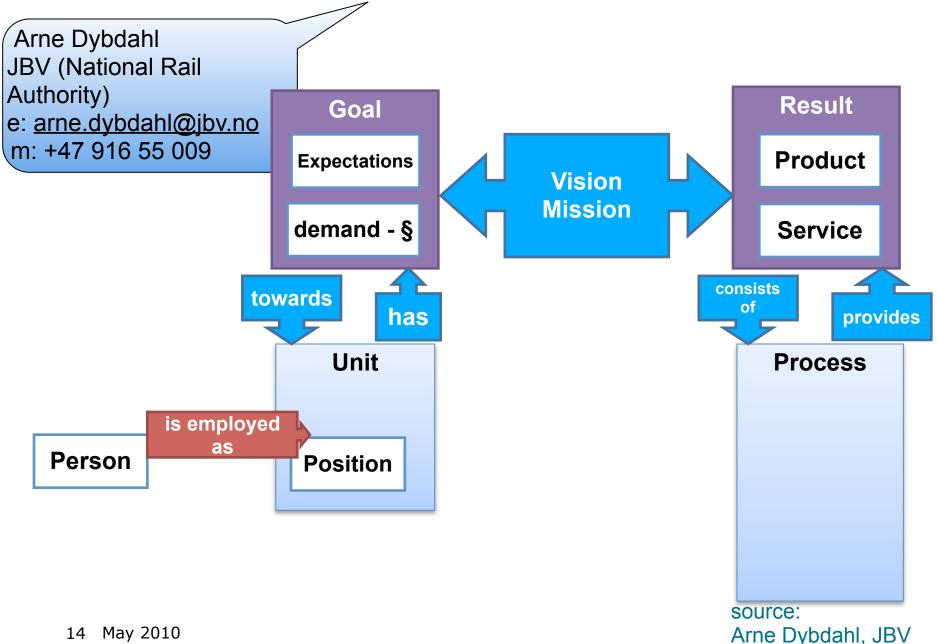

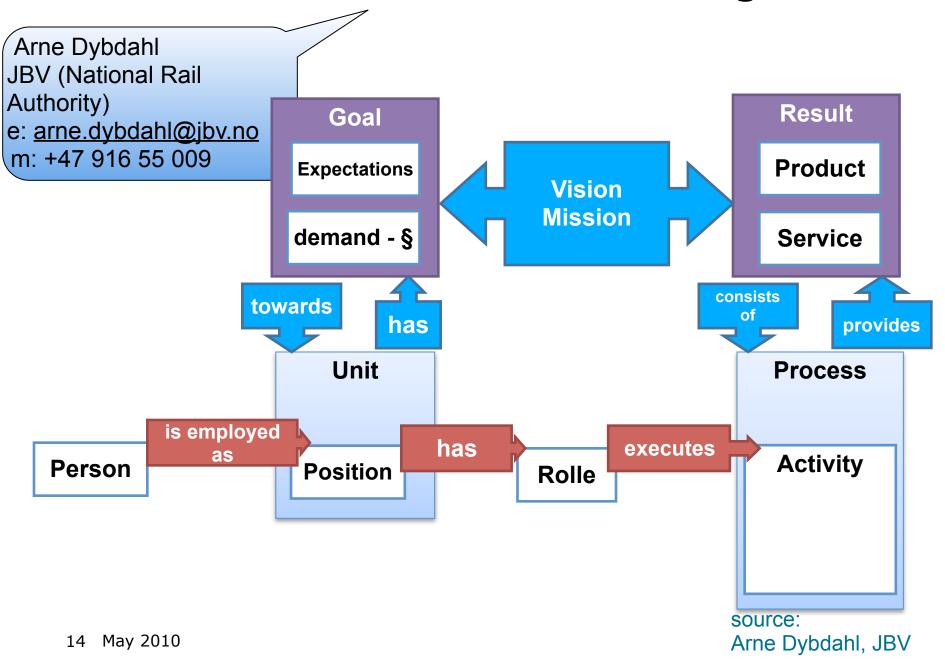

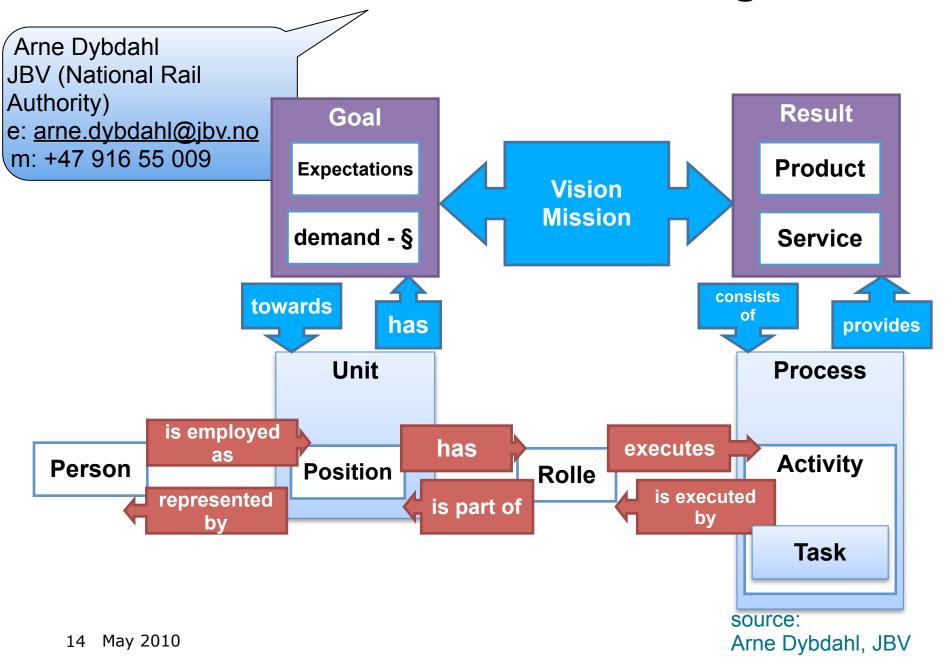

14 May 2010

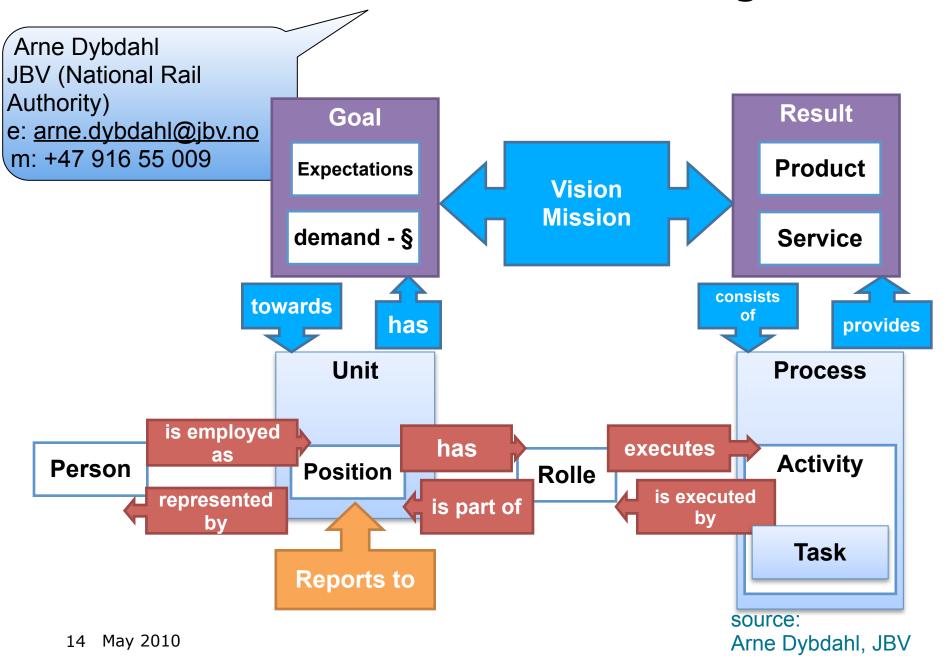

source: Arne Dybdahl, JBV

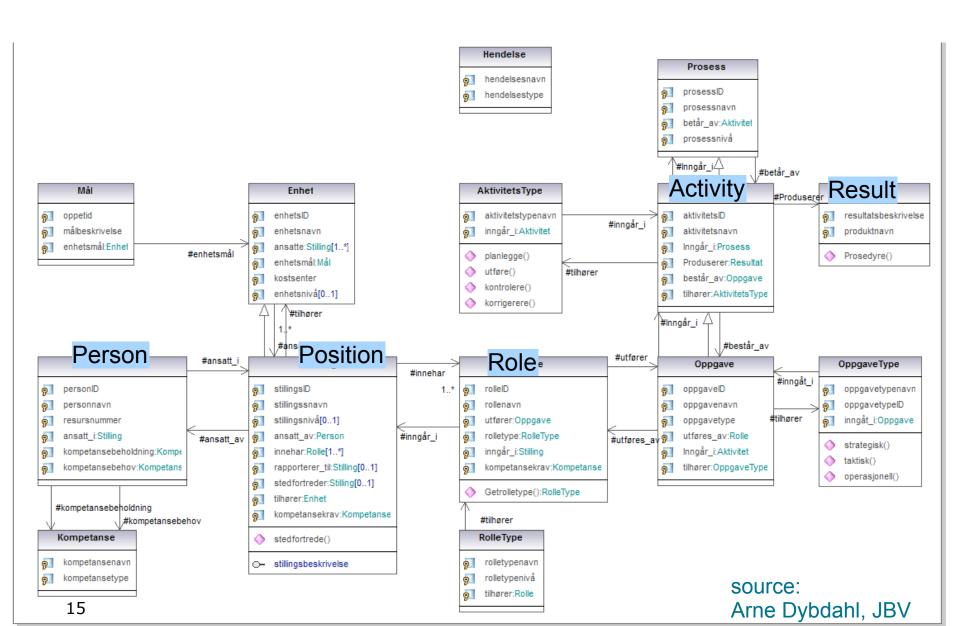

A slightly bigger semantic model

JBV - three examples

Punctuality

 how can sensors contribute to knowledge about real time train information

Processes

Sensors to measure variance in the production

Processes

semantic descriptions for interoperability

Telenor Objects

- Started 1st of July 2009
- Several customer cases already live within RFID, sensoring and control
- Target markets: 1. Scandinavia, 2. Other Telenor markets, 3. Other M2M intensive markets
- Working closely with Telenor sales channels to expand footprint

Our Vision:

To be best in class enabling open communication between any device and any application

Telenor focus within M2M

Value added services (applications, SI)

System Applications (service enablement)

Network Services (connectivity)

Devices on net

Company presentation - FFI

FFI

Research for the Norwegian Defense

FFI is the prime institution responsible for defence-related research in Norway. The Establishment is the chief adviser on defence-related science and technology to the Ministry of Defence and the Norwegian Armed Forces' military organization.

In the area of authentication and identity management in tactical and mobile networks, FFI is interested in a cooperation on "identity management in the internet of things", including tags (NFC), sensors and embedded systems. The challenge they are facing is to estalish an IdM which is scalable, can use non-consistent communication channels such as NFC and to use cryptalgorithsm being supported by microcontrolers. pSHIELD is of interest for FFI, especially with respect to identity and cryptography.

Company presentation - SIMLINK

SIMLINK

the trusted SIM in every device

WLANSIM

Simlink has developed a WLAN SIM, providing

- * security options with OTA (over the air application insta
- * interesting technology for micro- and personal-nodes
- * several sensor applications in the market
