nSHIELD System Architecture NODE LAYER

Budapest, 11-12 September 2012
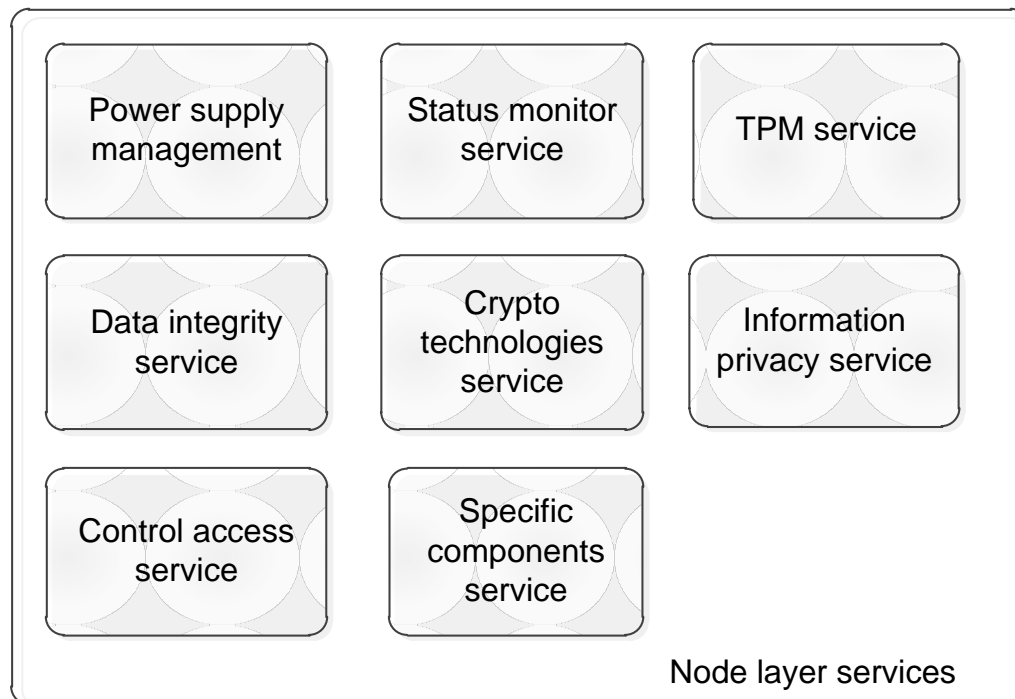

Lorena de Celis (ACO)

ARTEMIS Call 2010 – ASP6, No: 269317
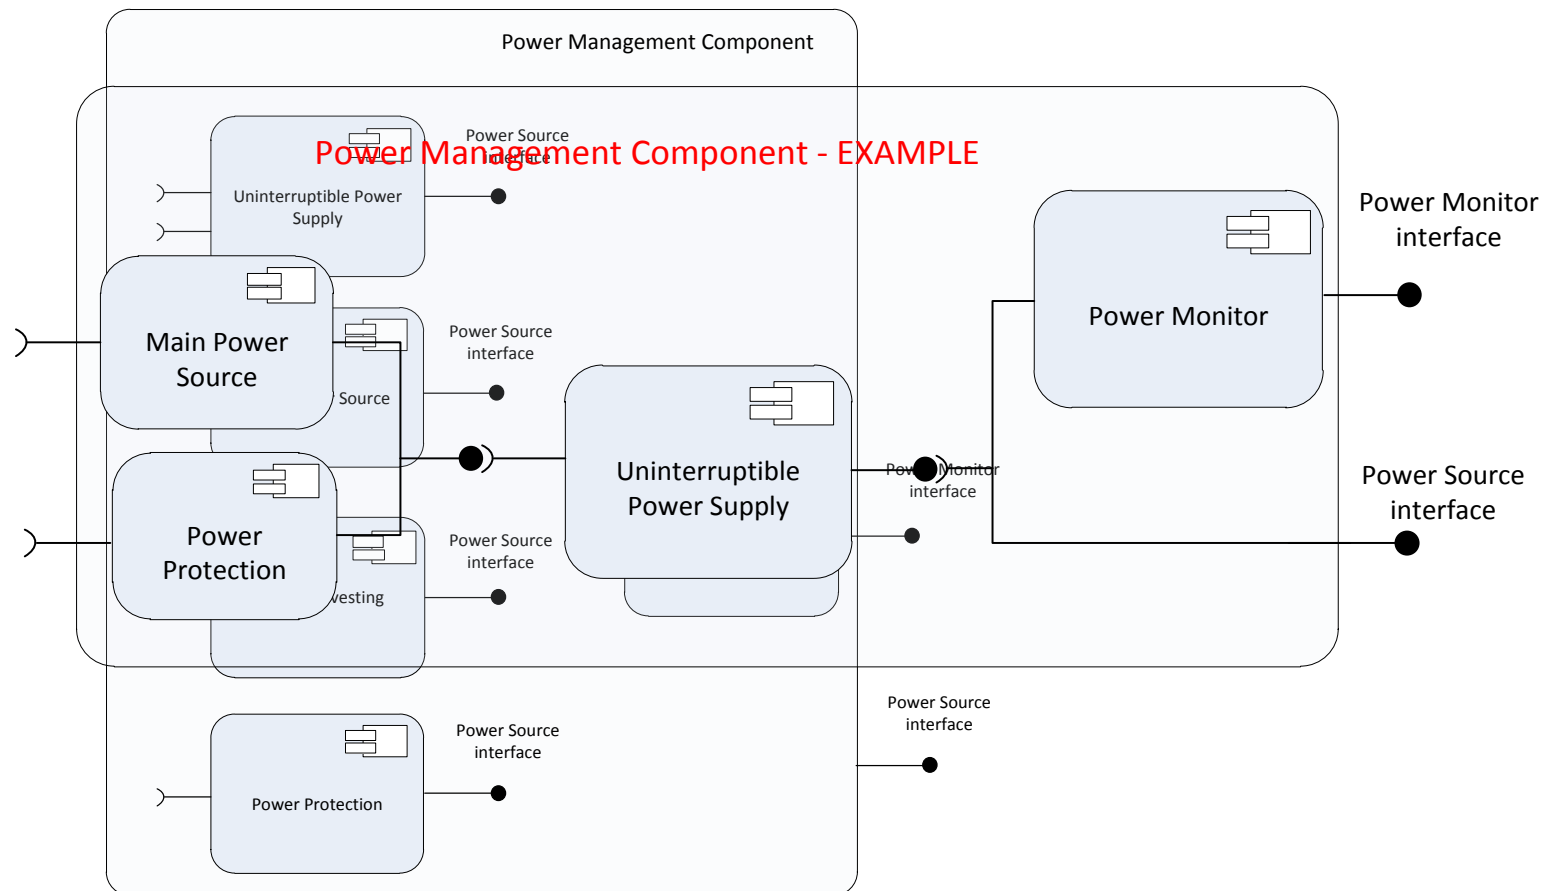

- D2.3 – Logical view

- D2.4 – Physical view
  - ➢ How to finish the remaining work
  - ➢ WPs implications

nSHIELD

- List of services identified after reading available version of requirements

- Comment by THYIA: "*It is not providing a good match with SMN scenario. It is true also for other scenarios*"

Power supply management	Status monitor service	TPM service
Data integrity service	Crypto technologies service	Information privacy service
Control access service	Specific components service	

Node layer services

- Previous services have been defined from an engineer point of view. An initial description can be found in current version of D2.4

How to finish the remaining work

- What is missing?
  - Some comments have been provided after "considering **D2.3** finished". THYIA commented that SNM scenario were not covered with the proposed services. What is missing?
  - **D2.4:** Not all the components are fully defined. I would appreciate help from partners involved in node layer definition THYIA and T2DATA.
- Any other comment or recommendation from any partner will be more than welcomed

Other WP implications

- TA (WP3): *"…the sharing and exchange of proper design specifications and requirements previously defined in WP2 and subsequently updated according to first technology prototypes release, will permit the development of nSHIELD framework first level"*
