# **TEK5530 - Measurable Security for the Internet of Things** L7 - Multi-Metrics Weighting of an AMR sub-system

György Kálmán, DNB / ITS

Josef Noll UiO, ITS josef.noll@its.uio.no

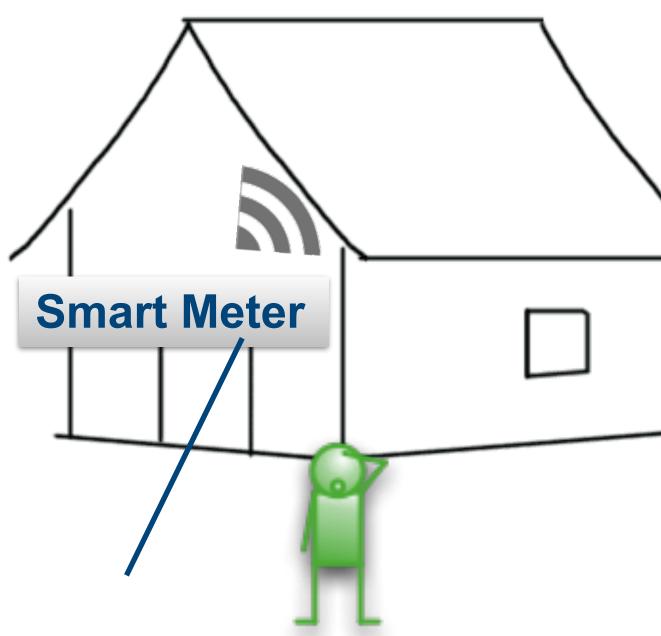

http://loTSec.no, #loTSec,

The Faculty of Mathematics and Natural Sciences

## Overview

- Learning outcomes L7
- Use case (application) Automatic Meter Reader (AMR)
- Identification of sub-system
- Metrics for the s,p-functionality
- Values for Security, Privacy
- weighting of components
- Multi-Metrics analysis
- Evaluation of results
- Future work

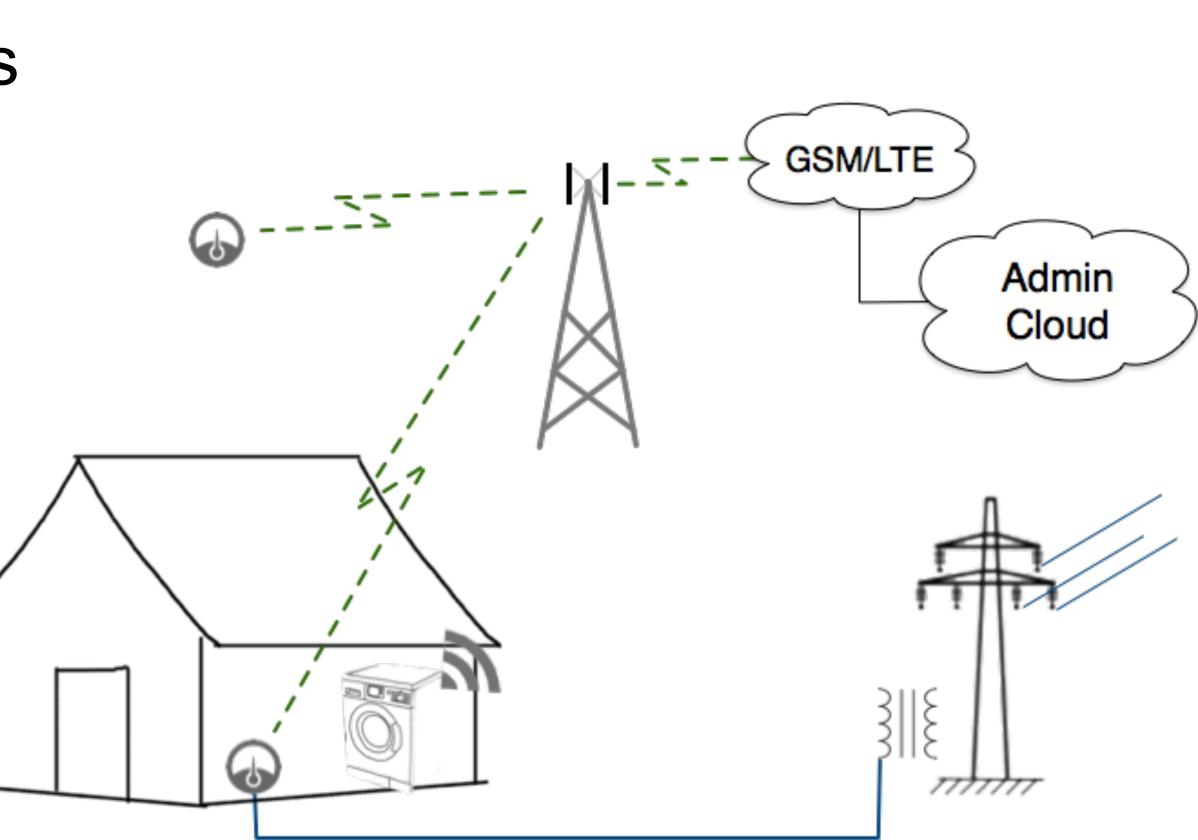

The Faculty of Mathematics and Natural Sciences

## **Expected Learning outcomes**

- Having followed the lecture, you can
- subdivide a system into sub-systems and components
- identify s,p,d-functionalities
- reason over (discuss) the weighting of components with respect to total security
- apply the Multi-Metrics method
- provide meaning for s,p-results

The Faculty of Mathematics and Natural Sciences

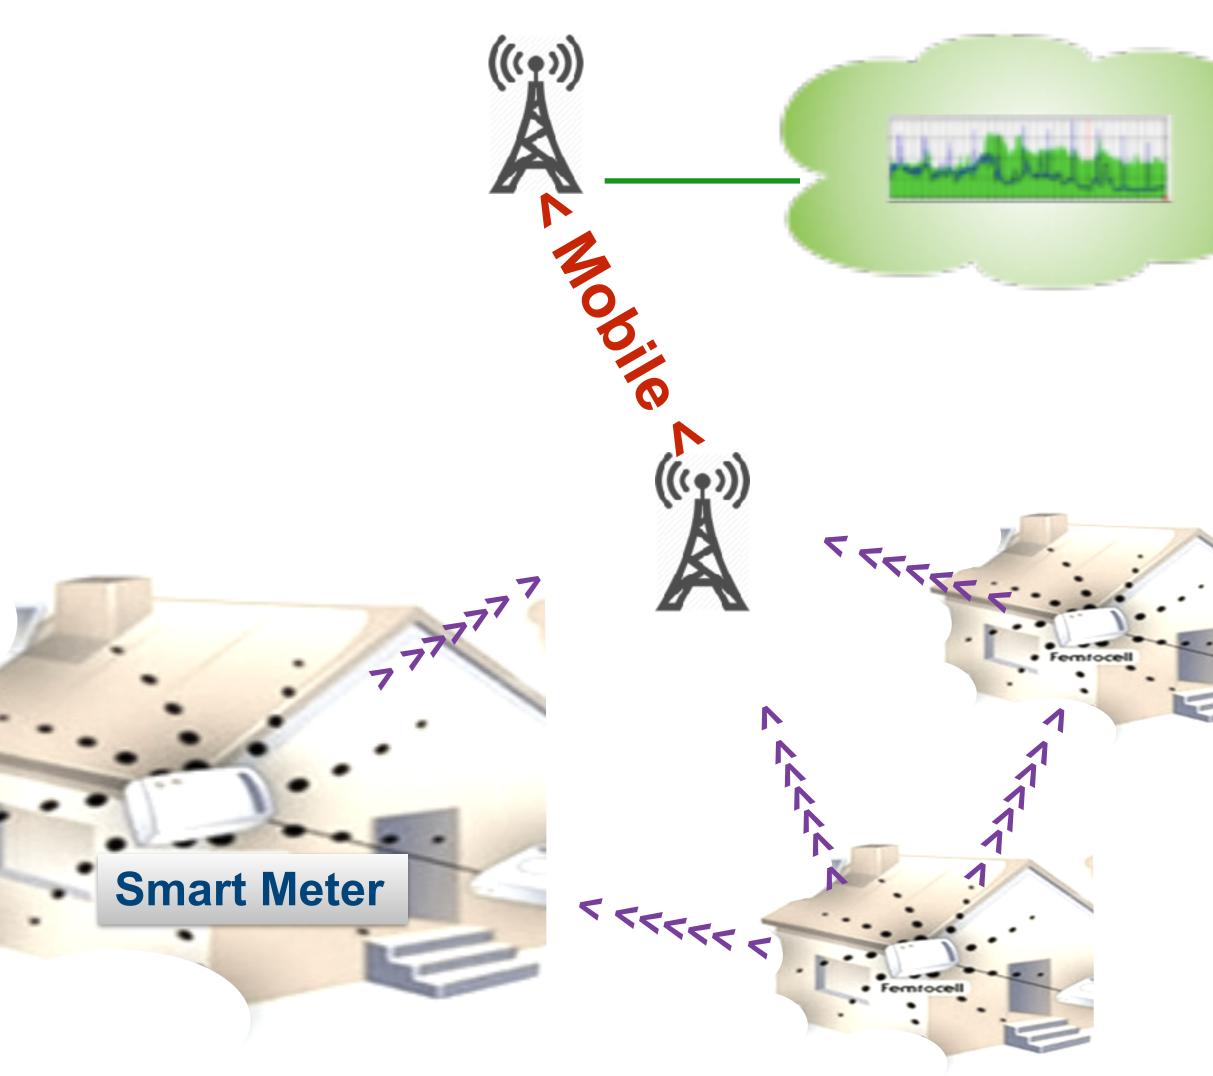

## **Current Infrastructure**

- Smart Meter (customer home)
  - connected via mesh or directly
  - proprietary solution (800 MHz band)

#### Collector

- collects measures
- communicates via mobile network
- Mobile Network
  - as a transmission network
- Cloud (Provider)

entry point for remote access **Application platform** 

[source: <u>seminarsonly.com</u>]

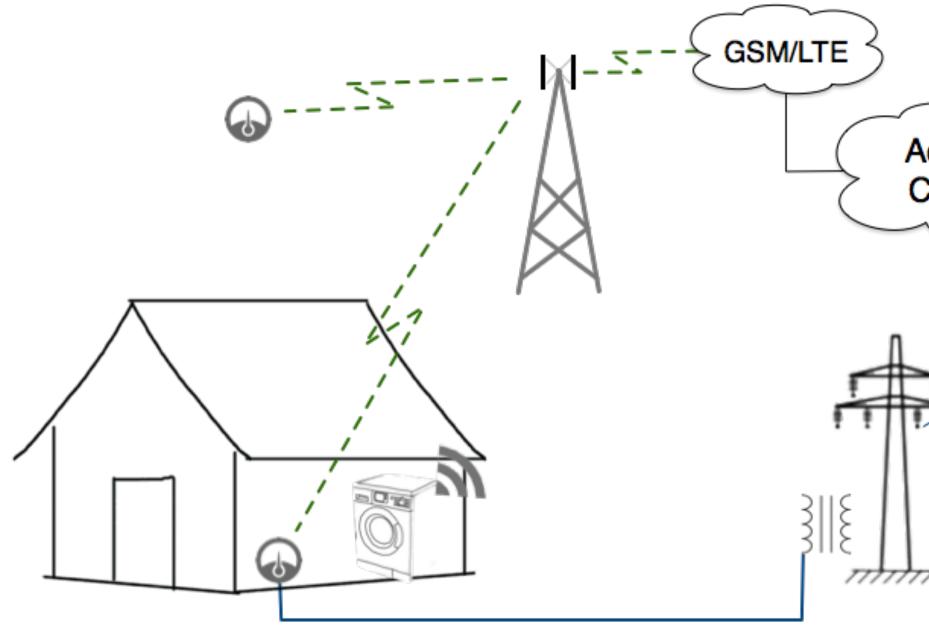

The Faculty of Mathematics and Natural Sciences

# **Application Scenarios for Smart Meters**

- Monitoring the grid to achieve a grid stability of at least 99,96%,
- Alarm functionality, addressing
  - failure of components in the grid,
  - alarms related to the Smart Home, e.g. burglary, fire, or water leakage,
- Intrusion detection, monitoring both hacking attempts to the home as well as the control center and any entity in between,
- **Billing** functionality, providing at least the total consumption every hour, or even providing information such as max usage,
- **Remote home control**, interacting with e.g. the heating system

Contributing to the stability of the grid

- Fault tolerance and failure recovery, providing a quick recovery from a failure.
- Future services
  - Monitoring of activity at home, e.g. "virtual fall sensor"

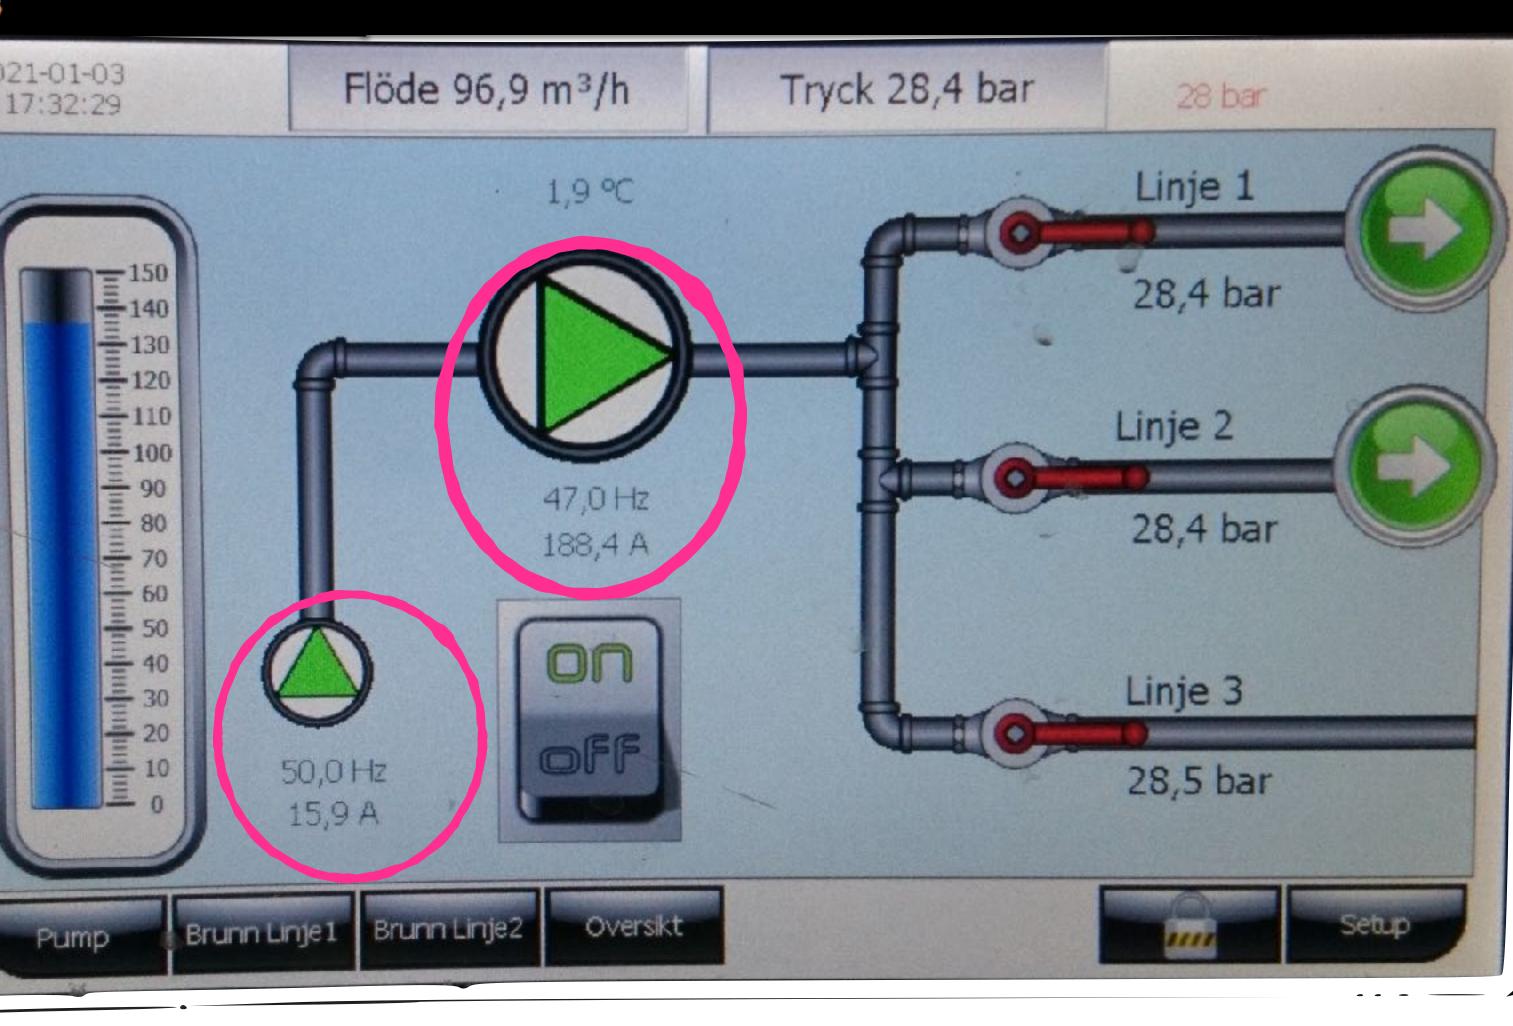

The Faculty of Mathematics and Natural Sciences

Quality of the electricity network: Frequency & Voltage in the distribution grid, here Pump 1 water intake: 50 Hz, 15.9 A Pump 2 compression: 47 Hz, 188.4 A

EK5530 - Measurable Security

Pump

The Faculty of Mathematics and Natural Sciences

#### Action: **Establish Application Goals for Security & Privacy**

- Discuss with your neighbours the security and privacy goal for :
- Billing (1/hour)
  - Security, Privacy Goal: (s,p) Range [0...100]
- ➡ Fire alarm
  - Security, Privacy Goal: (s,p) Range [0...100]
- Home Control (1/hour)
  - Security, Privacy Goal: (s,p) Range [0...100]

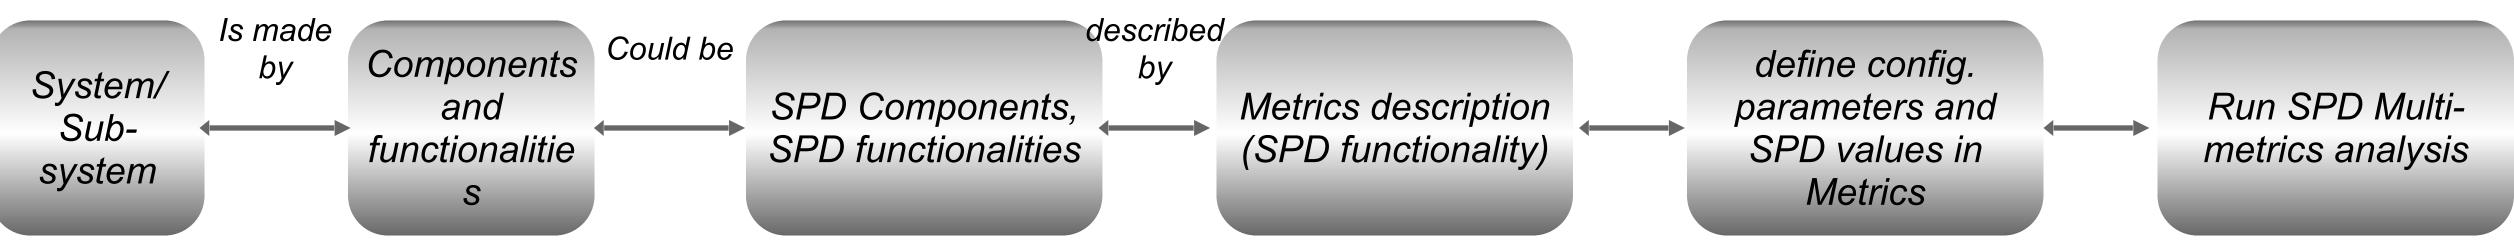

Goal: - "basis of discussion" - why?

The Faculty of Mathematics and Natural Sciences

#### Methodology and AMR system: From System description to SPD level

- System: Automatic Meter System (AMS) consists of reader (AMR), aggregator, communications, storage, user access
- Sub-systems: AMR consists of power monitor, processing unit, communication unit
- Component: AMR communication contains of a baseband processing, antenna, wireless link

Configuration Parameter: Wireless link: f=868 MHz, output power=?, Encryption=?

The Faculty of Mathematics and Natural Sciences

## Task

### Provide a list of Security Functionalities (e.g. encryption)

• 10 min search in Literature

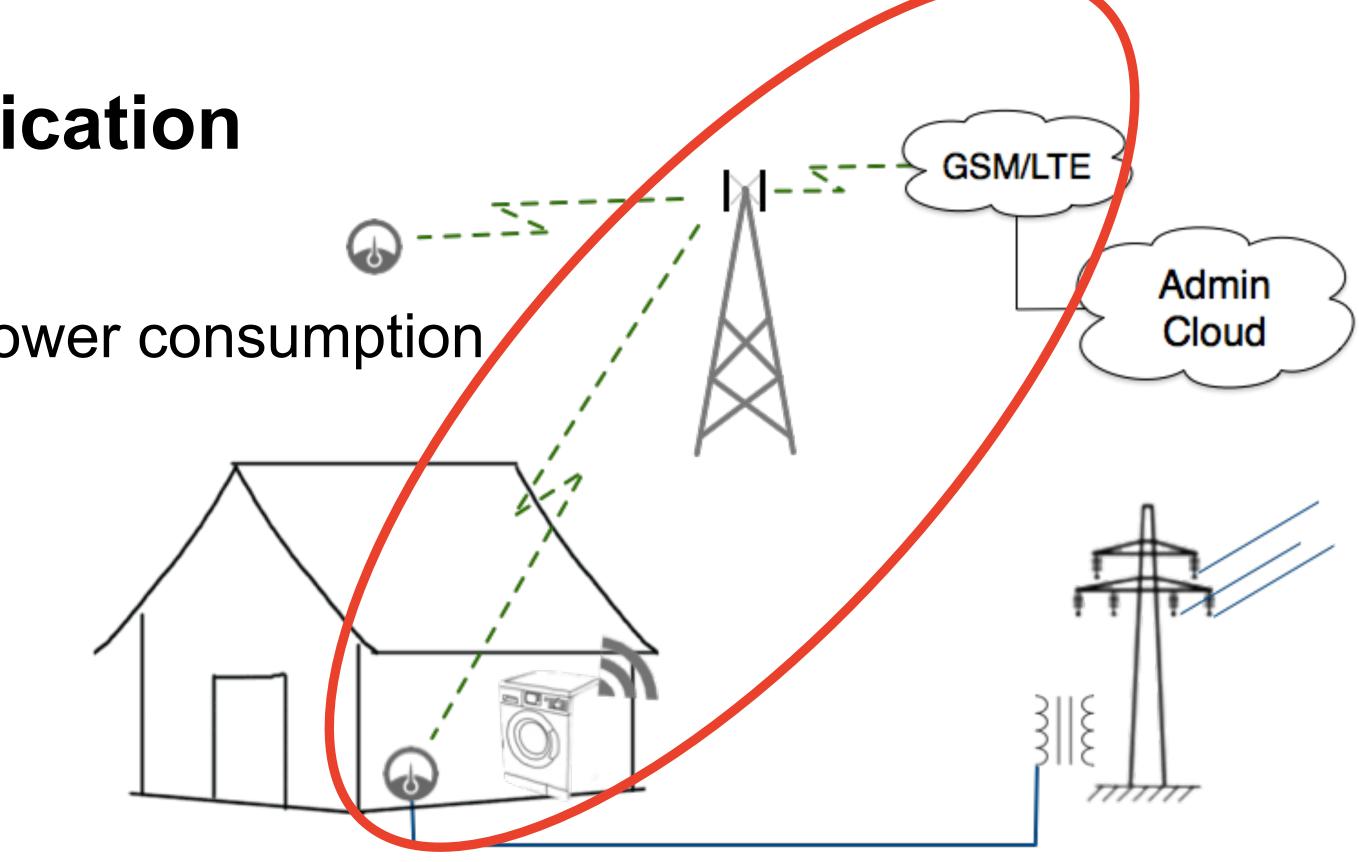

The Faculty of Mathematics and Natural Sciences

#### Sub-system analysis Here: Smart Meter with Communication

- the Automatic Meter Reader (AMR)
  - AMR to measure, sense and control power consumption
- the Mesh radio link
  - direct communication to concentrator
  - or multi-hop through other AMR
- the Mobile link sub-systems
  - from collector to mobile operator
  - typical 2G/3G/4G data, or SMS

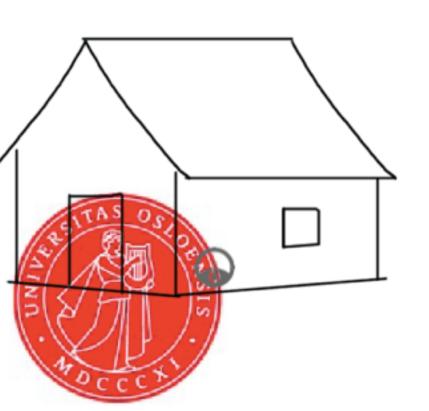

The Faculty of Mathematics and Natural Sciences

#### **Sub-system analysis Metrics for AMR**

- the Automatic Meter Reader (AMR)
  - (1) remote access metric (yes/no)
    - reading, or just controlling
  - (2) authentication metric
    - everyone, or authenticated user
  - (3) encryption metric (on, off)

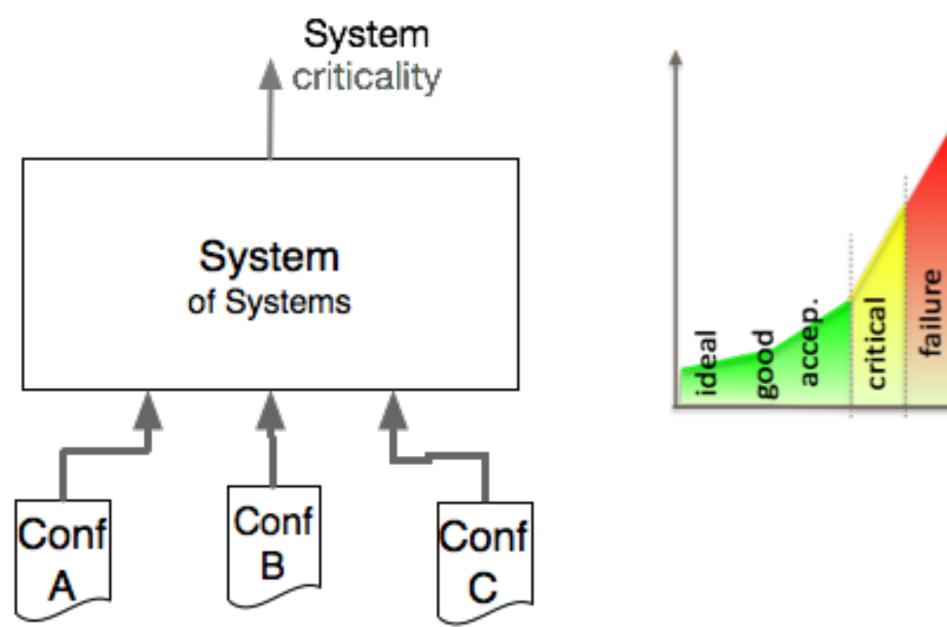

#### (1) remote access

Configuration	Cs	Ср	
Remote Access ON	60	60	
Remote Access OFF	10	20	

#### (Cs, Cp, Cd) = (100, 100, 100) - (s, p, d).

#### **(2)** authentication Configuration Cs Ср 30 Authentication ON 10

70

80

(3) encry Configuration	ptic	
Encryption ON	10	
Encryption OFF	80	

Authentication OFF

The Faculty of Mathematics and Natural Sciences

#### **Sub-system analysis Metrics for Mesh Radio**

- the Mesh radio link
  - (4) mesh
  - (5) message rate
  - (3) encryption

(4)	n
Configurati	0
Multi-path r	0
Single-path	rc

(3) encryption				
Configuration	Cs	Ср		
Encryption ON	10	10		
Encryption OFF	80	80		

	Configuration	Cs	Ср

#### AMR sub-system analysis Summary of Metrics for functionality

- the Automatic Meter Reader (AMR)
  - (1) remote access metric
  - (2) authentication metric
  - (3) encryption metric
- the Mesh radio link
  - (4) mesh
  - (5) message rate
  - (3) encryption
- the Mobile link sub-systems

(1)			
Configuration	Cs	Ср	
Remote Access ON	60	60	
Remote Access OFF	10	20	

(3)			
Configuration	Cs	Ср	
Encryption ON	10	10	
Encryption OFF	80	80	

(4)			
Configuration	Cs	Ср	
Multi-path routing	60	60	
Single-path routing	30	30	

(6)				
Configuration	Cs	Ср		
GPRS	60	70		
SMS	40	50		

Configuration	Cs	C
Authentication ON	10	3
Authentication OFF	80	7

(5)		
Configuration	Cs	Cp
1 hour	20	20
20 min	25	30
1 min	40	50
5 sec	50	70

# Multi-Metrics<sub>v2</sub> - system composition

- - security
  - privacy
  - dependability

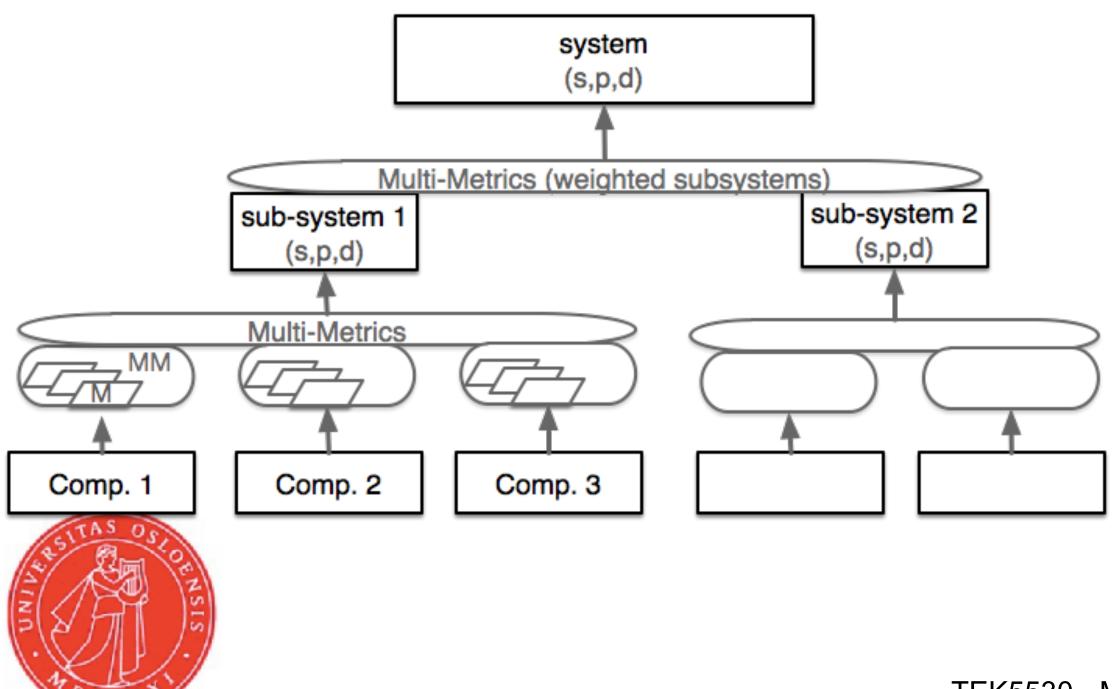

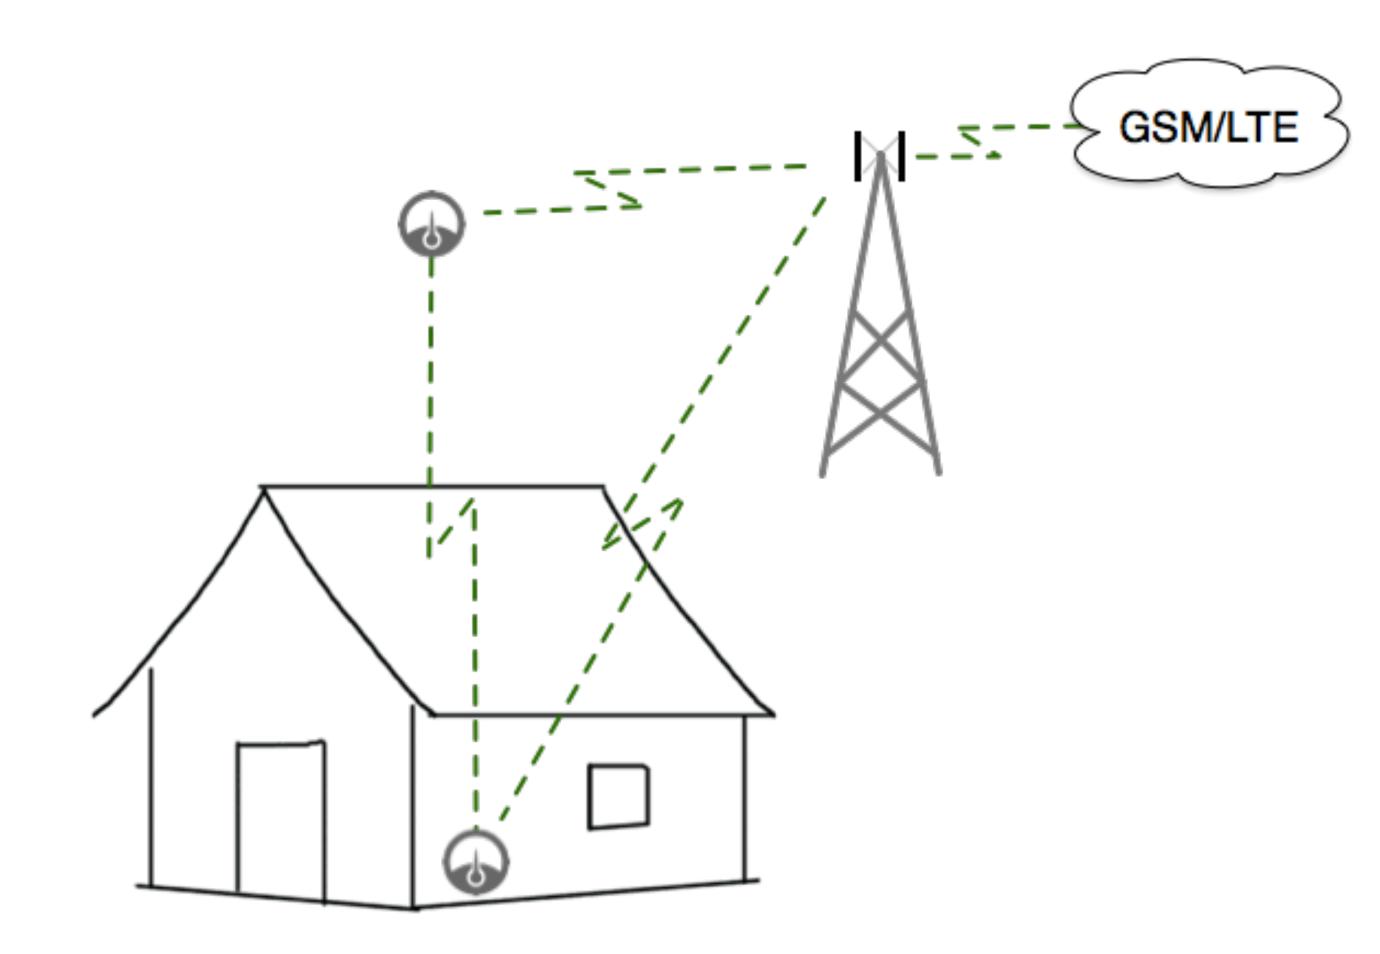

The Faculty of Mathematics and Natural Sciences

## Why weighting of sub-systems?

TEK5530 - Measurable Security

The Faculty of Mathematics and Natural Sciences

# Sub-system weighting

- Component criticality from metrics
- sub-system criticality from evaluation of components
- system criticality from evaluation of subsystems
- Criticality C through root mean square weight
- $\rightarrow$  Actual criticality  $x_i$  for component or (sub-)system
- $\rightarrow$  Weight  $w_i$  for each metric,

Result will maximise the impact of high criticalities

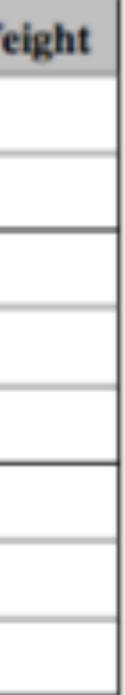

$$C = \sqrt{\sum_{i}^{} \left(\frac{x_i^2 W_i}{\sum_{i}^n W_i}\right)} \qquad \qquad W_i = \left(\frac{w_i}{100}\right)$$

Table 8 Sub-systems and components weights

Sub-system	Sub-sys. Weight	Component	Comp. We
	80	Remote Access	70
AMS		Authentication	80
		Encryption	80
Radio link	50	Mesh	60
		Message Rate	80
		Encryption	40
Mobile link	20	Mobile link	70
		Encryption	40

The Faculty of Mathematics and Natural Sciences

## s,p-goal versus system-s,p

- 11 possible configurations
  - selected as combinations of "states"
- highest SPD element dominates the outcome of the metrics
  - Billing & Home Control: security
  - Alarm: dependability
- Sensitivity Analysis:
  - max security: s=84
  - same config: p=77
  - satisfies billing satisfies home control

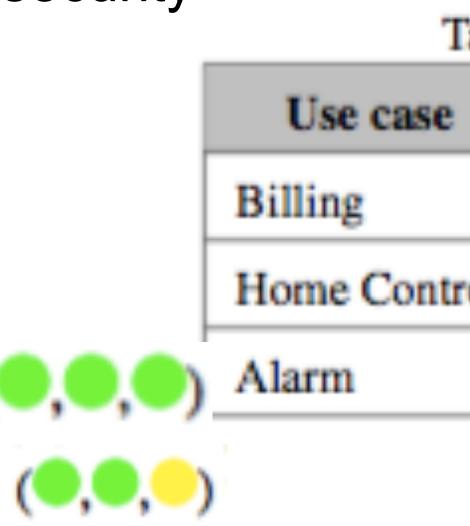

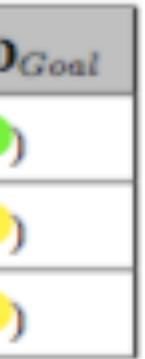

Table 1	$SPD_{Goa}$
---------	-------------

Table 1 SPD <sub>Goal</sub> of e		
Use Case	Security	Privacy
Billing	90	80
Home Control	90	80
Alarm	60	40

Table 9 Selected configuration SPD level for each use case

	SPD <sub>Goal</sub>	Configuration	SPD level	SPD vs SPD
	(90,80,40)	10	(67,61,47)	(,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
rol	(90,80,60)	10	(67,61,47)	(,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
	(60,40,80)	6	(31,33,63)	(•,•,•

The Faculty of Mathematics and Natural Sciences

## Conclusions

- Security and Privacy methodology applied for Smart Grid
- Sub-system Meter Reader, Mesh communication, Mobile Communication assessed
- Weighting, see example
- 11 configurations assessed, best result providing (s,p,d) = (84,77,42)

#### Table 8 Sub-systems and components weights

Sub-system	Sub-sys. Weight	Component	Comp. Weight
AMS	80	Remote Access	70
		Authentication	80
		Encryption	80
Radio link 50		Mesh	60
	50	Message Rate	80
		Encryption	40
Mobile link	20	Mobile link	70
		Encryption	40
