Unstable economies are drivers for conflicts

→ Social Mobility (WEF 2019)

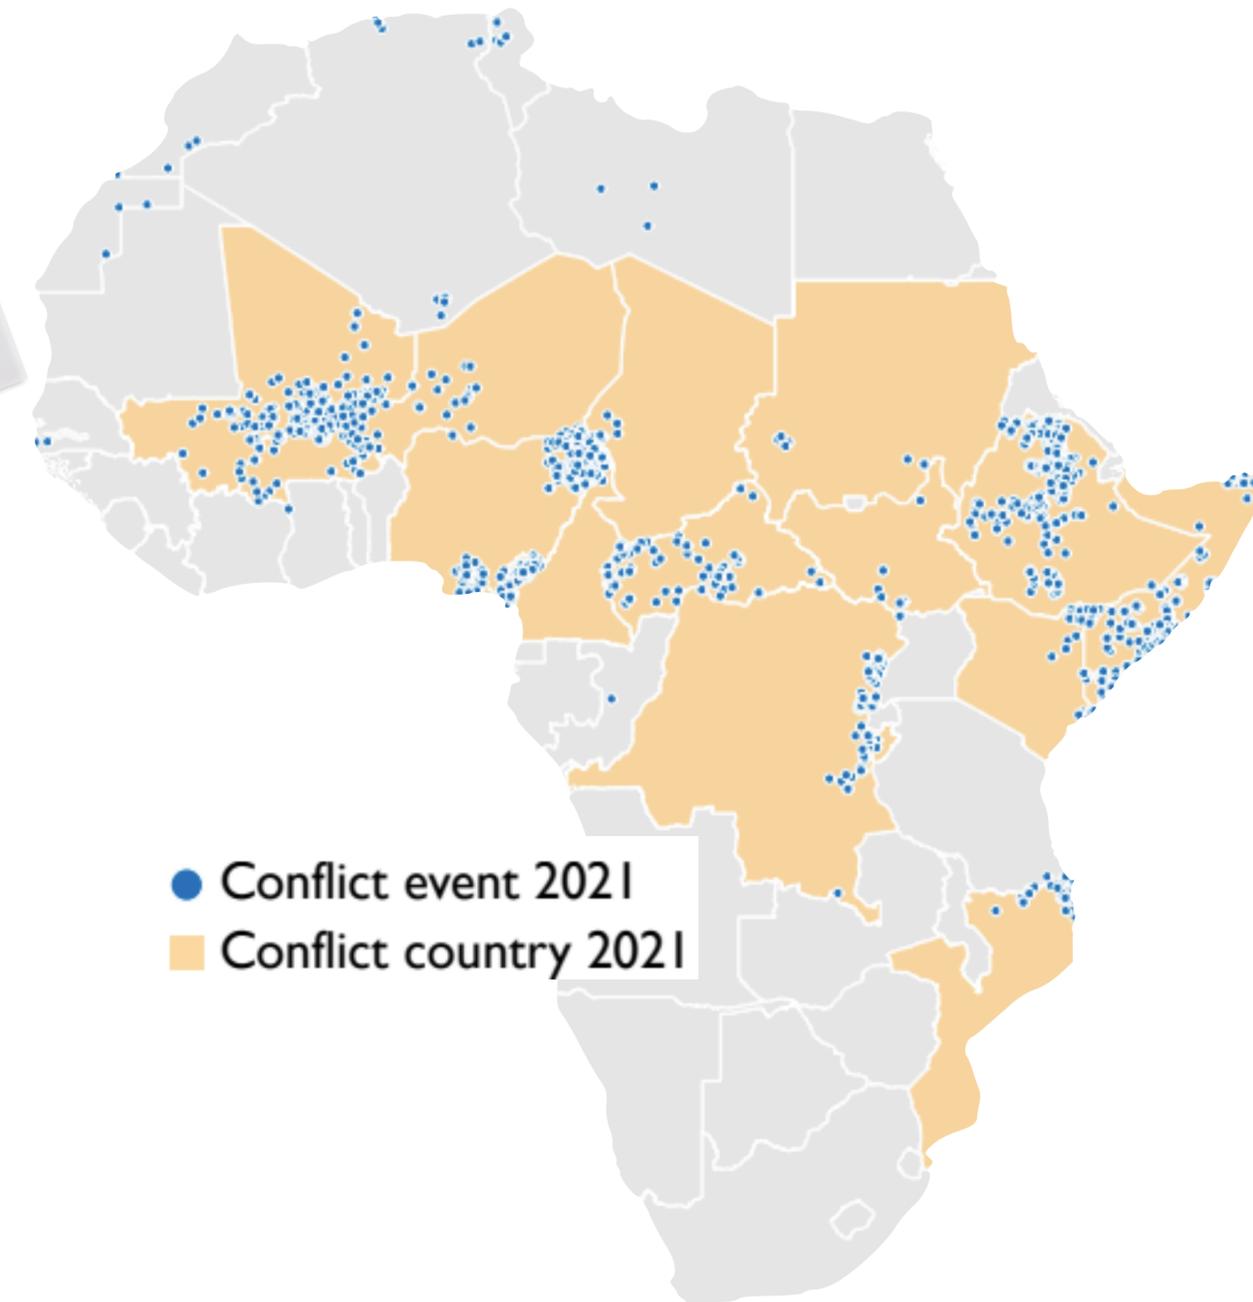

- Ability to move up the pyramid
- 1) Denmark
- 2) Norway
- 3-5 other Nordics

Power Grid Cyber Attacks Keep the Pentagon Up at Night

A detailed look at why computers running the U.S. electrical infrastructure are so vulnerable to digital threats

By Michael McElfresh and The Conversation | June 8, 2015

The following essay is reprinted with permission from The Conversation, an online publication covering the latest research.

It's very hard to overstate how important the US power grid is to American society and its economy. Every critical infrastructure, from communications to water, is built on it and every important business function from banking to milking cows is completely dependent on it.

Societal Security in the digital age

- Framework conditions
 - economics (open Internet, privacy)
 - app control
 - .no has to be "Norwegian laws"
- Protection of data & infrastructure
 - energy is critical infrastructure
 - empowerment of every single person

"Hvor .no står, må Norske regler gjelder"

The Business Model

Mobile Internet in SSA

→ Western World

- fixed & mobile & work - about 100-200 USD/family
-  17.000 base stations,  EU: 421.000 towers [Statista]

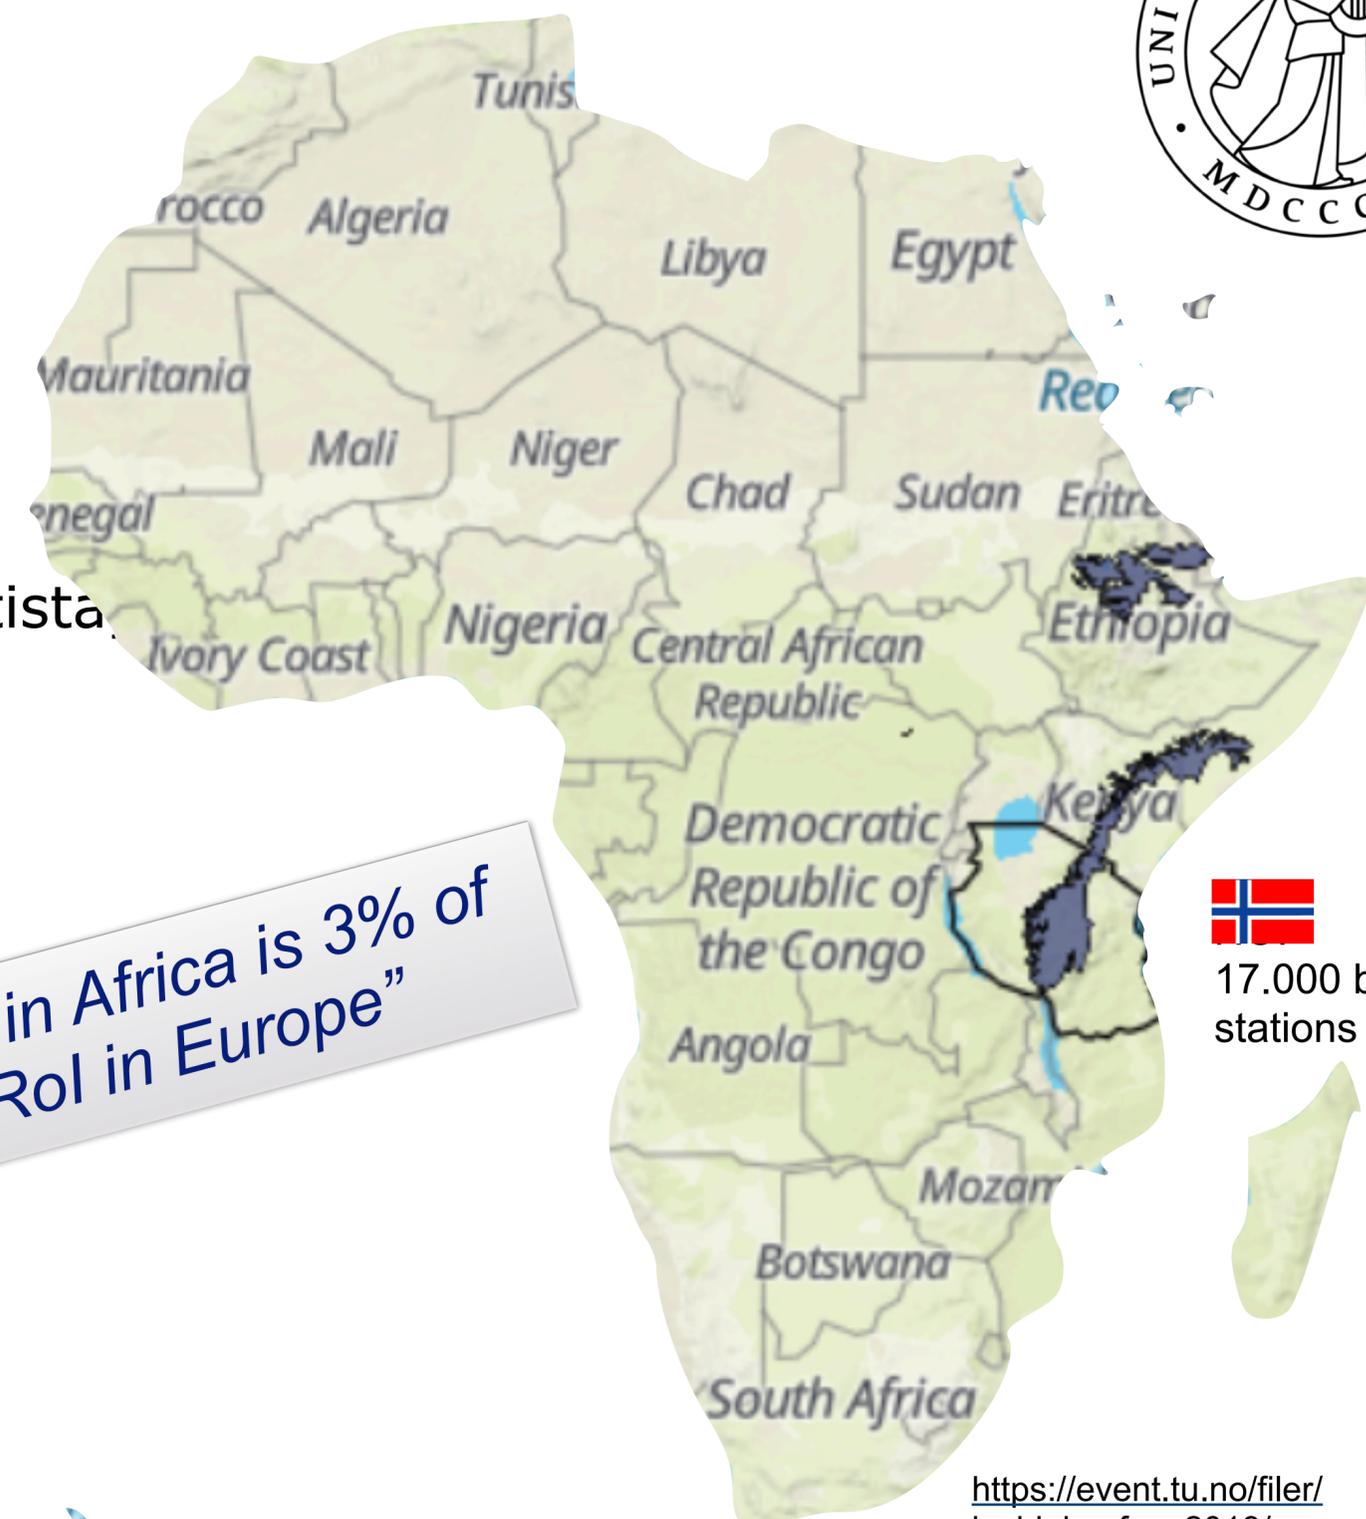

→ Example: Tanzania

- large distances (3 x size of Norway)
 - expensive access
 - negligible fixed broadband
- ability to pay: 10-20 USD/family

→ Europe vs Africa

- 6.8% vs 20% of land area
- 746 million vs 1.3 billion (2018)
- 112 vs 43 people/km² [Worldbank, Statista]

Oppsummert

→ Globale utfordringer

- Klimakrisen
- Krigen i Ukraina, Etiopia, Syria,...
- Materialier (Kobalt, Litium)
- Digital skille (Europe - Afrika)

→ "Tyven er allerede i vårt hus"

- vi trenger rammebetingelser
- og mer tillit
 - "hvor det står .no må det være .no inne"
