Check Identifier & export

- q2_answers

This table should store the collected information using *questionnaire 2* from different users. The primary key within this table is id field. This field represents a connector with other tables, such as whitelist table.

missing - export command from q1_answers, q2_answers, q3_answers to excel (Seraj)

- whitelist

In order that the user of questionnaire 1 and 2 to login into questionnaire, she should provide registered phone number on the whitelist table for a given hospital,

This table use two column as primary key, phonenumber and id, id column considered as connector with questionnaires tables

H1 30min

#

ID	Priority	Status	Where	Type	Correction	who
