21.11.2017

Components needed for prediction in Risk Analysis

- Environmental characteristics + personal characteristics

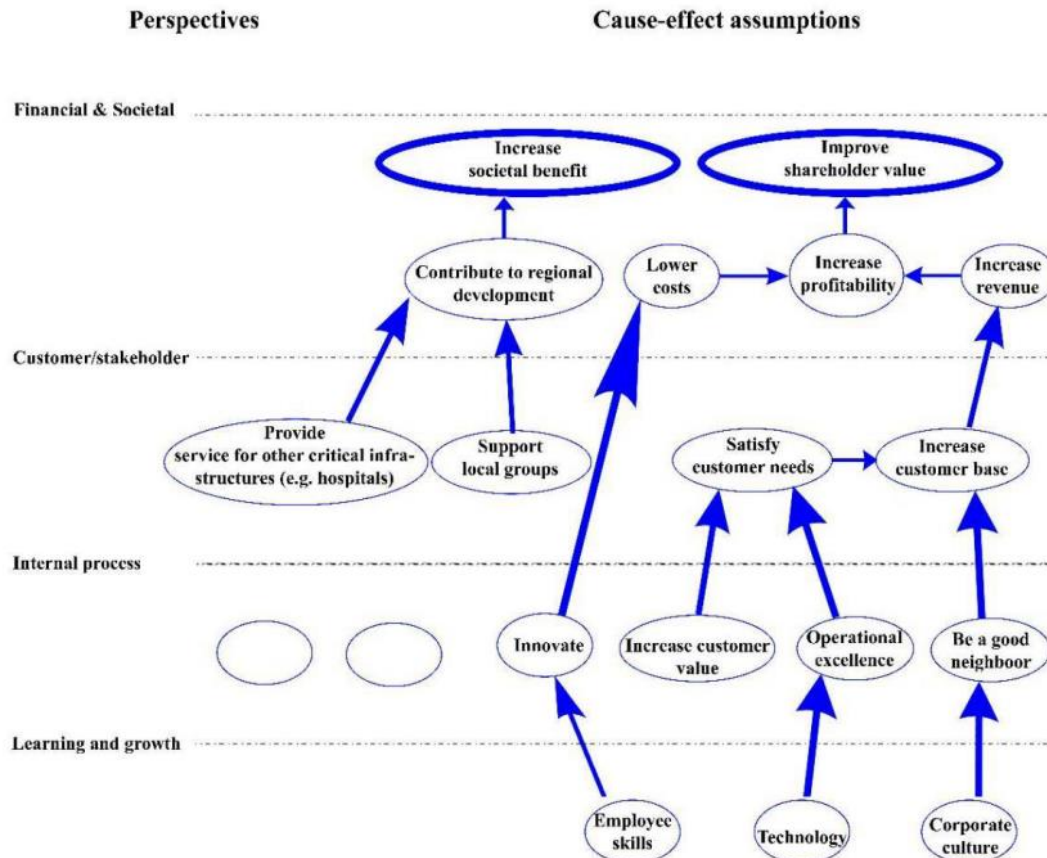

Understanding the environment 1

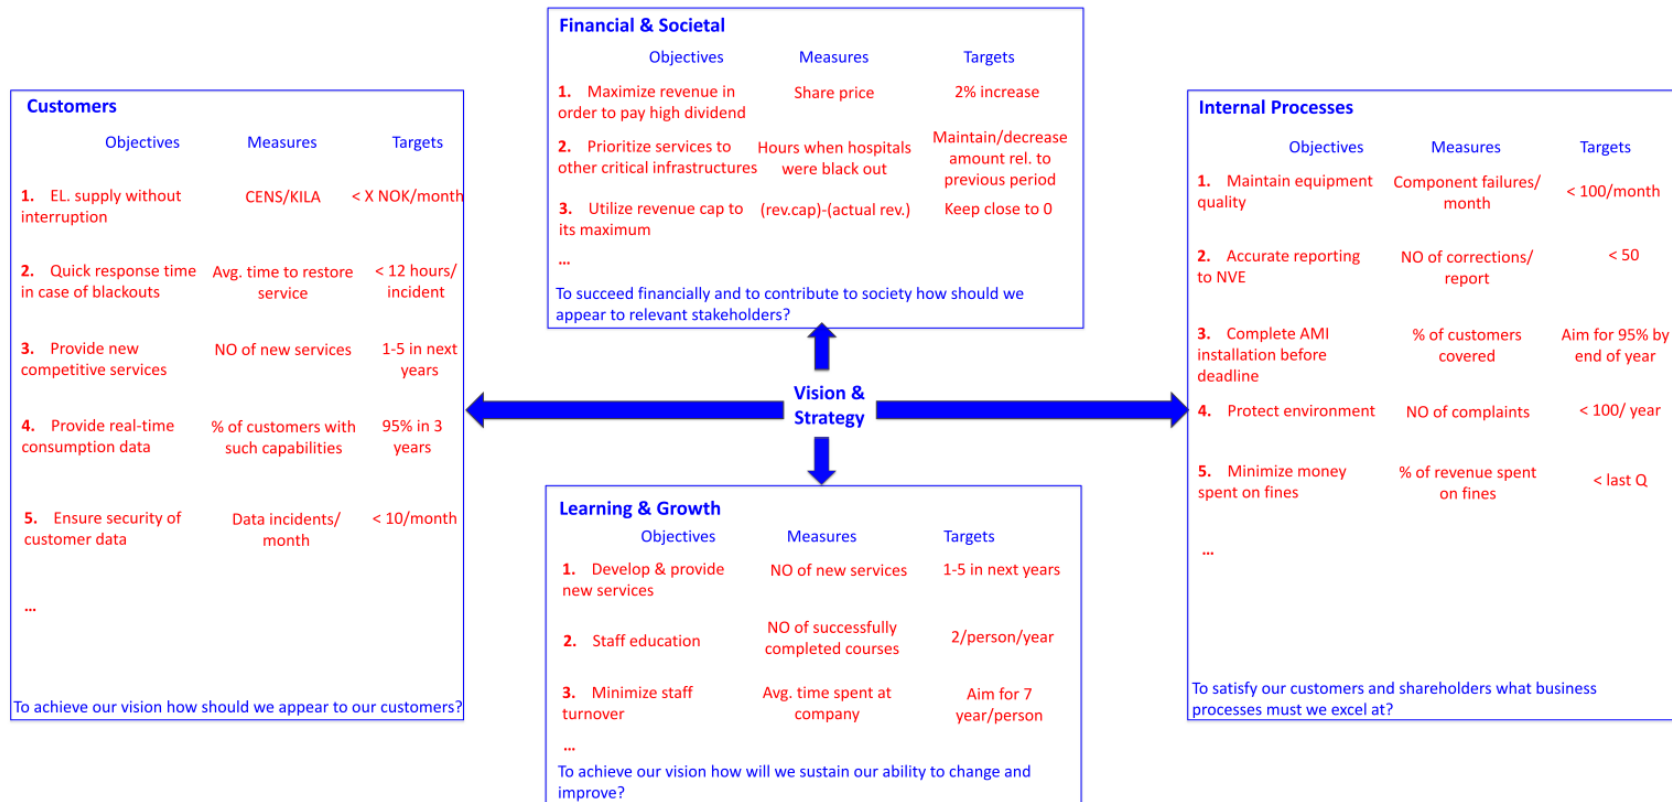

Understanding the environment 2

2. Strategy map

Understanding the environment 3

3. Balanced Scorecard

Validation or realistic input needed from DSOs

Understanding personal characteristics

- Understanding the CEOs, as key strategic decision makers
- Motivation - Value profiles
- Hypothesis: selection bias exists within the group that manifests itself through values structure

(1. different positions attract different ppl with similar value structures, 2. selection of ppl with matching values for specific jobs - increase fit from recruitment perspective)

Summary

- *Status of deliverables, scientific papers – addresses personal characteristics necessary to predict behavior*
- *Impact for Smart Grid Security Centre – BSC method can model any DSO from 130+ in Norway, enhanced understanding of decisions that CEOs might consider*
