AQI

Destination	HealthProblem	AirPollution	PAQI	Element	Value	NormalValue
St.Hanshaugan_Park	Asthma	HighlyPolluted	PAQI_2	ParticulateMatter	"33"^^<http://www.w3."0-50"^^<http://	
St.Hanshaugan_Park	Asthma	HighlyPolluted	PAQI_2	Ozone	"20"^^<http://www.w3."0-50"^^<http://	

Query: value between min, max values

personalization of context-aware visualization

1) ash value within a range

2) AQI?
$$\sqrt{\left(\frac{\text{CO}_2 \text{ actual}}{\text{CO}_2 \text{ level}}\right)^2 + (\)^2 + (\)^2}$$

3) PAQI

weighted
$$\sqrt{0.5(\)^2 + 0.7(\)^2 + 0.2(\)^2}$$

→ extension function for SPARQL

→ API

→ bind operator in SPARQL

Protigi 3.5

— OWL 1.

— open world assumption

— JENA API

— SWRL, SQWRL

→ Jena

Fuseki

(Protigi, SPARQL 1.1)

Protigi 4.3

— OWL 2.0

— closed world assumpt.

Comparison Of API

Which one to select

- OWL-API most probably easiest to use
- Protege API is the most complete, and has good compatibility with Protege
- Protege API does not need any other installations
- Protege API includes most of the Jena properties
- UNIK uses OWL-API

Web Links

- difference between Jean, Owl and Protege API:
<http://answers.semanticweb.com/questions/2568/jena-api-or-owl-api-or-protege-owl-api>
- Yoshtec suggests the Protege API, and talks about "inverse Properties seem to be filled automatically", see: <http://wiki.yoshtec.com/java-owl-api>
