Power Grid Cyber Attacks Keep the Pentagon Up at Night

A detailed look at why computers running the U.S. electrical infrastructure are so vulnerable to digital threats

By Michael McElfresh and The Conversation | June 8, 2015

The following essay is reprinted with permission from The Conversation, an online publication covering the latest research.

It's very hard to overstate how important the US power grid is to American society and its economy. Every critical infrastructure, from communications to water, is built on it and every important business function from banking to milking cows is completely dependent on it.

The Business Model of access to the Internet does not fit for SSA

- Western World
 - fixed access (home, work) 45 USD
 - mobile access 20-30 USD
- Africa
 - large distances
 - expensive access (500 USD for 5 Mbps)
 - negligible fixed broadband
 - ability to pay
