The image is a screenshot of a web browser window. The address bar shows the URL 'its-wiki.no/wiki/Digl:Scaling\_Digl\_solution\_Workshop\_with\_Digital\_Oxygen'. The page title is 'Agenda' with an '[edit]' link next to it. The main content of the page is a list of bullet points under the heading 'Main goal was to discuss scalability of the solution, addressing a.o.'.

Agenda [edit]

Main goal was to discuss scalability of the solution, addressing a.o.

- Political dimension: Mission concepts, approach & staffing, communications, strategy
- Build an organisation that allows the experts to focus on one topic
- Establish a leadership- and organisations-concept
- Create written input to vision, goals, epics, features and user stories
- Technical solution: too complicate for local self service
- Standard: how can one define a solution that is technologically viable, solved
- Financial: Current focus is on technical and political

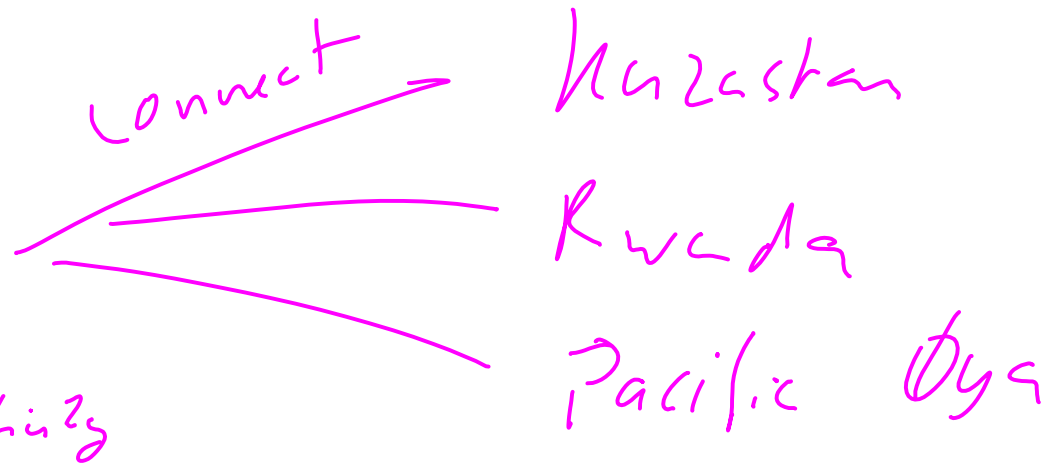

Unicef  
- List of candidates  
→ Specs

1.) in transition, heavy local point of presence, heavy, chst, AMP  
2.) access ← new infrastructure model

Unicef, ITU, World Bank

→ Connect

- 450.000 shok  
└ 150.000 connecting

- 10-20 mbt/s

its-wiki.no/wiki/BasicInternet:Solutions

The *freemium model* of access promotes *free* access to information (text, pictures and local video), and *premium* access to entertainment, games and other bandwidth-demanding content. Premium access is part of the Basic Internet solution through the sales of *vouchers*.

The diagram is divided into two parts. The left part, 'high level overview', shows 'The Internet' cloud connected to 'Internet Lite' (free access to information, premium access to broadband) and a 'Local Core Network' containing an 'Information Spot' with a 'Wifi' signal. The right part, 'detailed view of local core network', shows an 'Internet link' (IP-line/radio/fibre) connecting to a 'Local Core Network' which includes a 'Village server' and an 'LNCC' (Local Network Control Center) with a 'Wifi' signal. Handwritten pink annotations include 'Amp text, pictures' pointing to 'Internet Lite' and 'heavy video' pointing to the 'Village server'.

Figure 2: Basic Internet Infrastructure, high level overview (left) and detailed view of local core network (right)

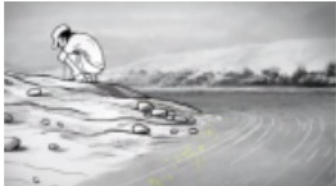

the easiest way (see Figure 2), the infrastructure consists of the local network, generating one information spot. Only the following components are used: The *Internet link* reception of the mobile broadband signal, the *local network control center* (LNCC)
