how to complete? → Semantic

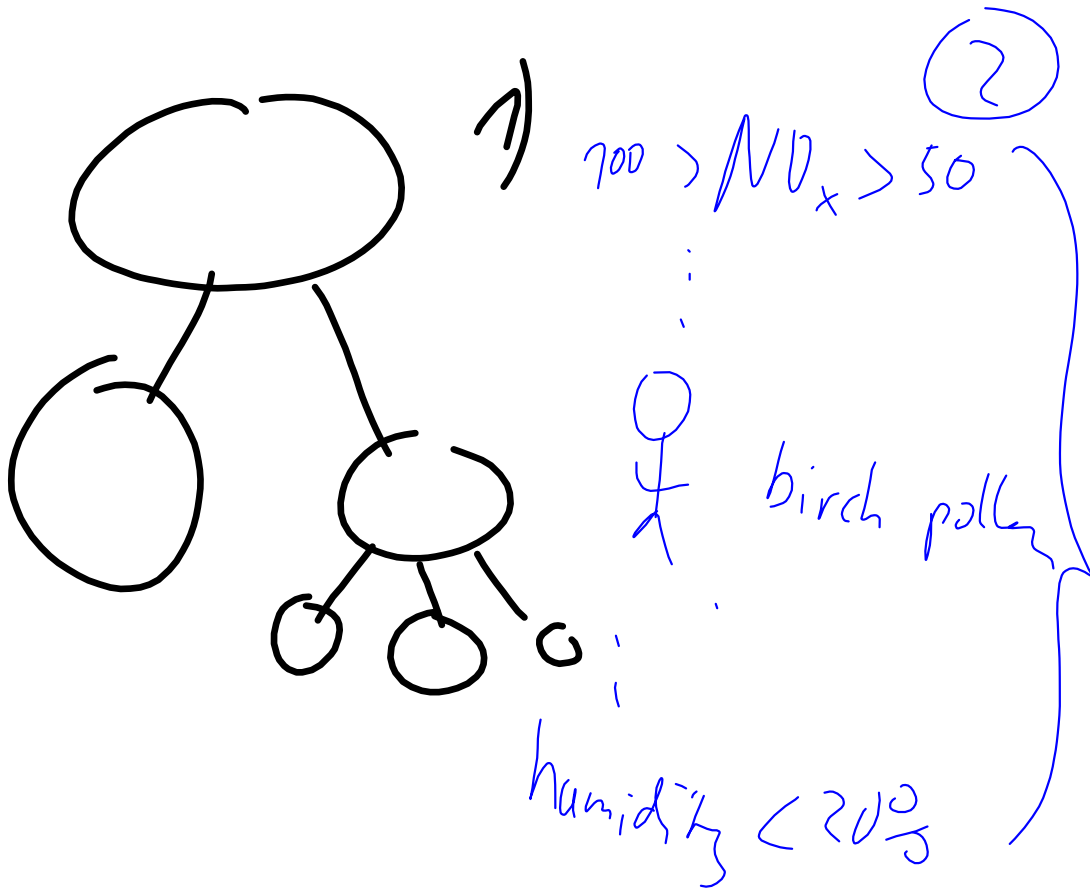

Air Quality Index ?

Air Quality Index Levels of Health Concern	Numerical Value	Meaning
Good	0-50	Air quality is considered satisfactory, and air pollution poses little or no risk.
Moderate	51-100	Air quality is acceptable; however, for some pollutants there may be a moderate health concern for a very small number of people who are unusually sensitive to air pollution.
Unhealthy for Sensitive Groups	101-150	Members of sensitive groups may experience health effects. The general public is not likely to be affected.
Unhealthy	151-200	Everyone may begin to experience health effects; members of sensitive groups may experience more serious health effects.
Very Unhealthy	201-300	Health alert: everyone may experience more serious health effects.
Hazardous	> 300	Health warnings of emergency conditions. The entire population is more likely to be affected.

A person coming late
to an event notifies
other participants

event

people

The technical solution/rules

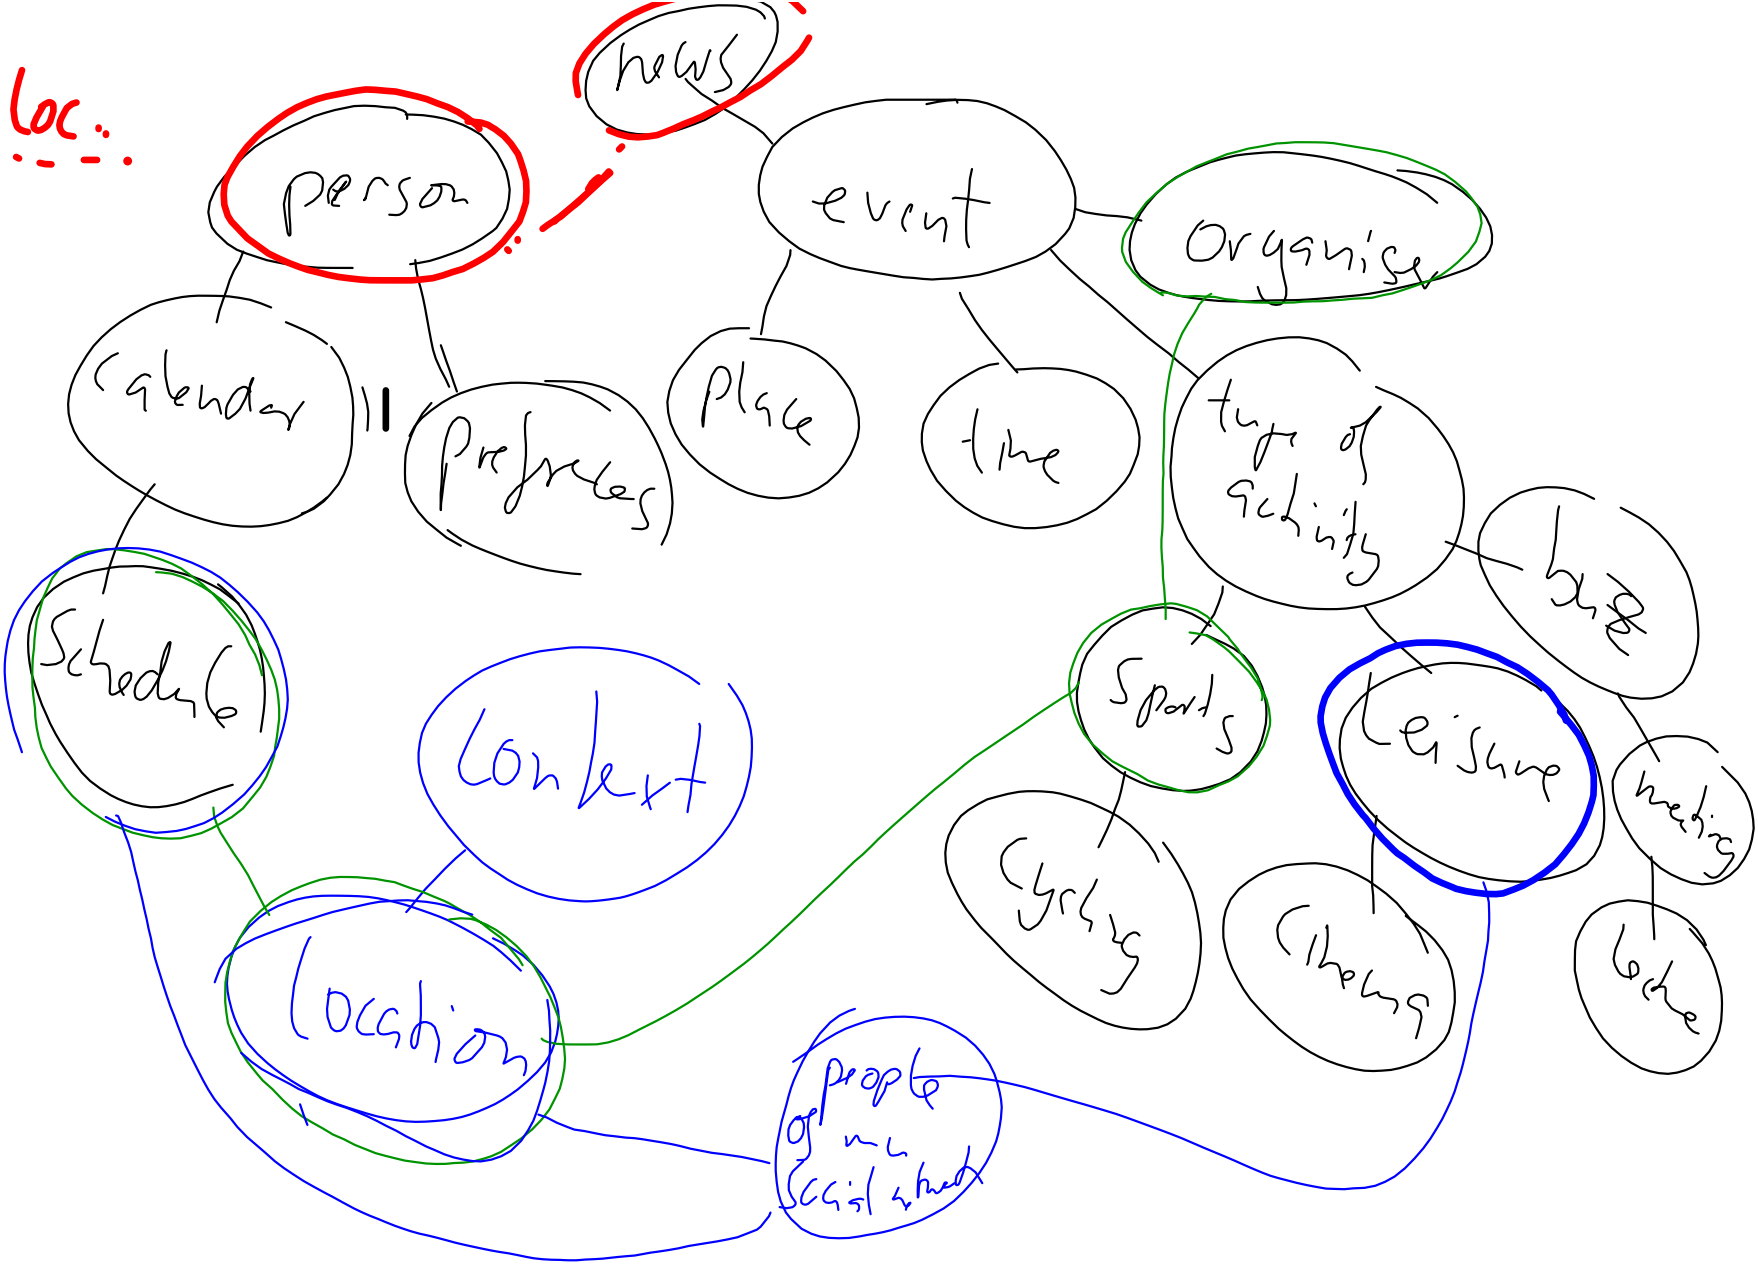

- Simple APP
- GPS
- Calendar
- Contacts
- ```
If(CurLocation != MeetingLocation){
 calculateETA(speed, distance);
 new sms(AllMeetingParticipants, ETA);
}
```
- Endless possibilities.

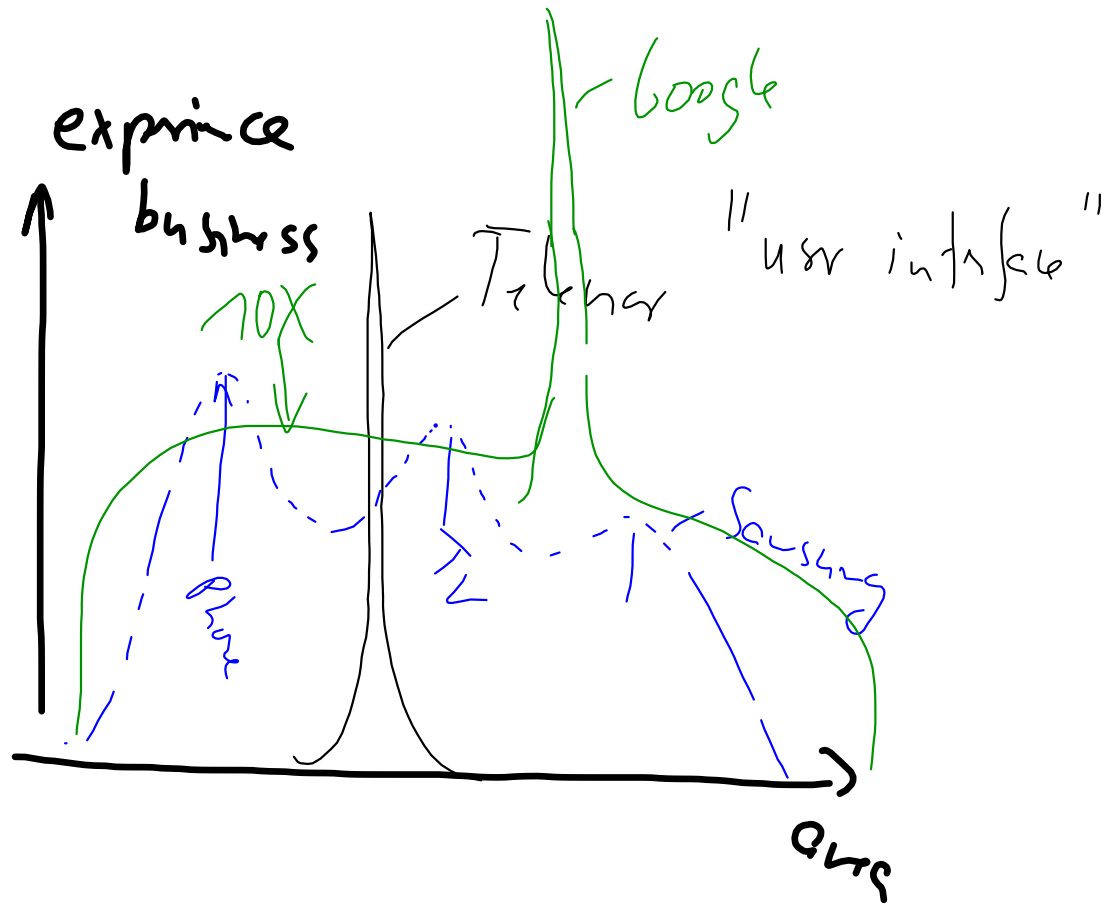

lift up  
- all participants?

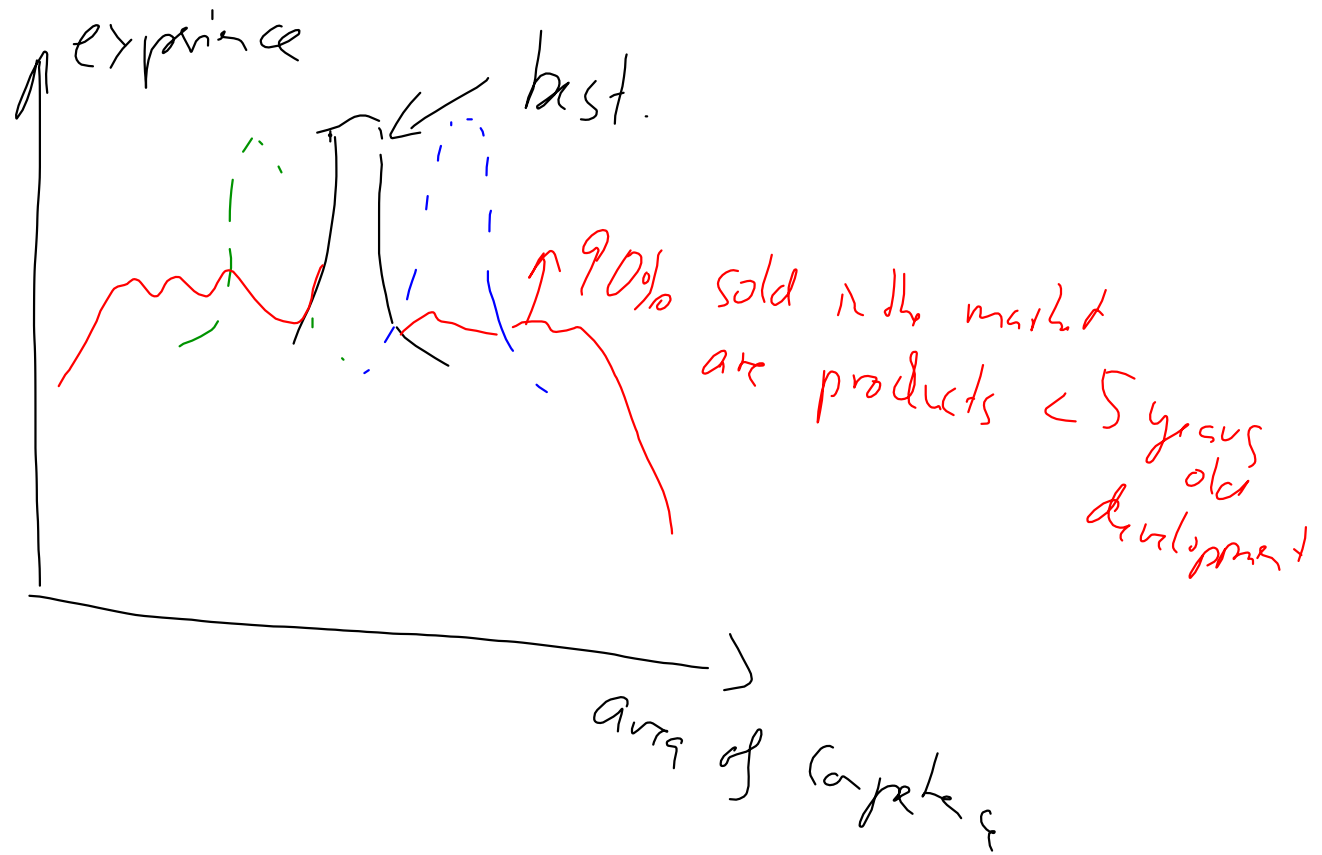

- Only those being at the event place

Example

loc.:

- 1) implementation of classes
- 2) "high level rules"
- 3) apply rules — OWL 4.3  
                                  \ "new rule standard"
- 4) common context model
