

This thesis focusses on the societal challenges related to Digital Inclusion. Though mobile networks have the potential of reaching everyone, the reality is that roughly 3.5 Billion people are not connected to the Internet. Being left-out from the Digital Society removes the capabilities for reaching higher levels of the Maslow pyramid, e.g. meaningful work.

The thesis will focus on innovation for all, based on the concept of free access to information. The hypothesis is that access to information, being text, pictures and local video, and the connectivity to a local village server will foster digital inclusion. Special attention is drawn to content fostering innovation for all, and the relation to the Sustainable Development Goals of the Agenda 2030

- 1) SDG8 "growth decent work" Bachelor task, tools ⇒ 60
- 2) transform from analogue to digital Analyse evaluate select Master task ⇒ 60
- 3) ← Task how to foster (digital) entrepreneurship? PhD topic ⇒ 60  
 ← result what the impact of free inform. access
- 4) (best praxis) Recommendation best strategies to be adopted

How?

baseline  
can I do my work

Ideal:

Literature reviewed (classic F2)  
Interview with people (Stein) (1) digital

real

① Which type he saw the way they create their ideas, text, video  
② If to get the type when his ideas

\*1 yourself through others
