

IoT Security and Privacy Functionality

IoT Security and Privacy Functionality	1
1. Security Mechanisms	8
1.1. Transport Encryption	8
1.1.1. Encrypting Communication Between System Components	9
1.1.2. Encrypting Traffic Between the System or Device and the Internet	9
1.1.3. Using Recommended and Accepted Encryption Practices and Avoiding Proprietary Protocols	9
1.1.4. Updating SSL/TLS Implementations	9
1.1.5. Properly Configuring SSL/TLS	9
1.1.6. Making a Firewall Option for the Product and Applications	9
1.1.7. Make Use of Encrypted Communication between Devices and between Devices and the Internet for all Applications are written	9
1.2. Secure, Protected and Trusted Communications and Connectivity	9
1.2.1. Information Flow Protection	10
1.2.1.1. Network Data Isolation	10
1.2.1.2. Network Segmentation	10
1.2.1.3. Gateways and Filtering	10
1.2.1.4. Network Firewalls	10
1.2.1.5. Unidirectional Gateways	10
1.2.1.6. Network Access Control	10
1.2.1.7. Using Security Gateways To Protect Legacy Endpoints, Communication and Connectivity	10
1.2.2. Communicating Endpoints Protection	10
1.2.3. Ensure that communication security is provided using state-of-the-art, standardised security protocols, such as TLS for encryption.	10
1.2.4. Ensure credentials are not exposed in internal or external network traffic. 10	
1.2.5. Guarantee data authenticity to enable reliable exchanges from data emission to data reception. Data should always be signed whenever and wherever it is captured and stored.	10
1.2.6. Verify any interconnections. Discover, identify and verify/authenticate the devices connected to the network before trust can be established, and preserve their integrity for reliable solutions and services.	11
1.2.7. Make intentional connections. Prevent unauthorised connections to it or other devices the product is connected to, at all levels of the protocols.	11
1.2.8. Disable specific ports and/or network connections for selective connectivity	11
1.2.9. Rate limiting – controlling the traffic sent or received by a network to reduce the risk of automated attacks.	11

1.3.	Securing Software/Firmware	11
1.3.1.	Including Update Capability for all System Devices and Applications	11
1.3.2.	Capability of Quick Updates when Vulnerabilities are Discovered for all System Devices and Applications	12
1.3.3.	Encrypting Update Files for all Applications	12
1.3.4.	Transmitting the Files using Encryption	12
1.3.5.	Signing Update Files and Validating by the Device before Installing	12
1.3.6.	Securing Update Servers	12
1.3.7.	Ability to Implement Scheduled Updates	12
1.3.8.	Offer an Automatic Firmware Update	12
1.3.9.	Backward Compatibility of Firmware Updates	12
1.4.	Hardware-based Security Controls	12
1.4.1.	Use of Memory Protection Units (MPUs)	13
1.4.2.	The Microcontroller (MCU)	13
1.4.3.	Considering a Trusted Platform Module (TPM) into IoT Devices	13
1.4.4.	Secure Physical Interfaces	13
1.4.5.	Guard the Supply Chain	13
1.4.6.	Use of Cryptographic Modules	13
1.4.7.	Use of Specialized Security Chips/Coprocessors	14
1.4.8.	Device Physical Protections	14
1.4.9.	Incorporate Physically Unclonable Functions (PUFs)	14
1.4.10.	Tamper Protections	14
1.4.11.	Self-Tests	14
1.4.12.	Trusted Platform Modules	14
1.5.	Securing Network Services	14
1.5.1.	All Devices Operate with Minimal Number of Network Ports Active	14
1.5.2.	Devices Do Not Make Network Ports and/or Services Available to the Internet	14
1.5.3.	Network Configuration and Management	14
1.5.4.	Network Monitoring and Analysis	14
1.6.	Cryptography Techniques	14
1.6.1.	Establishing Secure and Scalable Key Management	15
1.6.1.1.	Design Secure Bootstrap Functions	15
1.6.2.	Cryptographic Technologies to Protect Communications and Connectivity	15
1.6.2.1.	Security Controls in Communication and Connectivity Protocols	15
1.6.2.2.	Building Blocks for Protecting Exchanged Content	15
1.6.2.3.	Connectivity Standards and Security	15
1.6.2.4.	Cryptographic Protection for Different Communications and Connectivity Paradigms	15
1.6.3.	Cryptographic keys must be securely managed	15
1.6.4.	Ensure the proper selection of standard and strong encryption algorithms and strong keys, and disable insecure protocols. Verify the robustness of the implementation.	16

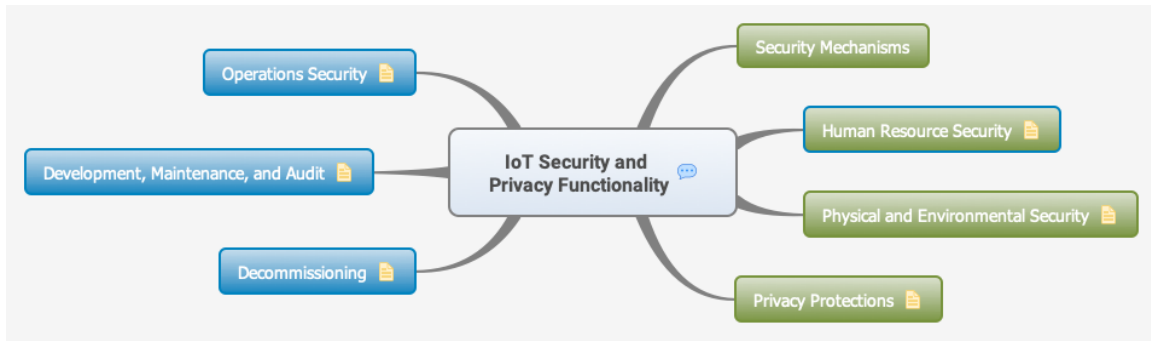

1.7.	Protecting Interfaces/APIs	16
1.7.1.	Securing Web Interface	16
1.7.1.1.	Disallowing Weak Passwords	17
1.7.1.2.	Having an Account lockout Mechanism after 3-5 Failed Login Attempts 17	
1.7.1.3.	Ability to use HTTPS to Protect Transmitted Information	17
1.7.1.4.	Employing Network Segmentation Technologies	17
1.7.1.5.	Allowing the owner to change the default username and passwords	17
1.7.1.6.	Ensuring valid user accounts can't be identified by interface error messages	17
1.7.2.	Securing Cloud Interface.....	17
1.7.2.1.	Disallowing Weak Passwords to any Cloud-based Web Interfaces	18
1.7.2.2.	Implementing two-factor Authentication for Cloud-based Web Interfaces	18
1.7.2.3.	Using Transport Encryption for all Cloud Interfaces	18
1.7.2.4.	Having the Option to Require Strong Passwords for Users	18
1.7.2.5.	Having the Option to Force Password Expiration after a Specific Period for Users	18
1.7.2.6.	Having the Option to change the default Username and Passwords for Users	18
1.7.2.7.	Including an Account Lockout Mechanism after 3-5 Failed Login Attempts for any Cloud-based Web Interface.....	18
1.7.2.8.	Ensuring valid user accounts can't be identified by interface error messages	18
1.7.3.	Securing Mobile Interface	18
1.7.3.1.	Disallowing Weak Passwords for Mobile Applications	19
1.7.3.2.	Having Account Lockout Mechanism after 3-5 Failed Login Attempts for Mobile Applications	19
1.7.3.3.	Implementing Two-Factor Authentication for Mobile Applications....	19
1.7.3.4.	Using Transport Encryption for any Mobile Applications	19
1.7.3.5.	Requiring Strong Passwords Option for Users	19
1.7.3.6.	Forcing Password Expiration Option after a Specific Period for Users	19
1.7.3.7.	Having the Change Default Username and Password Option for Users 19	
1.7.3.8.	Mobile interfaces only Collect the Minimum Amount of Personal Information Needed	19
1.7.3.9.	Ensuring valid user accounts can't be identified by interface error messages	19
1.7.4.	Error-handling.....	19
1.7.5.	Rate Limiting Technique	19
1.7.6.	Encrypting all API Communications.....	20
1.7.7.	Implement Certificate Pinning Support.....	20
1.7.8.	Embedding Timestamps	20
1.8.	Access Control.....	20

1.8.1.	Accessing Only Authorized Individuals to Collected Personal Information	20
1.8.2.	Consider Measures to Keep Unauthorized Users from Accessing a Consumer's Device, Data, or Personal Information Stored on the Network.	20
1.8.3.	Secure Authentication/ Authorization/Access Control	20
1.8.3.1.	Requiring Strong Passwords	21
1.8.3.2.	Implementing two-factor Authentication (2FA)	21
1.8.3.3.	Use Personal Identification Numbers (PINs)	21
1.8.3.4.	Use Multi-factor Authentication (MFA)	22
1.8.3.5.	Securing Password Recovery Mechanisms	22
1.8.3.6.	Option to Force Password Expiration After a Specific Period	22
1.8.3.7.	Option to Change the Default Username and Password	22
1.8.3.8.	Using Certificates for Authentication	22
1.8.3.9.	Considering Biometrics for Authentication	22
1.8.3.10.	Considering Certificate-Less Authenticated Encryption (CLAE)	22
1.8.3.11.	User Managed Access (UMA)	22
1.8.3.12.	OAuth 2.0	22
1.8.3.13.	Ensure default passwords and even default usernames are changed during the initial setup, and that weak, null or blank passwords are not allowed.	22
1.8.3.14.	Authentication credentials including but not limited to user passwords shall be salted, hashed and/or encrypted.	22
1.8.3.15.	Protect against 'brute force' and/or other abusive login attempts. This protection should also consider keys stored in devices.	22
1.8.3.16.	Ensure password recovery or reset mechanism is robust and does not supply an attacker with information indicating a valid account. The same applies to key update and recovery mechanisms.	22
1.9.	Strong Default Security	22
1.10.	System Safety and Reliability	22
1.10.1.	Mechanisms for self-diagnosis and self-repair/healing to recover from failure, malfunction or a compromised state.	23
1.10.2.	Ensure Standalone Operation	23
2.	Human Resource Security	23
2.1.	Train Employees about Importance of Security and Privacy and in Good Privacy and Security Practices and Ensure Security is Managed at an Appropriate Level in the Organization.	23
2.2.	Document and monitor the privacy and security training activities	23
2.3.	Ensure that cybersecurity roles and responsibilities for all workforce are established and introduce personnel assignments in accordance with the specifics of the projects and security engineering needs	23
3.	Physical and Environmental Security	23
3.1.	Producing the Device and Applications with a Minimal Number of Physical External Ports	24
3.1.1.	E.g. USB Ports	24

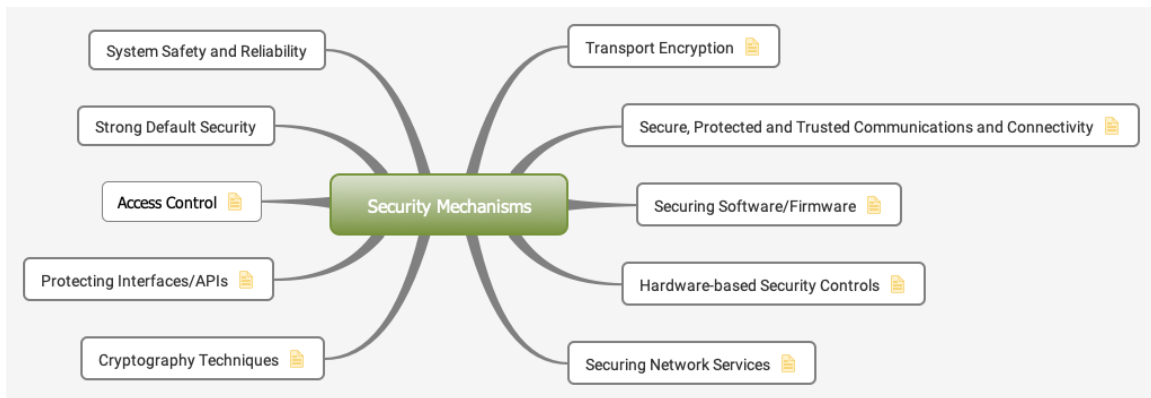

3.2.	Not Accessibility of the Firmware of Operating System via Unintended Methods	24
3.3.	Physical Security of Connections	24
3.4.	Disabling of Unused Physical Ports	25
3.4.1.	E.g. USB	25
3.5.	Tamper Resistance of Product	25
3.6.	Ensure that the device cannot be easily disassembled and that the data storage medium is encrypted at rest and cannot be easily removed.	25
3.7.	Ability to Disable External Ports	25
3.7.1.	E.g. USB	25
3.8.	Ability to Limit Administrative Capabilities in some Fashion, Possibly by only Local Interfaces for Admin Functions and Applications	25
3.9.	System Safety and Reliability	25
3.9.1.	Design with system and operational disruption in mind, preventing the system from causing unacceptable risk of injury or physical damage.	26
3.10.	Securing Test/Debug Modes	26
3.11.	Lock Down Physical Ports to Only Trusted Connections	26
4.	Privacy Protections	26
4.1.	Implement Technical Privacy Protections.....	26
4.2.	Design Opt-in Requirements for IoT Devices, Service and System Features.....	27
4.3.	Data Minimization.....	27
4.3.1.	Collecting Minimal Amount of Personal Information from Consumers.....	27
4.4.	Properly Protecting all Collected Personal Data Using Encryption at Rest and in Transit	27
4.5.	Collecting Less Sensitive Data	27
4.6.	De-identified or Anonymized Data	27
4.7.	Placing Data Retention Policy	27
4.8.	Privacy-enhanced Discovery Features/Rotating Certificates.....	27
4.9.	Analyze device use cases to support compliance mandates as necessary.....	27
4.10.	Accessing only authorized individuals to collected personal information	27
4.11.	Given a Choice for Data Collected beyond What is Needed for Proper Operation of the Device to End-users	27
4.12.	Strong Default Privacy	27
5.	Decommissioning.....	27
5.1.	Zeroization Service	28
5.2.	Certificate Revocation List (CRL) Support	28
5.3.	Extensive Calculus of Construction (CoC) Capability	28
5.4.	Having Anti Tampering Features.....	28
5.5.	Monitor the performance and patch known vulnerabilities for as long as possible during a product's lifecycle.	28
5.6.	Disclose the duration and end-of-life security and patch support (beyond product warranty).....	28
6.	Development, Maintenance, and Audit	28
6.1.	Secure Development Methodology	28

6.1.1.	Perform Threat Modeling	29
6.1.2.	Perform Safety Impact Assessment	29
6.1.3.	Peer Reviews	29
6.1.4.	Documentation	29
6.1.5.	Incorporating Security Requirements	29
6.1.6.	Feedback Loops	29
6.1.6.1.	Update of Product Design Approach upon Identification of Issues within Integration Testing	30
6.2.	Update	30
6.2.1.	Providing Secure Update Capability	30
6.2.2.	Provide Fall-back in case of update failure	30
6.3.	Implement a Secure Development and Integration Environment	30
6.3.1.	Evaluate Programming Languages	31
6.3.2.	Testing and Code Quality Processes	31
6.3.3.	Continuous Integration Plugins	31
6.4.	Privacy Protections	31
6.4.1.	Placing Data Retention Policy	31
6.5.	Information Security Policies	31
6.5.1.	Security Model and policy	32
6.5.1.1.	Data Protection	32
6.5.2.	Identity Framework and Platform Security Features	32
6.6.	Perform Security Reviews	32
6.6.1.	Static Application Security Testing (SAST)	33
6.6.2.	Dynamic Application Security Testing (DAST)	33
6.6.3.	Interactive Application Security Testing (IAST)	33
6.6.4.	Securing Web Interface	33
6.6.4.1.	Testing for Vulnerabilities	34
6.6.5.	Securing Cloud Interface	34
6.6.5.1.	Reviewing for Security Vulnerabilities	34
6.6.5.2.	Testing any Cloud-based Web Interface for Vulnerabilities	34
6.6.6.	Securing Network Services	35
6.6.6.1.	Review all Required Network Services for Vulnerabilities	35
6.6.7.	Attack Surface and Vectors	35
6.6.8.	3rd Party Library	35
6.6.9.	Fuzzing	35
6.6.10.	Customized per Threat Vector	35
6.7.	Secure Associated Applications and Services	35
6.8.	Identify Framework and Platform Security Features	35
6.8.1.	Evaluate Platform Security Features	36
7.	Operations Security	36
7.1.	Logging and Monitoring	36
7.1.1.	Providing Logging Mechanisms	36
7.1.2.	Security Monitoring and Analysis	36
7.1.2.1.	Monitor	37

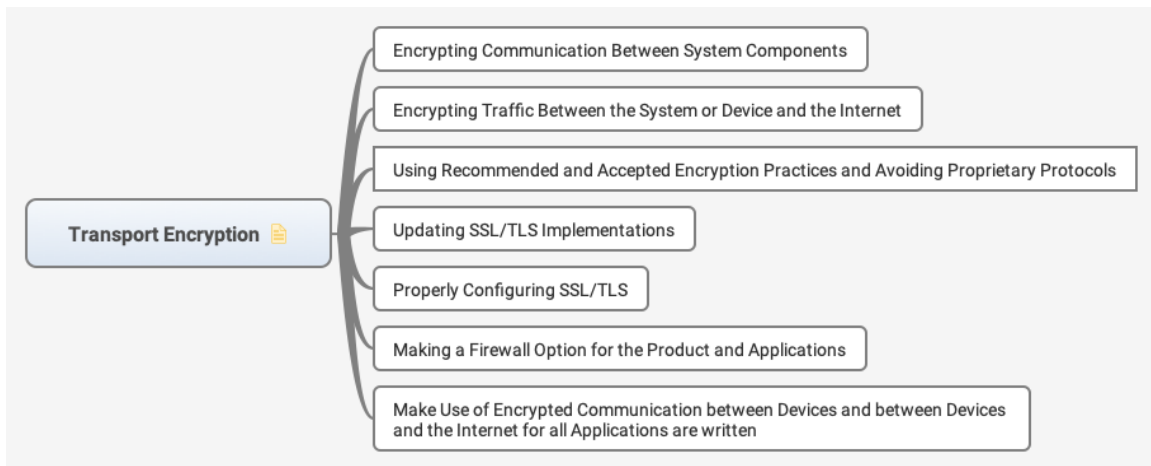

7.1.2.2.	Analyze	37
7.1.2.3.	Act.....	38
7.2.	Security Configuration and Management.....	38
7.2.1.	Including and Availability of Password Security Options for Applications ..39	
7.2.1.1.	E.g. Enabling 20 Character Passwords.....	39
7.2.1.2.	E.g. Enabling two-factor Authentication	39
7.2.2.	Including and Availability of Encryption Options for Applications.....	39
7.2.2.1.	E.g. Enabling AES-256 where AES-128 is the default setting	40
7.2.3.	Producing and Availability of Secure Logging for Security Events for all Applications	40
7.2.4.	Producing and Availability of Alerts and Notifications to the User for Security Events for all Applications	40
7.2.5.	Security Communications Channels	40
7.2.6.	Secure Operational Management	40
7.2.7.	Endpoint Configuration and Management.....	40
7.2.8.	Communications Configuration and Management	40
7.2.9.	Identity Management	40
7.2.10.	Security Model Change Control	40
7.2.11.	Configuration and Management Data Protection	40
7.2.12.	Security Model & Policy for Change Management.....	40
7.2.13.	Identify Framework and Platform Security Features.....	40
7.2.13.1.	Selecting an Integration Framework	40
7.2.14.	Properly Configuring Rebranded Devices Used as Part of a System so that Unnecessary or Unintended Services do not Remain Active after the Rebranding.....	41
7.3.	Trust and Integrity Management.....	41
7.3.1.	Establishing trust in boot environment.....	41
7.3.2.	Sign Code Cryptographically	41
7.3.3.	Implement Run-time Protection.....	41
7.3.4.	Secure Execution Monitoring	41
7.3.5.	Control the Installation of Software on Operational Systems	41
7.3.6.	Restore Secure State.....	41
7.3.7.	Use Protocols and Mechanisms Able to Represent and Manage Trust and Trust Relationships	41
7.4.	Management of Security Vulnerabilities and/or Incidents.....	41
7.4.1.	Establish procedures for analysing and handling security incidents.....	41
7.4.2.	Coordinated disclosure of vulnerabilities.....	41
7.4.3.	Participate in information sharing platforms to report vulnerabilities and receive timely and critical information about current cyber threats and vulnerabilities from public and private partners.....	42
7.4.4.	Create a publicly disclosed mechanism for vulnerability reports	42
7.4.4.1.	e.g. Bug Bounty programs	42

1. Security Mechanisms

1.1. Transport Encryption

References:

Industrial Internet of Things Volume G4: Security Framework, 2016

1.1.1. Encrypting Communication Between System Components

1.1.2. Encrypting Traffic Between the System or Device and the Internet

1.1.3. Using Recommended and Accepted Encryption Practices and Avoiding Proprietary Protocols

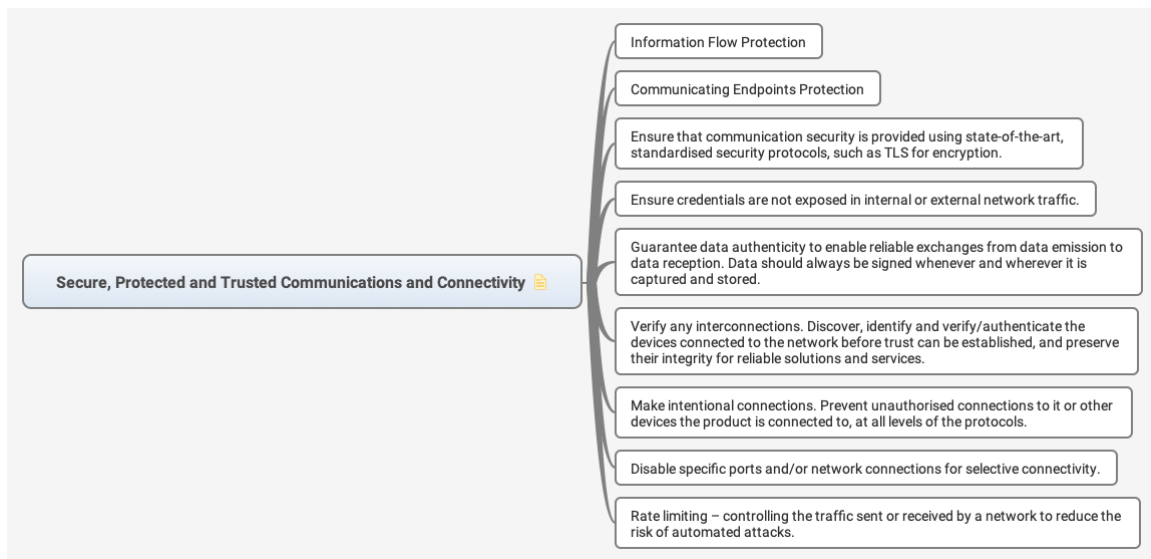

1.1.4. Updating SSL/TLS Implementations

1.1.5. Properly Configuring SSL/TLS

1.1.6. Making a Firewall Option for the Product and Applications

1.1.7. Make Use of Encrypted Communication between Devices and between Devices and the Internet for all Applications are written

1.2. Secure, Protected and Trusted Communications and Connectivity

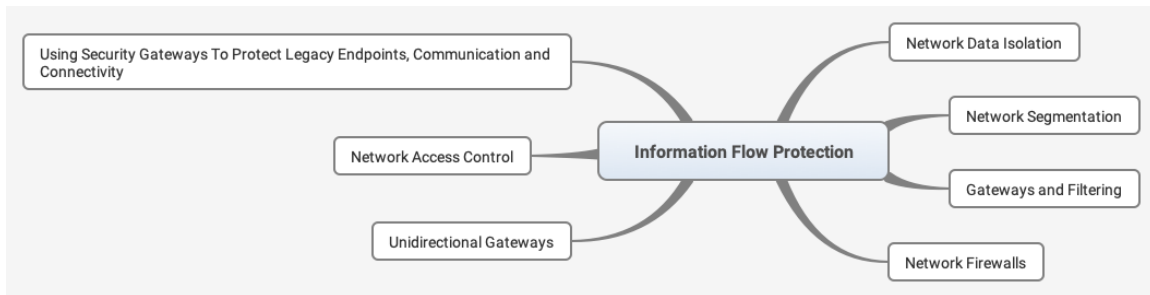

References:

https://www.owasp.org/index.php/IoT_Security_Guidance

Industrial Internet of Things Volume G4: Security Framework, 2016

1.2.1. Information Flow Protection

1.2.1.1. Network Data Isolation

1.2.1.2. Network Segmentation

1.2.1.3. Gateways and Filtering

1.2.1.4. Network Firewalls

1.2.1.5. Unidirectional Gateways

1.2.1.6. Network Access Control

1.2.1.7. Using Security Gateways To Protect Legacy Endpoints, Communication and Connectivity

1.2.2. Communicating Endpoints Protection

1.2.3. Ensure that communication security is provided using state-of-the-art, standardised security protocols, such as TLS for encryption.

1.2.4. Ensure credentials are not exposed in internal or external network traffic.

1.2.5. Guarantee data authenticity to enable reliable exchanges from data emission to data reception. Data should always be signed whenever and wherever it is captured and stored.

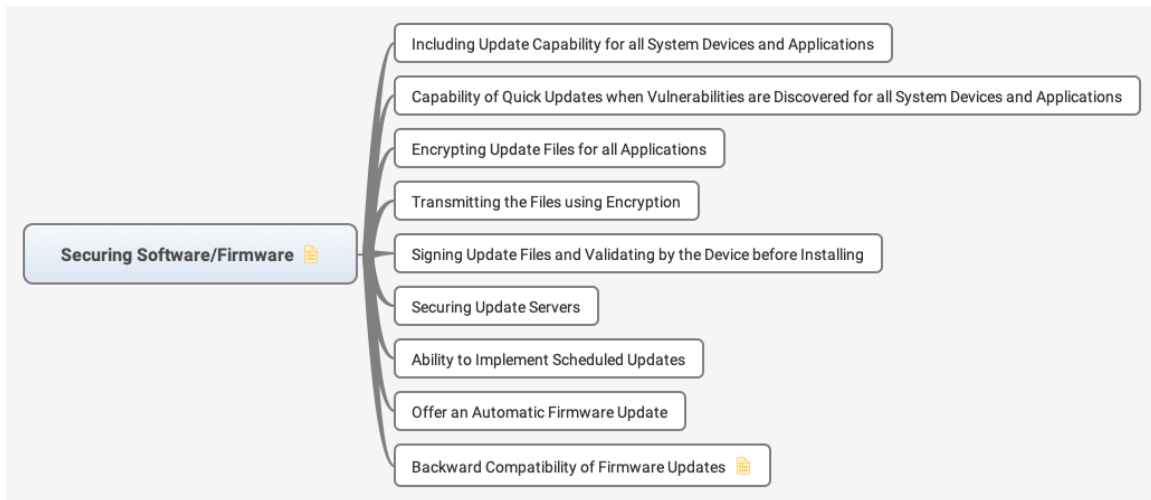

1.2.6. Verify any interconnections. Discover, identify and verify/authenticate the devices connected to the network before trust can be established, and preserve their integrity for reliable solutions and services.

1.2.7. Make intentional connections. Prevent unauthorised connections to it or other devices the product is connected to, at all levels of the protocols.

1.2.8. Disable specific ports and/or network connections for selective connectivity.

1.2.9. Rate limiting – controlling the traffic sent or received by a network to reduce the risk of automated attacks.

1.3. Securing Software/Firmware

Future-proofing the Connected World - Cloud Security Alliance, 2016

ENISA:Baseline Security Recommendations for IoT

1.3.1. Including Update Capability for all System Devices and Applications

1.3.2. Capability of Quick Updates when Vulnerabilities are Discovered for all System Devices and Applications

1.3.3. Encrypting Update Files for all Applications

1.3.4. Transmitting the Files using Encryption

1.3.5. Signing Update Files and Validating by the Device before Installing

1.3.6. Securing Update Servers

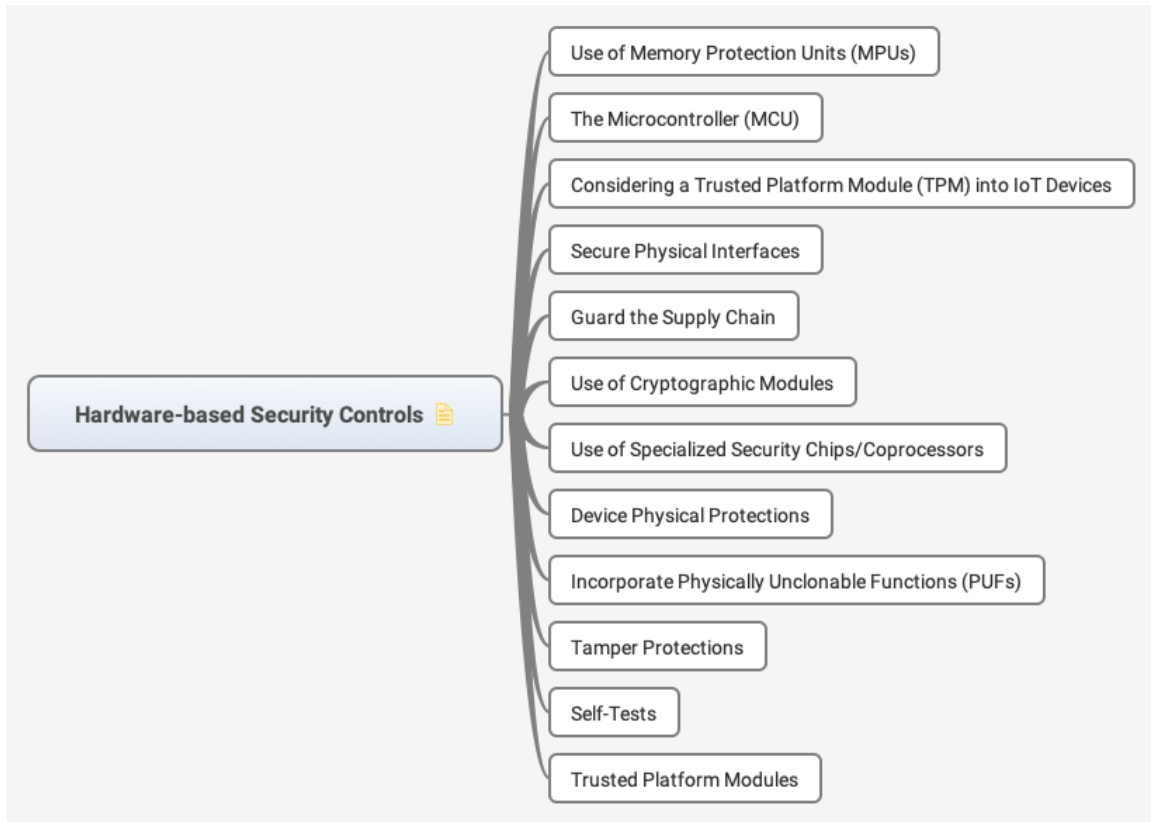

1.3.7. Ability to Implement Scheduled Updates

1.3.8. Offer an Automatic Firmware Update

1.3.9. Backward Compatibility of Firmware Updates

Automatic firmware updates should not modify user-configured preferences, security, and/or privacy settings without user notification.

1.4. Hardware-based Security Controls

https://www.owasp.org/index.php/IoT_Security_Guidance

Industrial Internet of Things Volume G4: Security Framework, 2016

Future-proofing the Connected World - Cloud Security Alliance, 2016

1.4.1. Use of Memory Protection Units (MPUs)

1.4.2. The Microcontroller (MCU)

1.4.3. Considering a Trusted Platform Module (TPM) into IoT Devices

1.4.4. Secure Physical Interfaces

1.4.5. Guard the Supply Chain

1.4.6. Use of Cryptographic Modules

1.4.7. Use of Specialized Security Chips/Coprocessors

1.4.8. Device Physical Protections

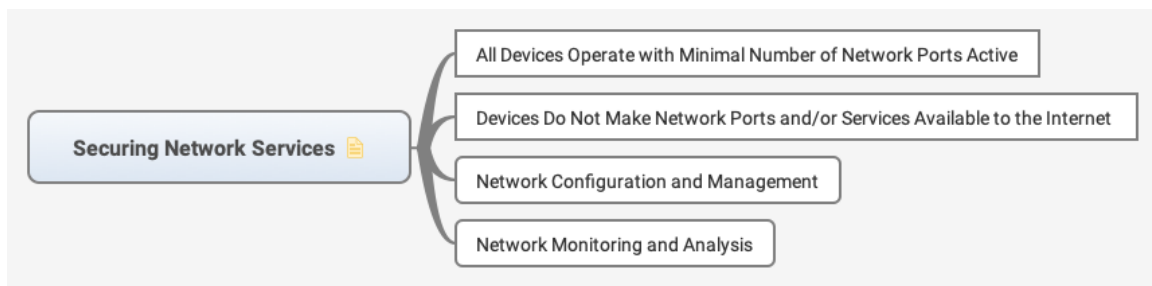

1.4.9. Incorporate Physically Unclonable Functions (PUFs)

1.4.10. Tamper Protections

1.4.11. Self-Tests

1.4.12. Trusted Platform Modules

1.5. Securing Network Services

Industrial Internet of Things Volume G4: Security Framework, 2016

Future-proofing the Connected World - Cloud Security Alliance, 2016

1.6.1. Establishing Secure and Scalable Key Management

1.6.1.1. Design Secure Bootstrap Functions

1.6.2. Cryptographic Technologies to Protect Communications and Connectivity

1.6.2.1. Security Controls in Communication and Connectivity Protocols

1.6.2.2. Building Blocks for Protecting Exchanged Content

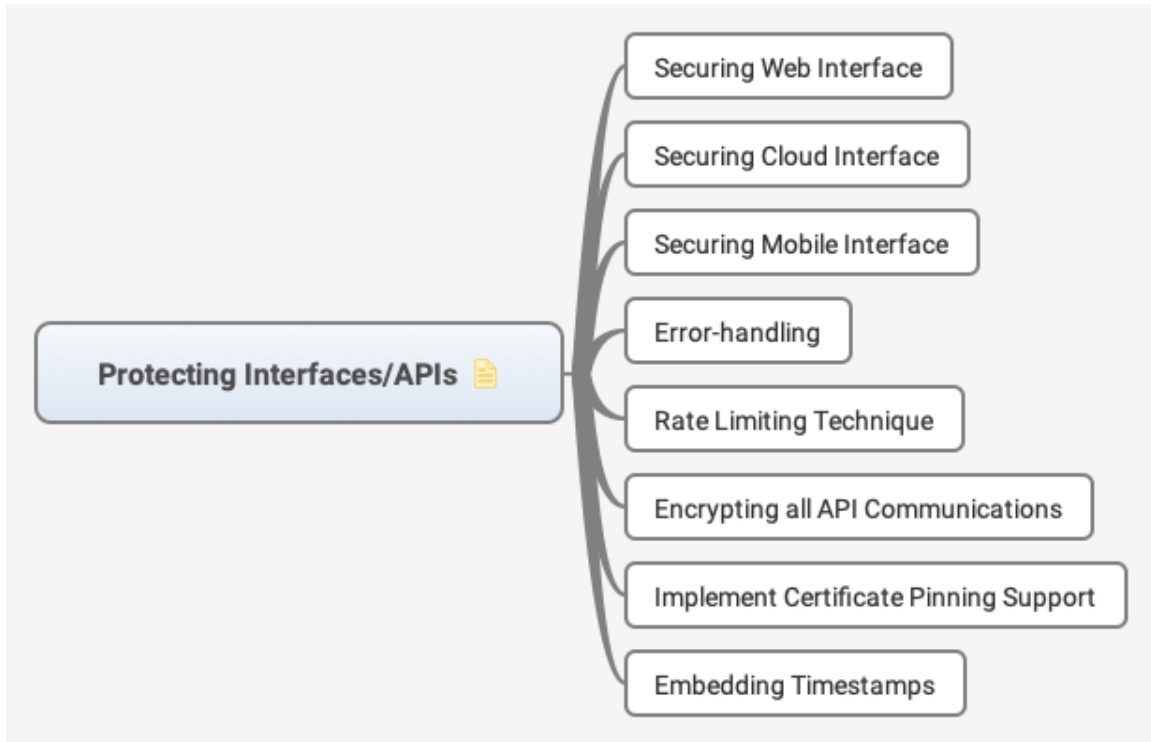

1.6.2.3. Connectivity Standards and Security

1.6.2.4. Cryptographic Protection for Different Communications and Connectivity Paradigms

1.6.3. Cryptographic keys must be securely managed

1.6.4. Ensure the proper selection of standard and strong encryption algorithms and strong keys, and disable insecure protocols. Verify the robustness of the implementation.

1.7. Protecting Interfaces/APIs

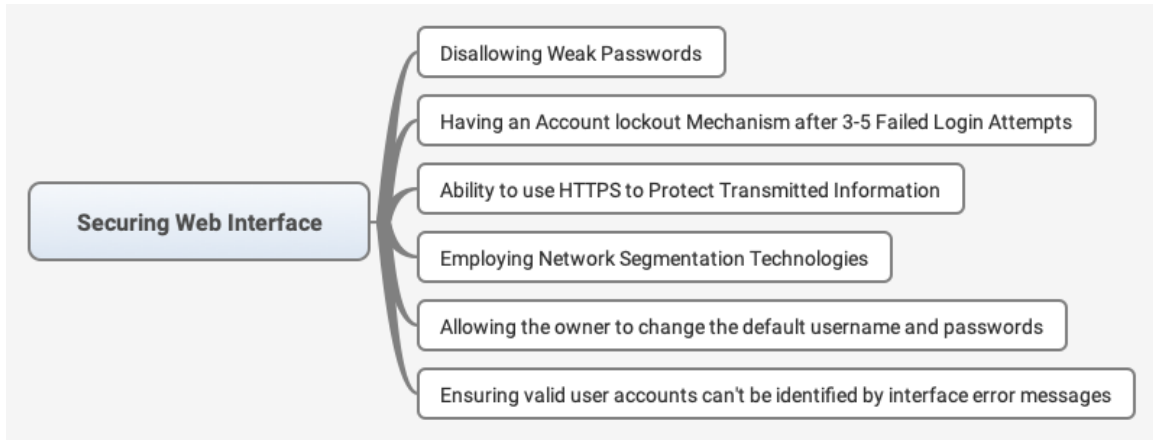

References:

https://www.owasp.org/index.php/IoT_Security_Guidance

Industrial Internet of Things Volume G4: Security Framework, 2016

Future-proofing the Connected World - Cloud Security Alliance, 2016

1.7.1. Securing Web Interface

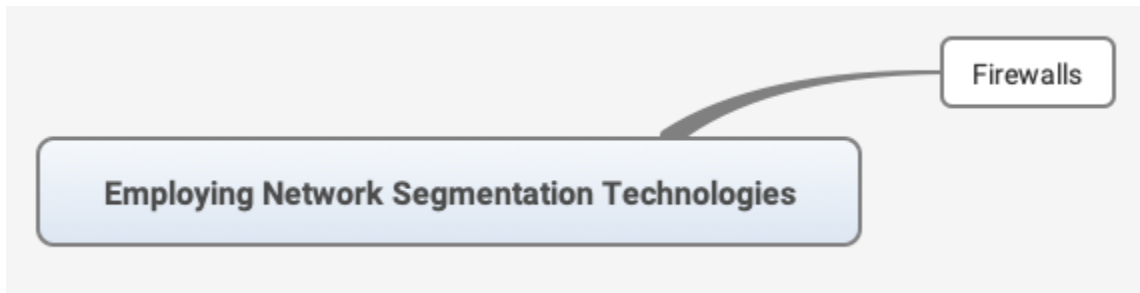

1.7.1.1. Disallowing Weak Passwords

1.7.1.2. Having an Account lockout Mechanism after 3-5 Failed Login Attempts

1.7.1.3. Ability to use HTTPS to Protect Transmitted Information

1.7.1.4. Employing Network Segmentation Technologies

Firewalls

1.7.1.5. Allowing the owner to change the default username and passwords

1.7.1.6. Ensuring valid user accounts can't be identified by interface error messages

1.7.2. Securing Cloud Interface

1.7.2.1. Disallowing Weak Passwords to any Cloud-based Web Interfaces

1.7.2.2. Implementing two-factor Authentication for Cloud-based Web Interfaces

1.7.2.3. Using Transport Encryption for all Cloud Interfaces

1.7.2.4. Having the Option to Require Strong Passwords for Users

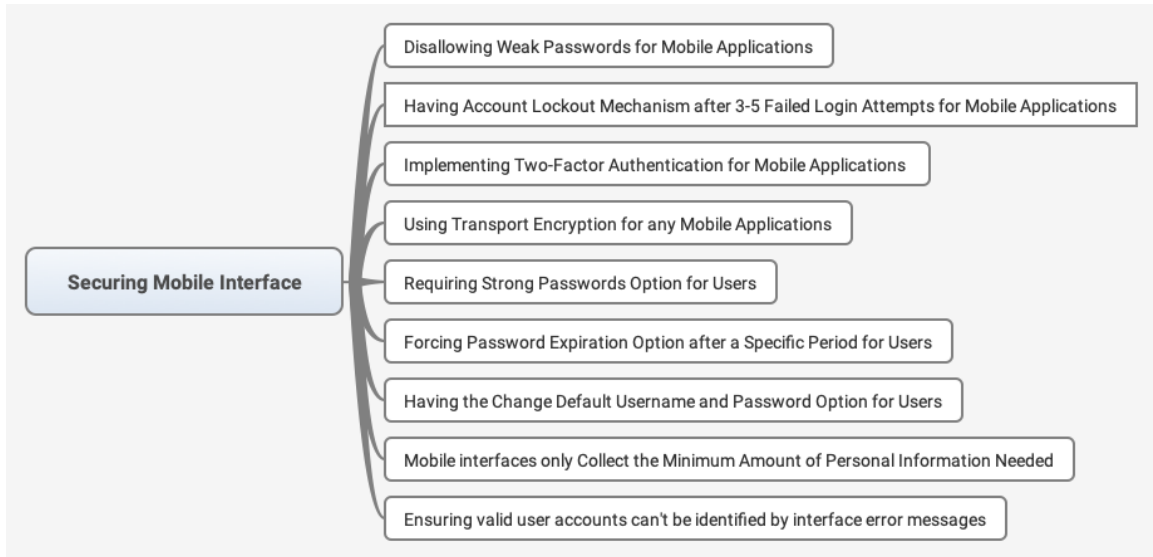

1.7.2.5. Having the Option to Force Password Expiration after a Specific Period for Users

1.7.2.6. Having the Option to change the default Username and Passwords for Users

1.7.2.7. Including an Account Lockout Mechanism after 3-5 Failed Login Attempts for any Cloud-based Web Interface

1.7.2.8. Ensuring valid user accounts can't be identified by interface error messages

1.7.3. Securing Mobile Interface

1.7.3.1. Disallowing Weak Passwords for Mobile Applications

1.7.3.2. Having Account Lockout Mechanism after 3-5 Failed Login Attempts for Mobile Applications

1.7.3.3. Implementing Two-Factor Authentication for Mobile Applications

1.7.3.4. Using Transport Encryption for any Mobile Applications

1.7.3.5. Requiring Strong Passwords Option for Users

1.7.3.6. Forcing Password Expiration Option after a Specific Period for Users

1.7.3.7. Having the Change Default Username and Password Option for Users

1.7.3.8. Mobile interfaces only Collect the Minimum Amount of Personal Information Needed

1.7.3.9. Ensuring valid user accounts can't be identified by interface error messages

1.7.4. Error-handling

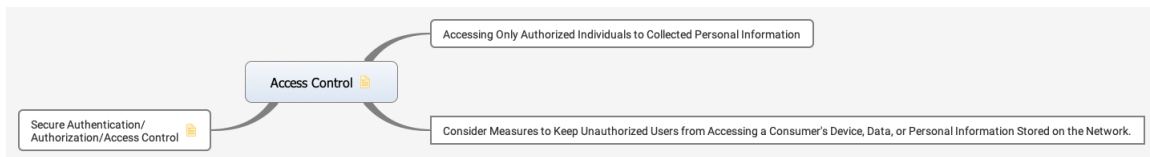

1.7.5. Rate Limiting Technique

1.7.6. Encrypting all API Communications

1.7.7. Implement Certificate Pinning Support

1.7.8. Embedding Timestamps

1.8. Access Control

According to ISO27001

According to definitions of ISO27000 access control means to ensure that access to assets is authorized and restricted based on business and security requirements.

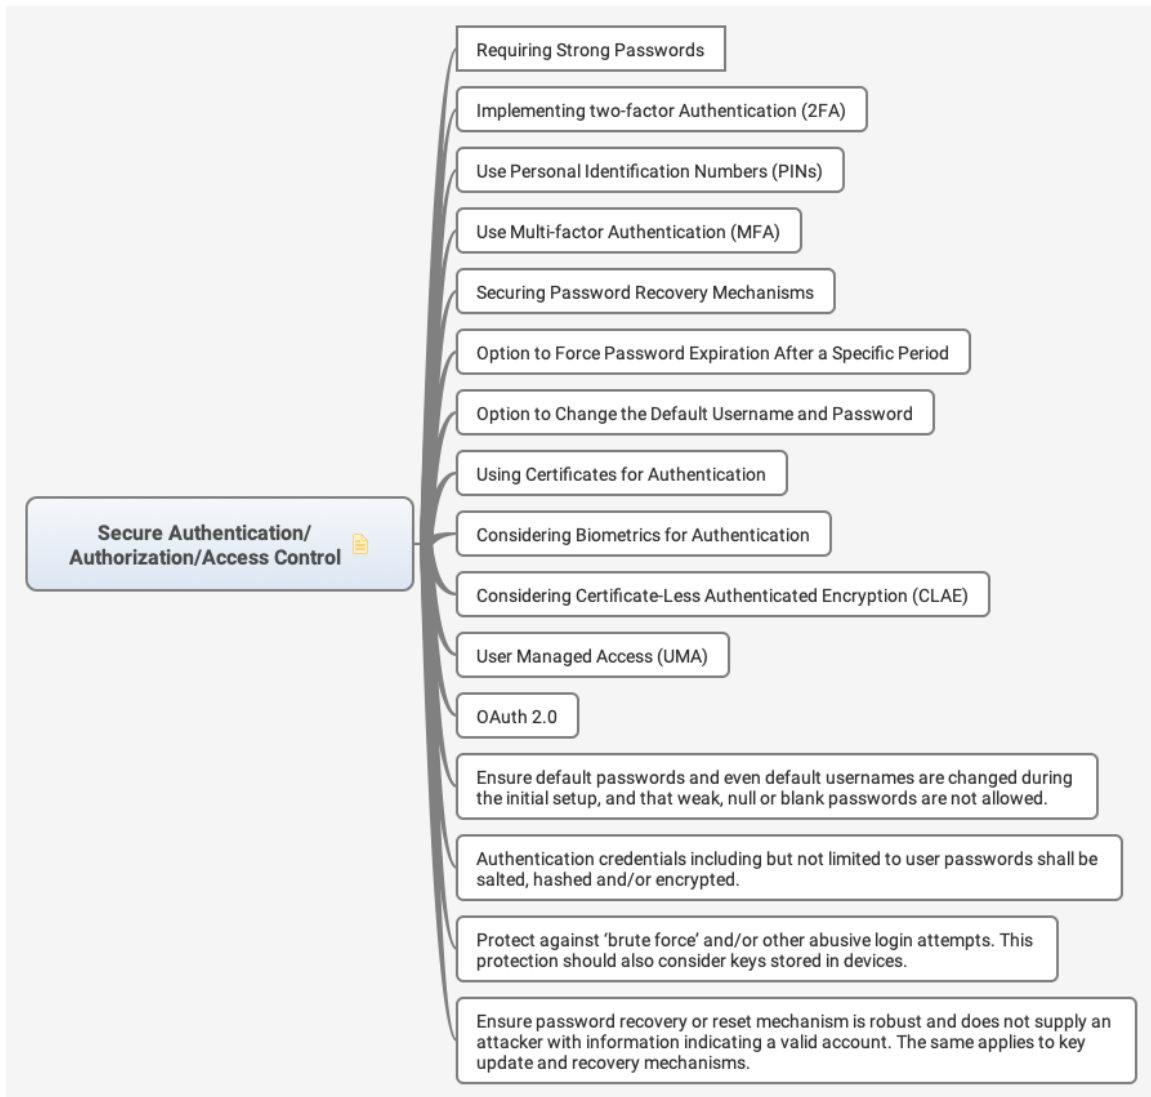

Objectives: (according to ISO27001 and ISO27002)

1. To limit access to information and information processing facilities.
2. To ensure authorized user access and to prevent unauthorized access to systems and services.
3. To make users accountable for safeguarding their authentication information.
4. To prevent unauthorized access to systems and applications.

1.8.1. Accessing Only Authorized Individuals to Collected Personal Information

1.8.2. Consider Measures to Keep Unauthorized Users from Accessing a Consumer's Device, Data, or Personal Information Stored on the Network.

1.8.3. Secure Authentication/ Authorization/Access Control

References:

https://www.owasp.org/index.php/IoT_Security_Guidance

Industrial Internet of Things Volume G4: Security Framework, 2016

Future-proofing the Connected World - Cloud Security Alliance, 2016

1.8.3.1. Requiring Strong Passwords

1.8.3.2. Implementing two-factor Authentication (2FA)

1.8.3.3. Use Personal Identification Numbers (PINs)

1.8.3.4. Use Multi-factor Authentication (MFA)

1.8.3.5. Securing Password Recovery Mechanisms

1.8.3.6. Option to Force Password Expiration After a Specific Period

1.8.3.7. Option to Change the Default Username and Password

1.8.3.8. Using Certificates for Authentication

1.8.3.9. Considering Biometrics for Authentication

1.8.3.10. Considering Certificate-Less Authenticated Encryption (CLAE)

1.8.3.11. User Managed Access (UMA)

1.8.3.12. OAuth 2.0

1.8.3.13. Ensure default passwords and even default usernames are changed during the initial setup, and that weak, null or blank passwords are not allowed.

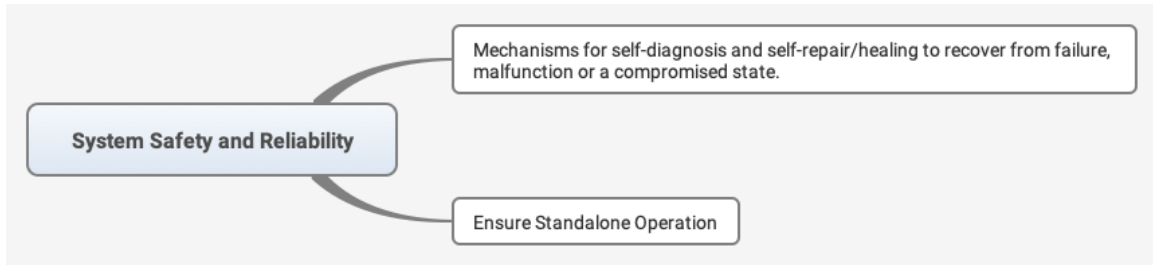

1.8.3.14. Authentication credentials including but not limited to user passwords shall be salted, hashed and/or encrypted.

1.8.3.15. Protect against 'brute force' and/or other abusive login attempts. This protection should also consider keys stored in devices.

1.8.3.16. Ensure password recovery or reset mechanism is robust and does not supply an attacker with information indicating a valid account. The same applies to key update and recovery mechanisms.

1.9. Strong Default Security

1.10. System Safety and Reliability

1.10.1. Mechanisms for self-diagnosis and self-repair/healing to recover from failure, malfunction or a compromised state.

1.10.2. Ensure Standalone Operation

2. Human Resource Security

According to ISO27001

2.1. Train Employees about Importance of Security and Privacy and in Good Privacy and Security Practices and Ensure Security is Managed at an Appropriate Level in the Organization

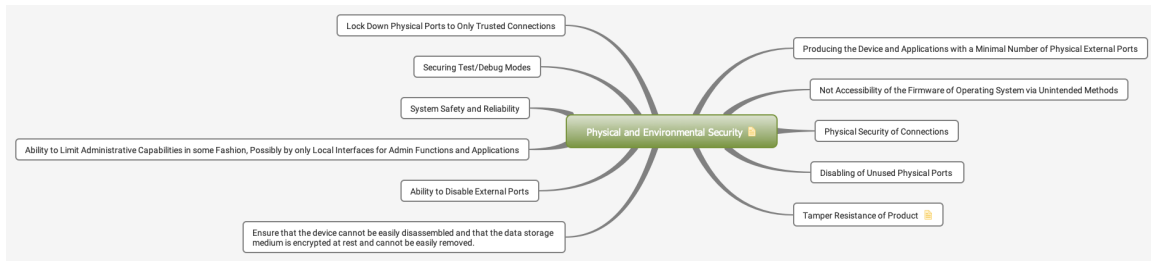

2.2. Document and monitor the privacy and security training activities

Reference: ENISA Baseline Security Recommendations for IoT

2.3. Ensure that cybersecurity roles and responsibilities for all workforce are established and introduce personnel assignments in accordance with the specifics of the projects and security engineering needs

Reference: ENISA Baseline Security Recommendations for IoT

3. Physical and Environmental Security

According to ISO27001

According to ISO27002 and ISO27001

Objectives of physical and environmental security are included:

1. To prevent unauthorized physical access, damage, and interference to the organization's premises and information. Critical or sensitive information processing facilities should be housed in secure areas, protected by defined security perimeters, with appropriate security barriers and entry controls. They should be physically protected from unauthorized access, damage, and interference. The protection provided should be commensurate with the identified risks.
2. To prevent loss, damage, theft or compromise of assets and interruption to the organization's operations.
3. To prevent loss, damage, theft or compromise of assets and interruption to the organization's activities. Equipment should be protected from physical and environmental threats. Protection of equipment (including that used off-site, and the removal of property) is necessary to reduce the risk of unauthorized access to information and to protect against loss or damage. This should also consider equipment siting and disposal. Special controls may be required to protect against physical threats, and to safeguard supporting facilities, such as the electrical supply and cabling infrastructure.

3.1. Producing the Device and Applications with a Minimal Number of Physical External Ports

3.1.1. E.g. USB Ports

3.2. Not Accessibility of the Firmware of Operating System via Unintended Methods

3.3. Physical Security of Connections

3.4. Disabling of Unused Physical Ports

3.4.1. E.g. USB

3.5. Tamper Resistance of Product

Detection and reaction to hardware tampering should not rely on network connectivity.

3.6. Ensure that the device cannot be easily disassembled and that the data storage medium is encrypted at rest and cannot be easily removed.

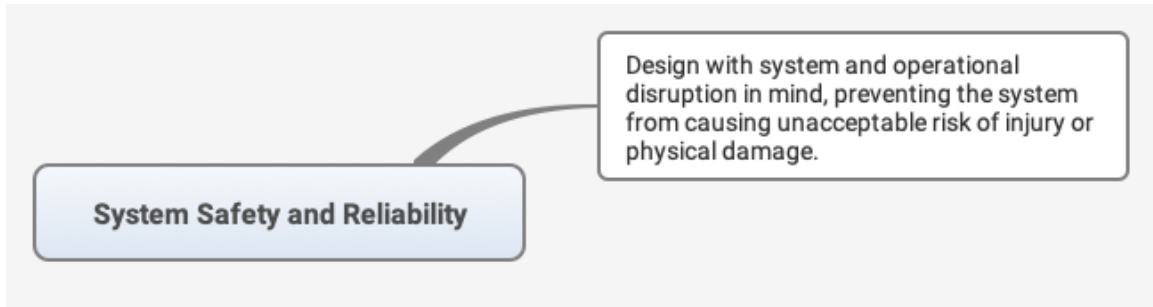

3.7. Ability to Disable External Ports

3.7.1. E.g. USB

3.8. Ability to Limit Administrative Capabilities in some Fashion, Possibly by only Local Interfaces for Admin Functions and Applications

3.9. System Safety and Reliability

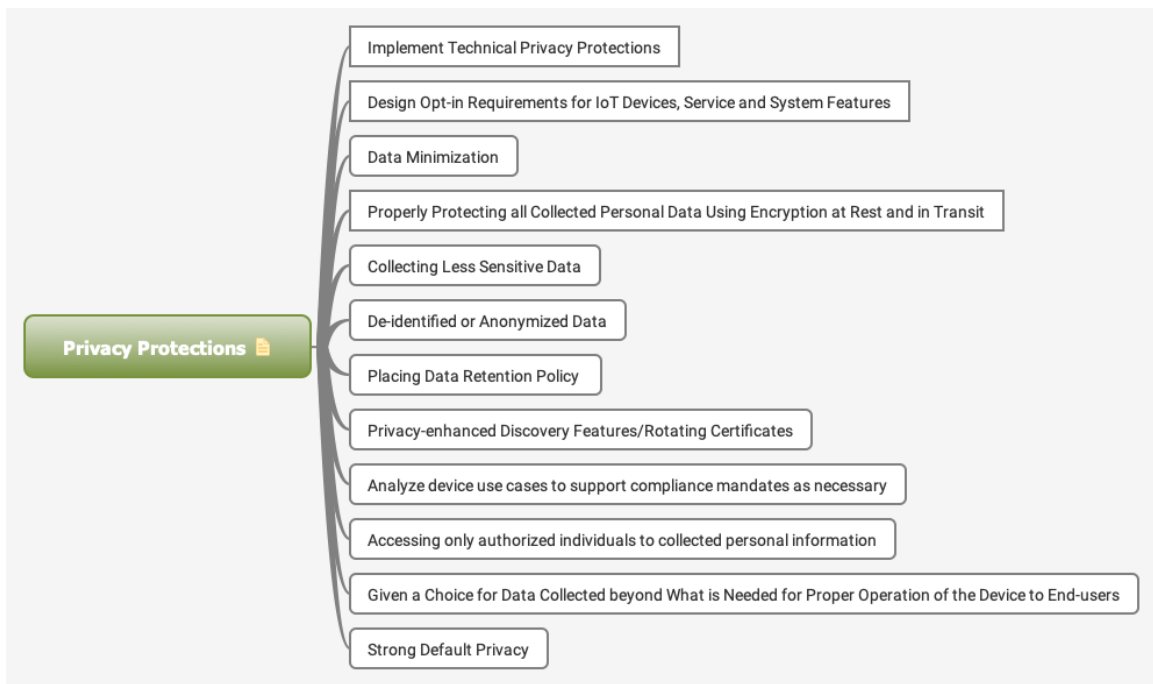

3.9.1. Design with system and operational disruption in mind, preventing the system from causing unacceptable risk of injury or physical damage.

3.10. Securing Test/Debug Modes

3.11. Lock Down Physical Ports to Only Trusted Connections

4. Privacy Protections

Future-proofing the Connected World - Cloud Security Alliance

4.1. Implement Technical Privacy Protections

4.2. Design Opt-in Requirements for IoT Devices, Service and System Features

4.3. Data Minimization

4.3.1. Collecting Minimal Amount of Personal Information from Consumers

4.4. Properly Protecting all Collected Personal Data Using Encryption at Rest and in Transit

4.5. Collecting Less Sensitive Data

4.6. De-identified or Anonymized Data

4.7. Placing Data Retention Policy

4.8. Privacy-enhanced Discovery Features/Rotating Certificates

4.9. Analyze device use cases to support compliance mandates as necessary

4.10. Accessing only authorized individuals to collected personal information

4.11. Given a Choice for Data Collected beyond What is Needed for Proper Operation of the Device to End-users

4.12. Strong Default Privacy

5. Decommissioning

References:

5.1. Zeroization Service

5.2. Certificate Revocation List (CRL) Support

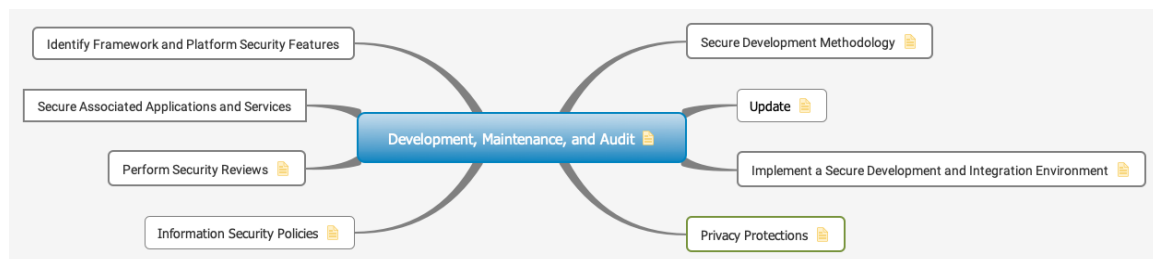

5.3. Extensive Calculus of Construction (CoC) Capability

5.4. Having Anti Tampering Features

5.5. Monitor the performance and patch known vulnerabilities for as long as possible during a product's lifecycle.

5.6. Disclose the duration and end-of-life security and patch support (beyond product warranty).

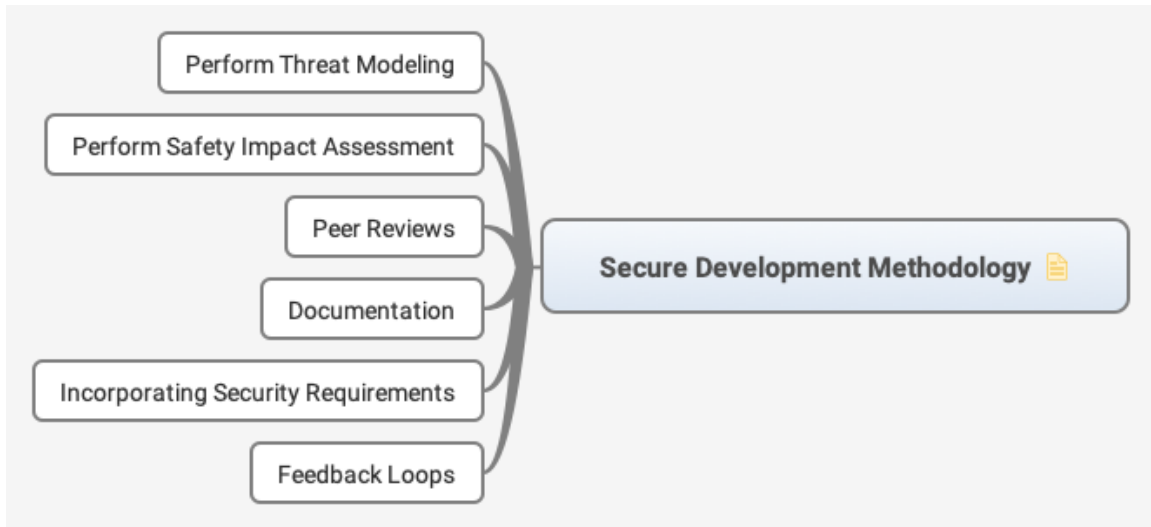

6. Development, Maintenance, and Audit

According to ISO27001

"Conduct periodic audits and reviews of security controls to ensure that the controls are effective. Perform penetration tests at least biannually. Reference: ENISA Baseline Security Recommendations for IoT"

6.6.2. Dynamic Application Security Testing (DAST)

6.6.3. Interactive Application Security Testing (IAST)

6.6.4. Securing Web Interface

6.6.4.1. Testing for Vulnerabilities

XSS

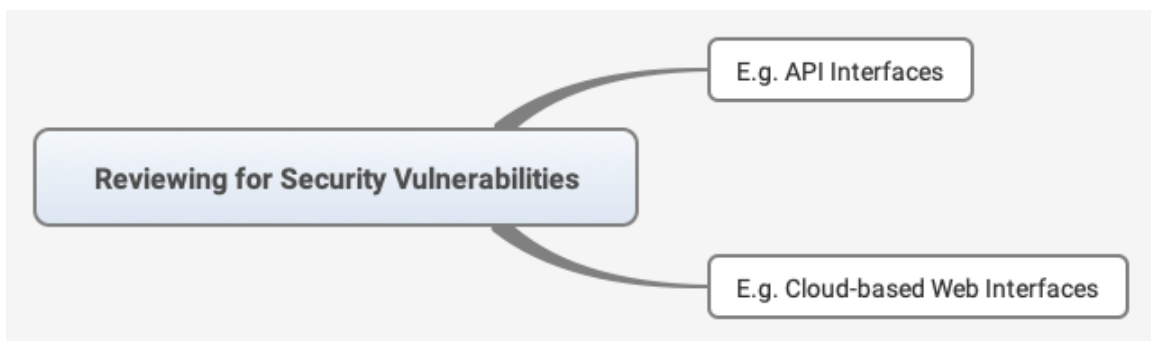

SQLi

CSRF

6.6.5. Securing Cloud Interface

6.6.5.1. Reviewing for Security Vulnerabilities

E.g. API Interfaces

E.g. Cloud-based Web Interfaces

6.6.5.2. Testing any Cloud-based Web Interface for Vulnerabilities

XSS

SQLi

CSRF

6.6.6. Securing Network Services

6.6.6.1. Review all Required Network Services for Vulnerabilities

6.6.7. Attack Surface and Vectors

6.6.8. 3rd Party Library

6.6.9. Fuzzing

6.6.10. Customized per Threat Vector

6.7. Secure Associated Applications and Services

6.8. Identify Framework and Platform Security Features

6.8.1. Evaluate Platform Security Features

7. Operations Security

According to ISO27001

7.1. Logging and Monitoring

7.2.1. Including and Availability of Password Security Options for Applications

7.2.1.1. E.g. Enabling 20 Character Passwords

7.2.1.2. E.g. Enabling two-factor Authentication

7.2.2. Including and Availability of Encryption Options for Applications

Including and Availability of Encryption Options for Applications

E.g. Enabling AES-256 where AES-128 is the default setting

7.2.2.1. E.g. Enabling AES-256 where AES-128 is the default setting

7.2.3. Producing and Availability of Secure Logging for Security Events for all Applications

7.2.4. Producing and Availability of Alerts and Notifications to the User for Security Events for all Applications

7.2.5. Security Communications Channels

7.2.6. Secure Operational Management

7.2.7. Endpoint Configuration and Management

7.2.8. Communications Configuration and Management

7.2.9. Identity Management

7.2.10. Security Model Change Control

7.2.11. Configuration and Management Data Protection

7.2.12. Security Model & Policy for Change Management

7.2.13. Identify Framework and Platform Security Features

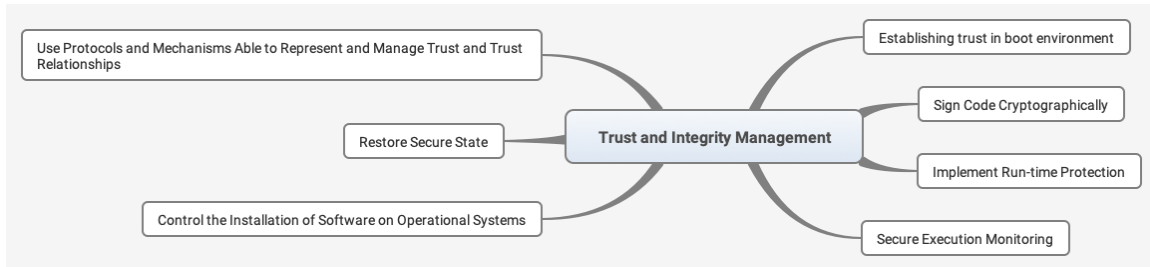

Identify Framework and Platform Security Features

Selecting an Integration Framework

7.2.13.1. Selecting an Integration Framework

7.2.14. Properly Configuring Rebranded Devices Used as Part of a System so that Unnecessary or Unintended Services do not Remain Active after the Rebranding

7.3. Trust and Integrity Management

7.3.1. Establishing trust in boot environment

7.3.2. Sign Code Cryptographically

7.3.3. Implement Run-time Protection

7.3.4. Secure Execution Monitoring

7.3.5. Control the Installation of Software on Operational Systems

7.3.6. Restore Secure State

7.3.7. Use Protocols and Mechanisms Able to Represent and Manage Trust and Trust Relationships

7.4. Management of Security Vulnerabilities and/or Incidents

Reference: ENISA Baseline Security Recommendations for IoT

7.4.1. Establish procedures for analysing and handling security incidents

7.4.2. Coordinated disclosure of vulnerabilities

7.4.3. Participate in information sharing platforms to report vulnerabilities and receive timely and critical information about current cyber threats and vulnerabilities from public and private partners.

7.4.4. Create a publicly disclosed mechanism for vulnerability reports

7.4.4.1. e.g. Bug Bounty programs
