# UNIK4750 - Measurable Security for the Internet of Things L11 - Multi-Metrics Weighting of an AMR sub-system

György Kálmán, Mnemonic/CCIS/UNIK gyorgy@unik.no

http://cwi.unik.no/wiki/UNIK4750, #IoTSecNO

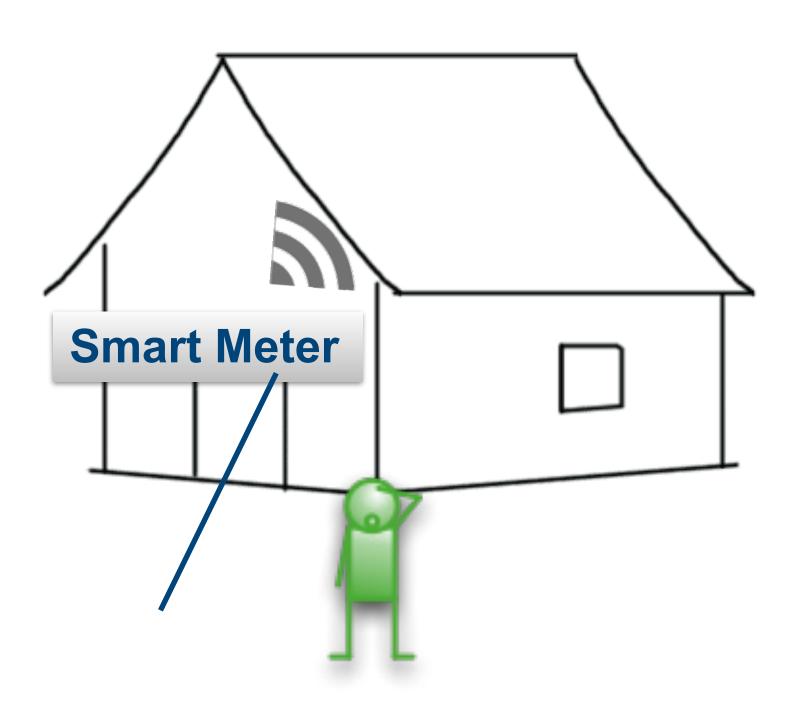

Josef Noll UiO/UNIK josef@unik.no

## Overview

- Learning outcomes L11
- Use case (application) Automatic Meter Reader (AMR)
- Identification of sub-system
- Metrics for the s,p-functionality
- Values for Security, Privacy
- weighting of components
- Multi-Metrics analysis
- Evaluation of results
- Future work

# **Expected Learning outcomes**

- Having followed the lecture, you can
- subdivide a system
  provide meaning for into sub-systems and components
- identify s,p,dfunctionalities
- reason over (discuss) the weighting of components with respect to total security

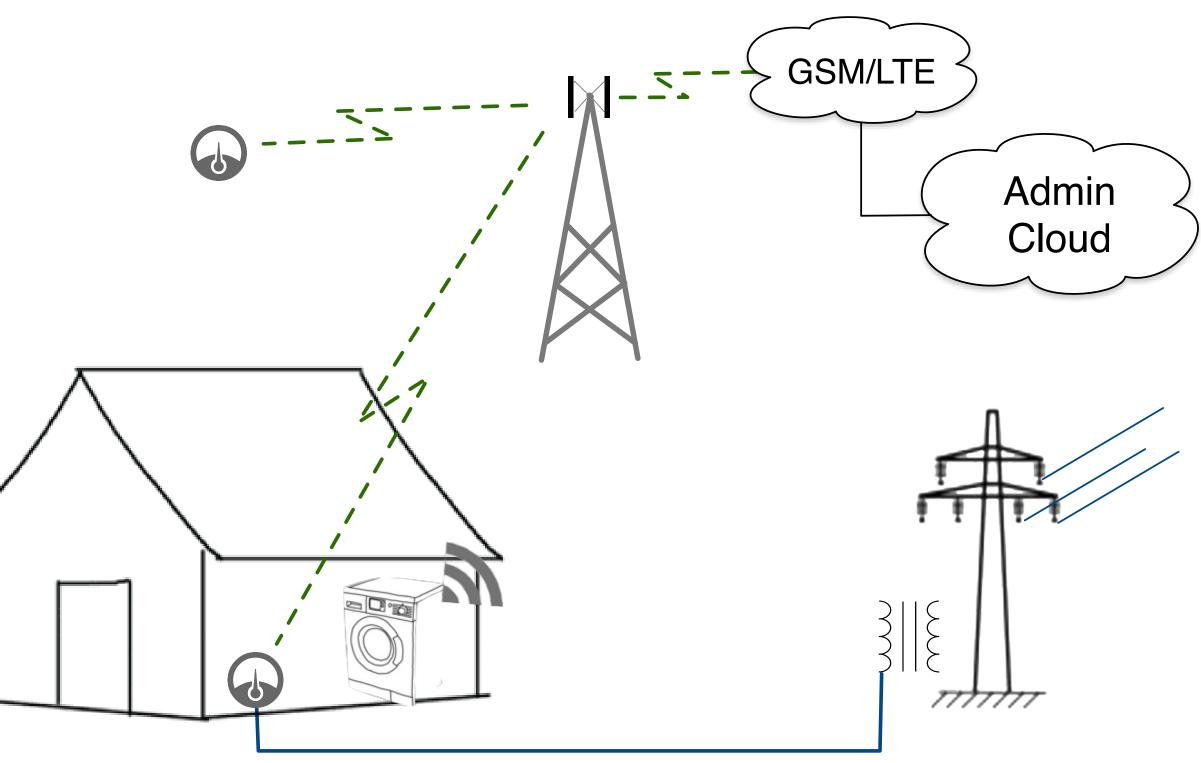

- apply the Multi-Metrics method
  - s,p-results

UNIK4750, Measurable Security for IoT - #IoTSec

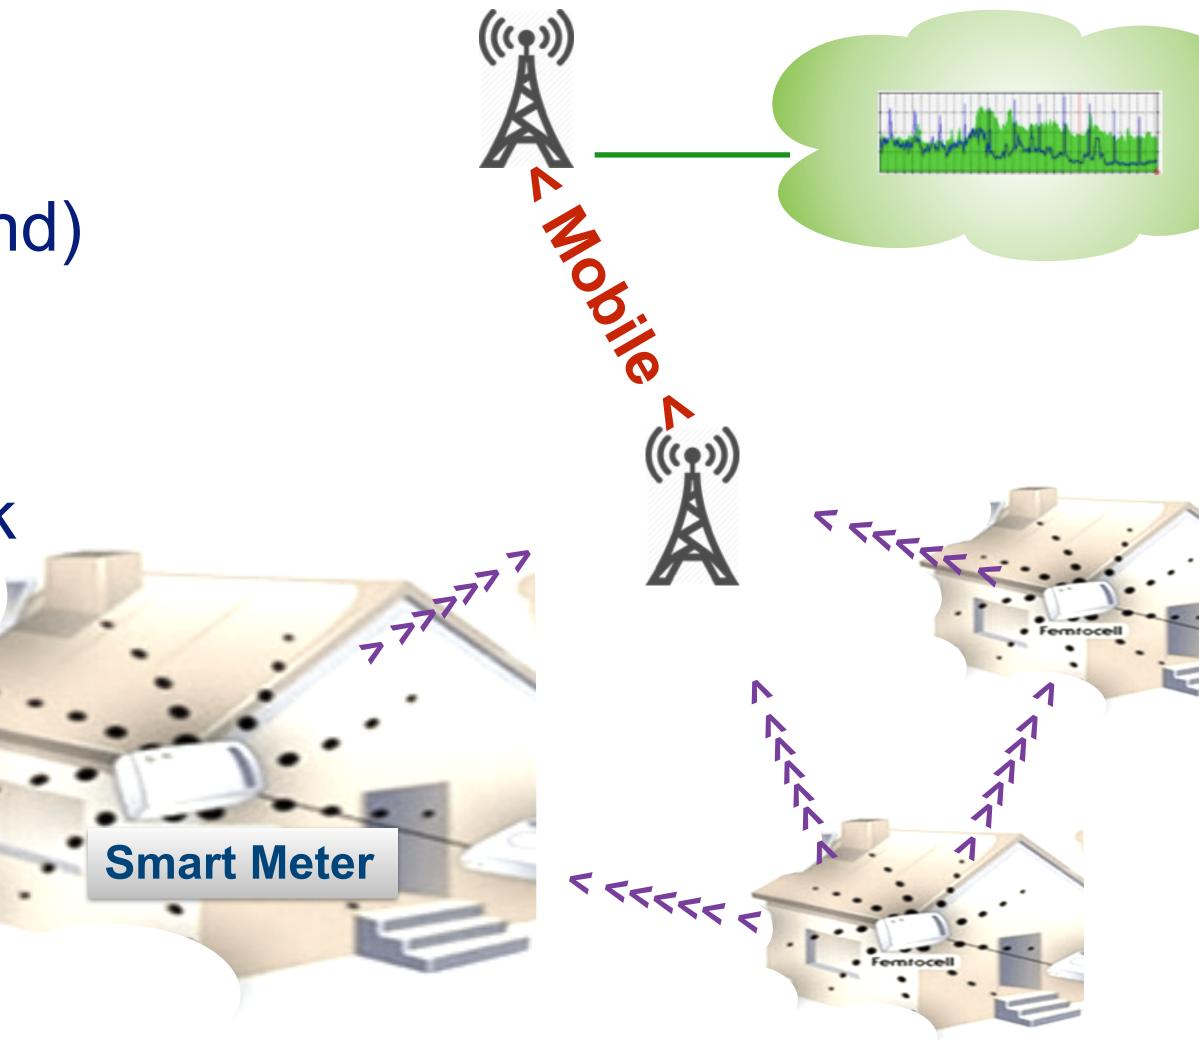

## **Current Infrastructure**

- Smart Meter (customer home)
  - connected via mesh or directly
  - proprietary solution (800 MHz band)
- Collector
  - collects measures
  - communicates via mobile network
- Mobile Network
  - as a transmission network
- Cloud (Provider)
  - entry point for remote access
  - Application platform

### [source: <u>seminarsonly.com</u>]

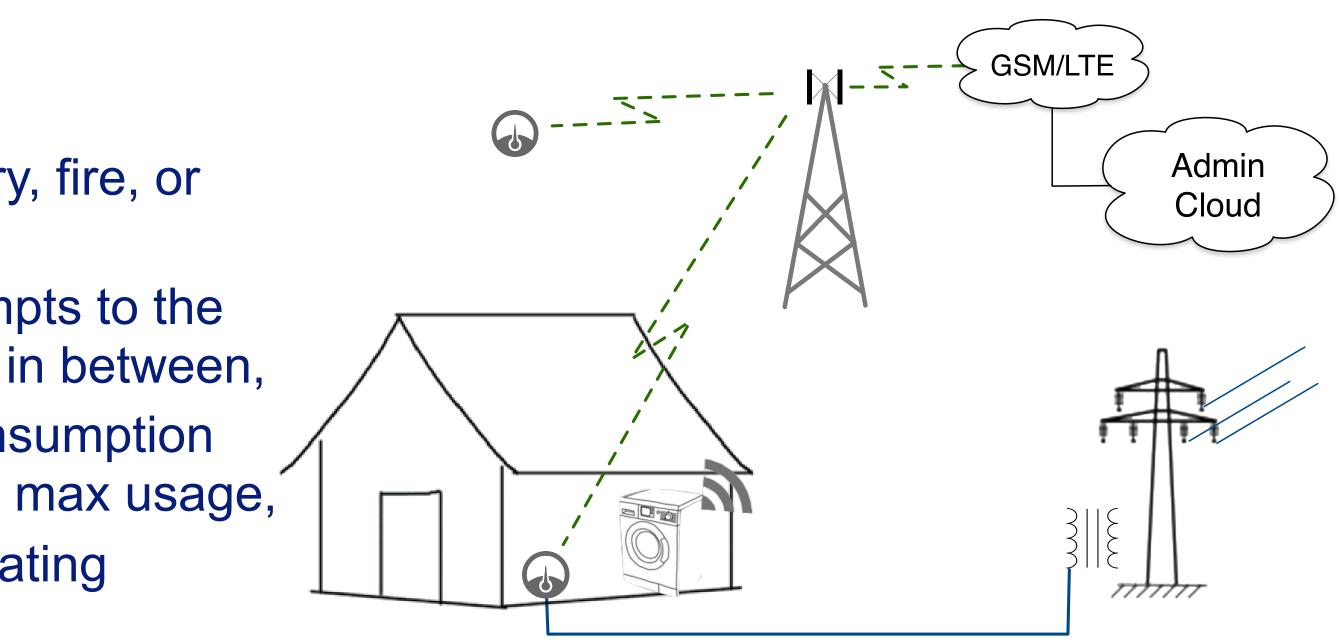

# **Application Scenarios for Smart Meters**

- Monitoring the grid to achieve a grid stability of at least 99,96%,
- Alarm functionality, addressing
  - ➡ failure of components in the grid,
  - alarms related to the Smart Home, e.g. burglary, fire, or water leakage,
- Intrusion detection, monitoring both hacking attempts to the home as well as the control center and any entity in between,
- Billing functionality, providing at least the total consumption every hour, or even providing information such as max usage,
- Remote home control, interacting with e.g. the heating system
- Fault tolerance and failure recovery, providing a quick recovery from a failure.
- Future services
  - Monitoring of activity at home, e.g. "virtual fall sensor"

## Action: **Establish Application Goals for Security & Privacy**

- Discuss with your neighbours the security and privacy goal for :
- Billing (1/hour)
  - Security, Privacy Goal: (s,p) Range [0...100]
- Fire alarm
  - Security, Privacy Goal: (s,p) Range [0...100]
- Home Control (1/hour) Security, Privacy Goal: (s,p) - Range [0...100]

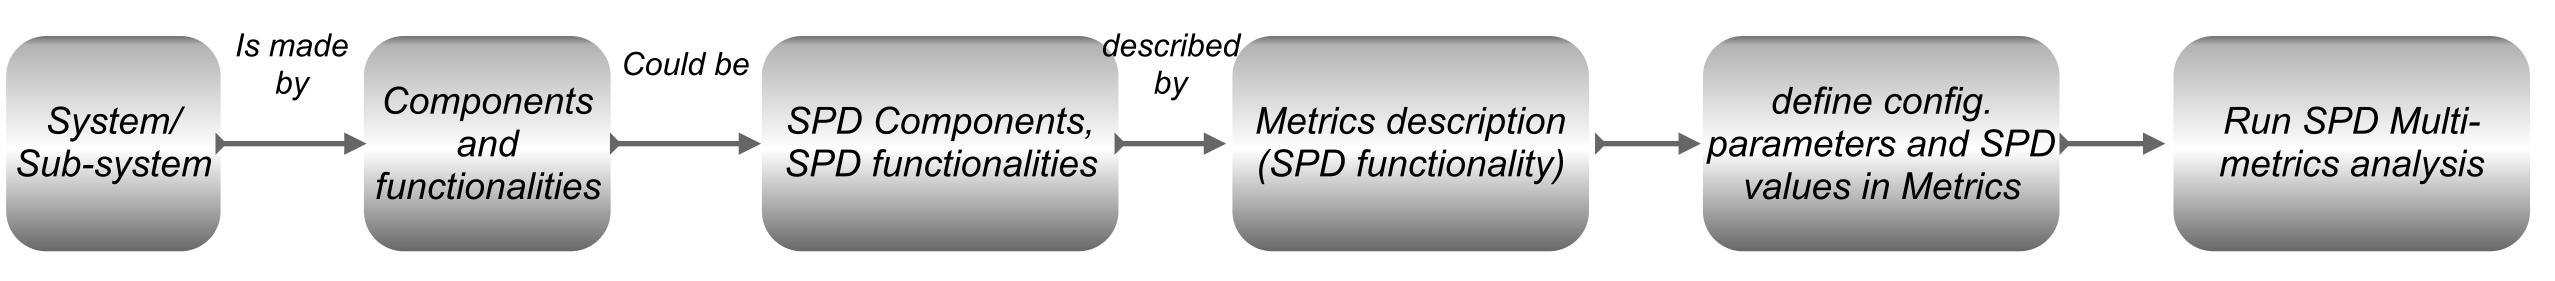

Goal: "basis of discussion" - why?

## Methodology and AMR system: From System description to SPD level

- System: Automatic Meter System (AMS) consists of reader (AMR), aggregator, communications, storage, user access
- Sub-systems: AMR consists of power monitor, processing unit, communication unit
- Component: AMR communication contains of a baseband processing, antenna, wireless link
- Configuration Parameter: Wireless link: f=868 MHz, output power=?, Encryption=?

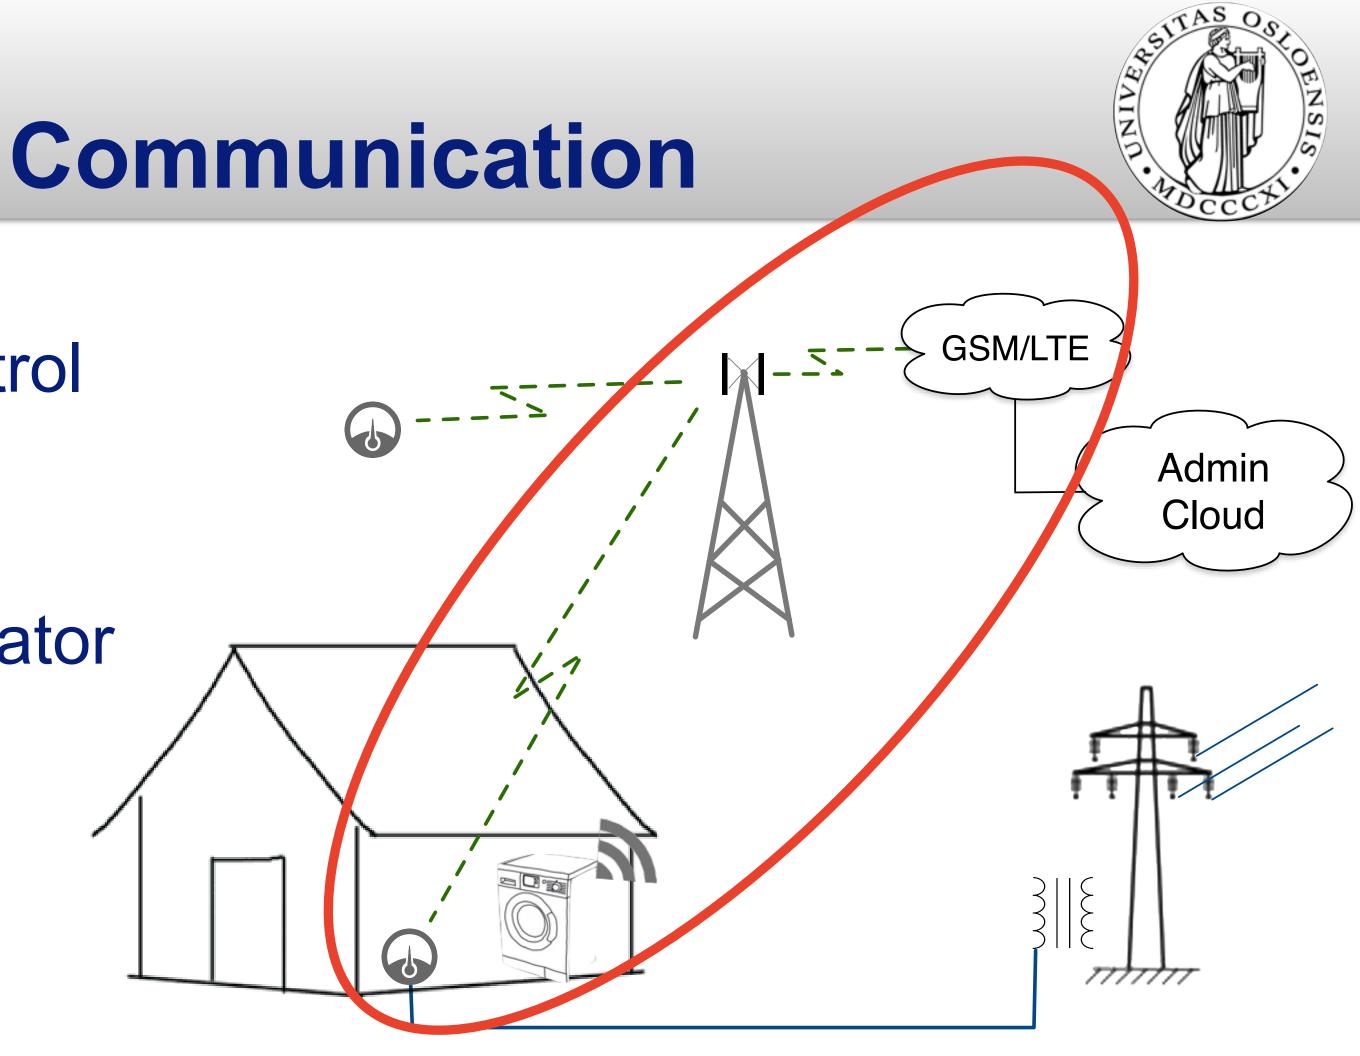

## Sub-system analysis Here: Smart Meter with Communication

- the Automatic Meter Reader (AMR)
  - AMR to measure, sense and control power consumption
- the Mesh radio link
  - direct communication to concentrator
  - or multi-hop through other AMR
- the Mobile link sub-systems
  - from collector to mobile operator
  - typical 2G/3G/4G data, or SMS

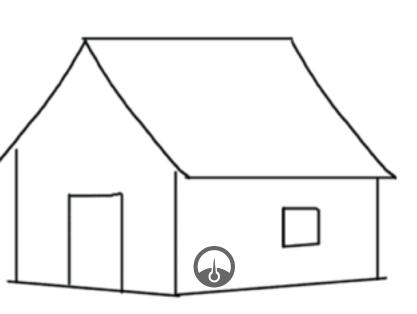

## **Sub-system analysis Metrics for AMR**

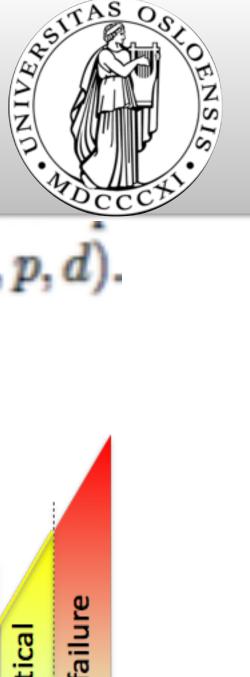

- the Automatic Meter Reader (AMR)
  - (1) remote access metric (yes/no)
    - reading, or just controlling
  - (2) authentication metric
    - everyone, or authenticated user
  - (3) encryption metric (on, off)

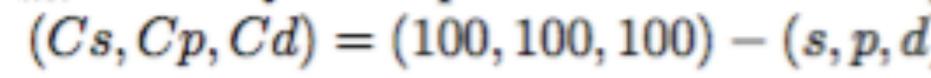

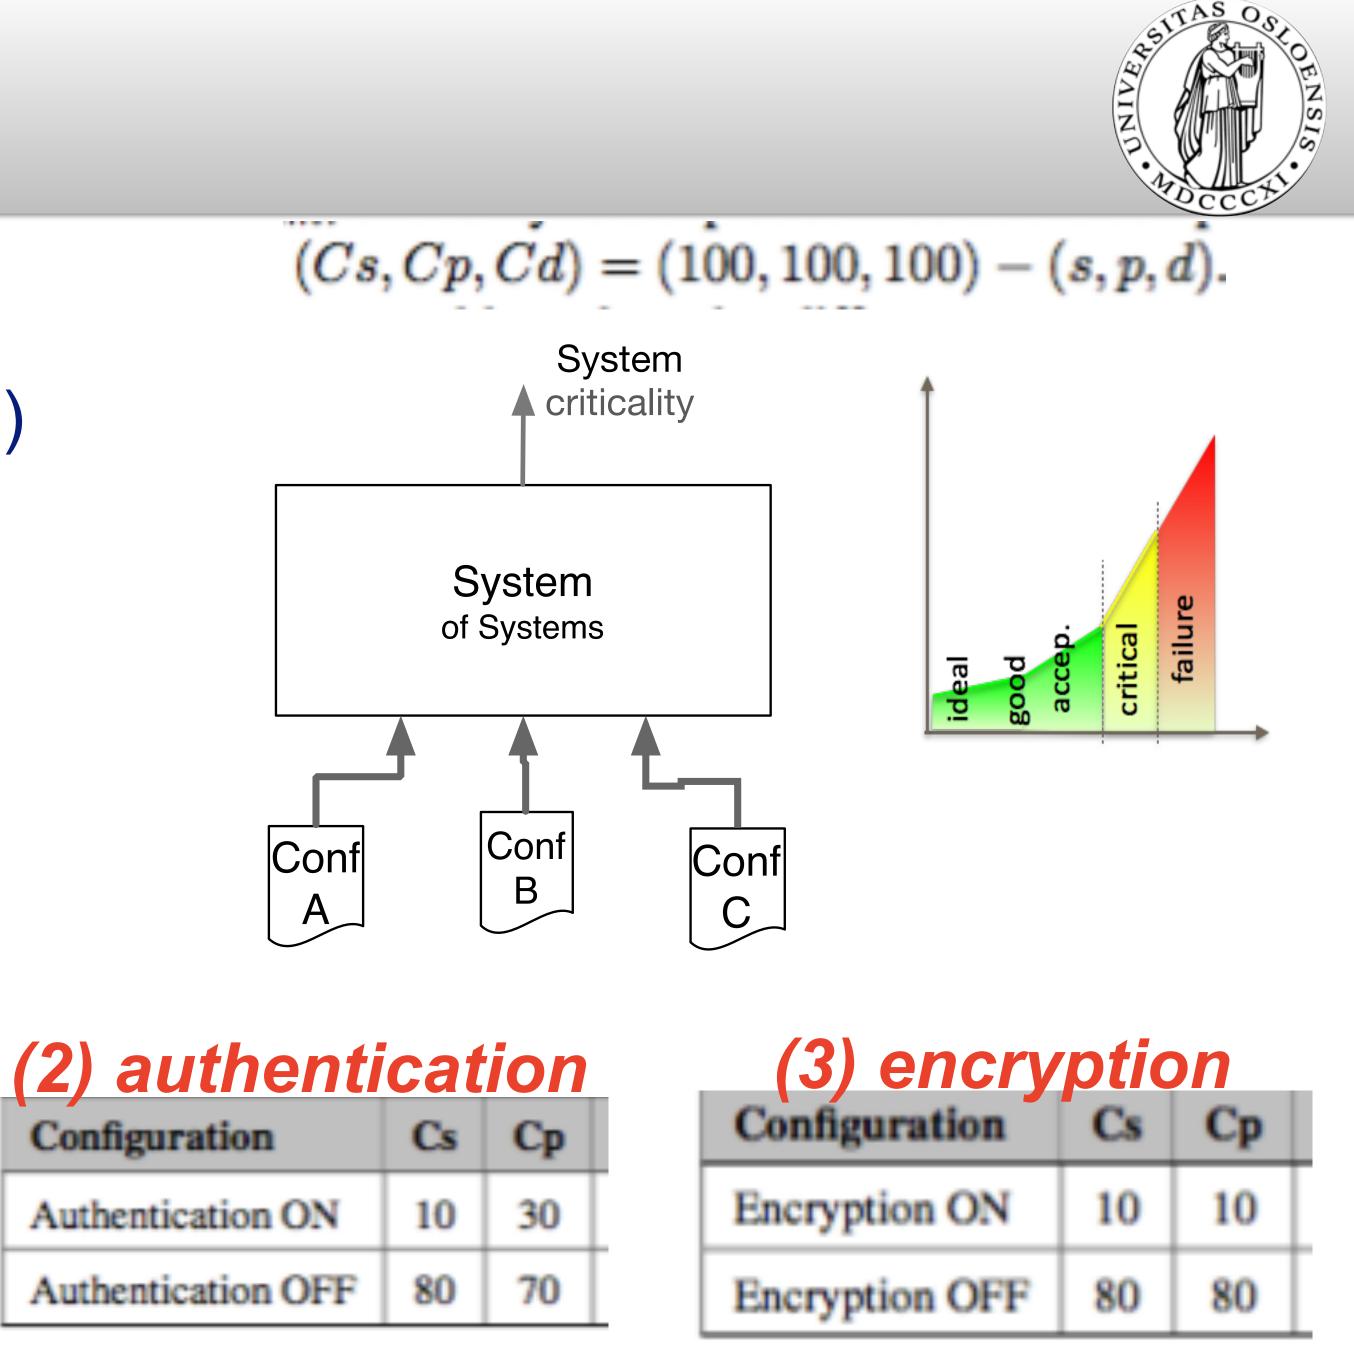

### (1) remote access

Configuration	Cs	Ср	
Remote Access ON	60	60	
Remote Access OFF	10	20	

UNIK4750, Measurable Security for IoT - #IoTSec

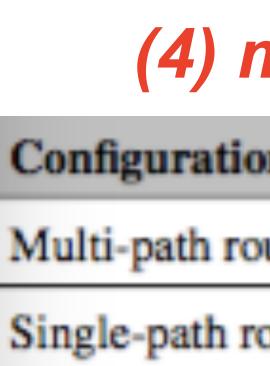

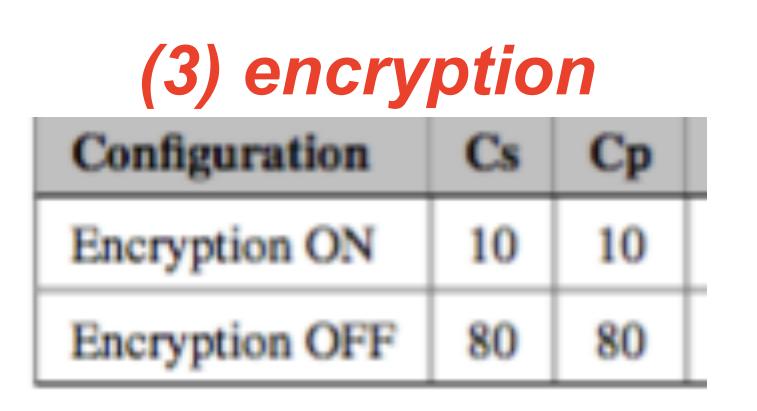

## **Sub-system analysis Metrics for Mesh Radio**

- the Mesh radio link
  - (4) mesh
  - (5) message rate
  - (3) encryption

Configuration	Cs	Ср
1 hour	20	20
20 min	25	30
1 min	40	50
5 sec	50	70

### 

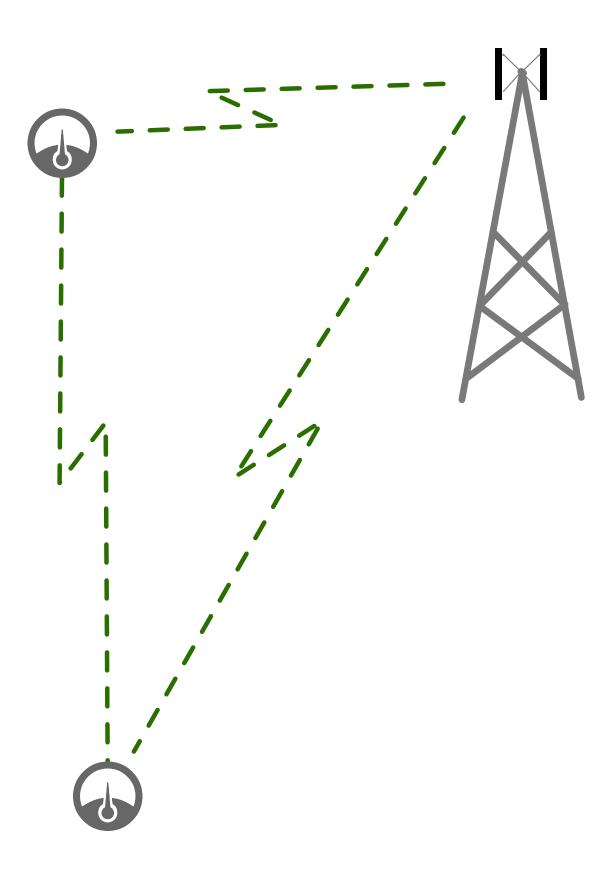

UNIK4750, Meas

### (4) mesh

n	Cs	Ср	
outing	60	60	
outing	30	30	

### (5) message rate

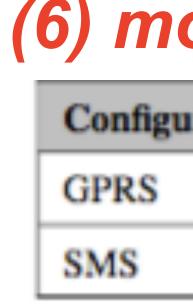

## **Sub-system analysis** Metrics for mobile link sub-system

- the Mobile link sub-systems
  - (6) mobile channel (2G or SMS)
  - (6+) 3G/4G, IP, powerline
  - (3) encryption

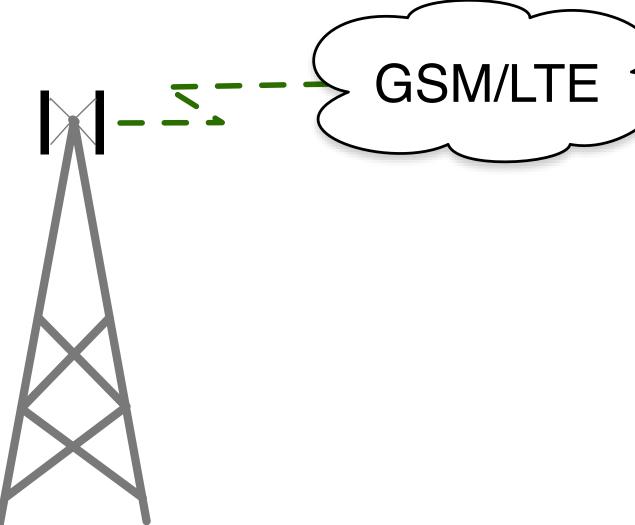

Configuration	Cs	Ср
Encryption ON	10	10
Encryption OFF	80	80

### (6) mobile channel

ration	Cs	Ср
	60	70
	40	50

## **AMR sub-system analysis Summary of Metrics for functionality**

- the Automatic Meter Reader (AMR)
  - (1) remote access metric
  - (2) authentication metric
  - (3) encryption metric
- the Mesh radio link
  - (4) mesh
  - (5) message rate
  - (3) encryption
- the Mobile link sub-systems
  - (6) mobile channel (2G or SMS)
  - (3) encryption

· <b>y</b> (1)			_ Ari
Configuration	Cs	Ср	
Remote Access ON	60	60	
Remote Access OFF	10	20	

(3)			
Configuration	Cs	Ср	
Encryption ON	10	10	
Encryption OFF	80	80	

(4)				
Configuration	Cs	Ср		
Multi-path routing	60	60		
Single-path routing	30	30		

(6)			
Configuration	Cs	Ср	
GPRS	60	70	
SMS	40	50	

Configuration	Cs	0
Authentication ON	10	3
Authentication OFF	80	7

13

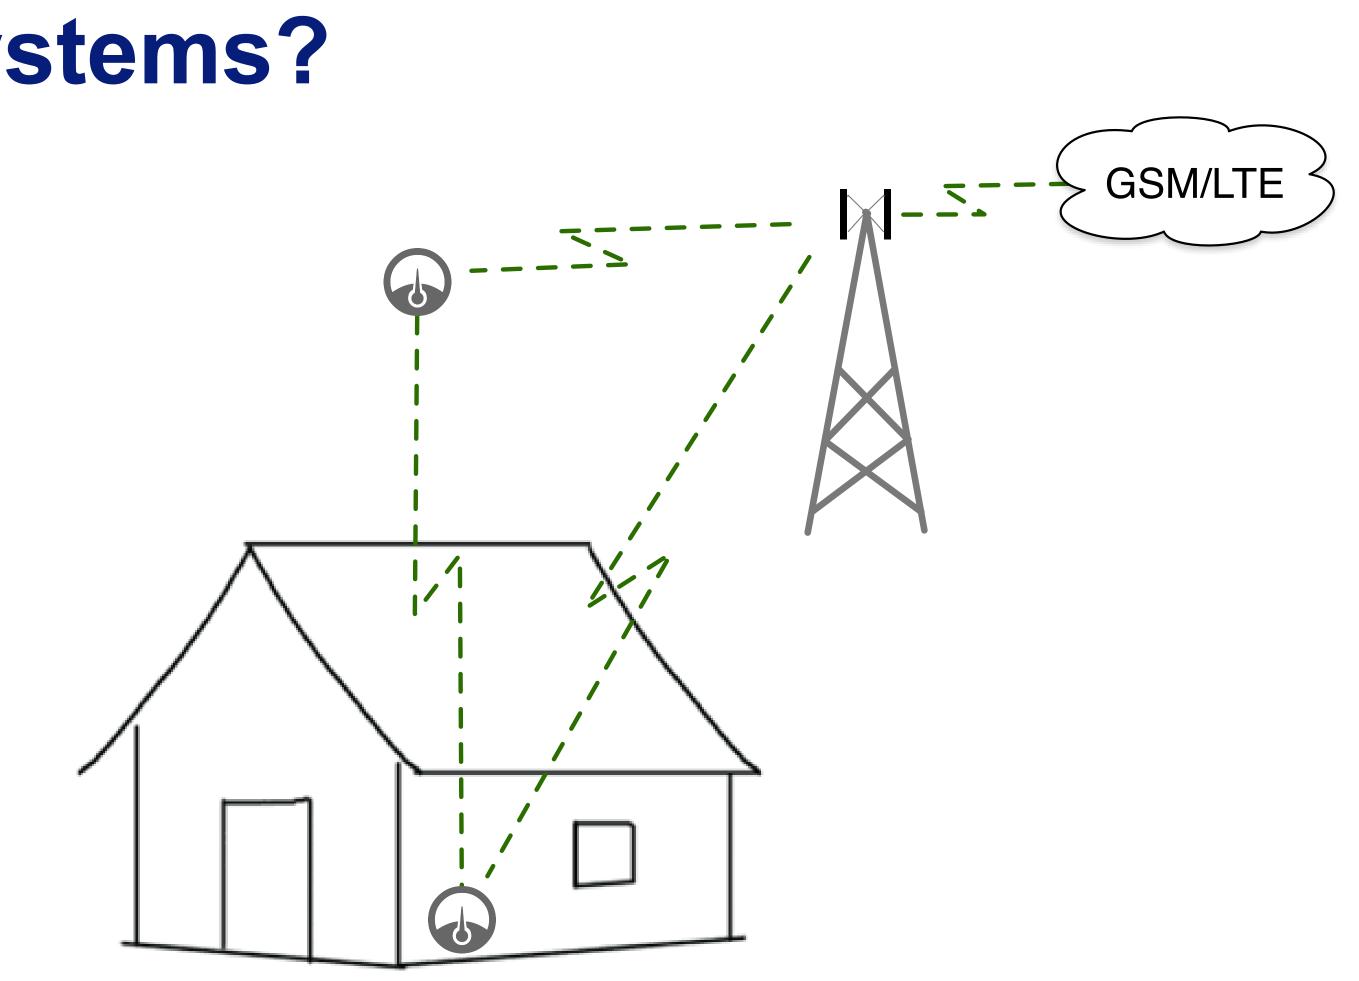

# Why weighting of sub-systems?

UNIK4750, Measurable Security for IoT - #IoTSec

# Sub-system weighting

- Component criticality from metrics
- sub-system criticality from evaluation of components
- system criticality from evaluation of sub-systems
- Criticality C through root mean square weight
- Actual criticality x<sub>i</sub> for component or (sub-)system
- Weight w; for each metric,
- Result will maximise the impact of high criticalities

UNIK4750, Measurable Security for IoT - #IoTSec

$$C = \sqrt{\sum_{i} \left(\frac{x_i^2 W_i}{\sum_i^n W_i}\right)} \qquad \qquad W_i = \left(\frac{w_i}{100}\right)$$

### Table 8 Sub-systems and components weights

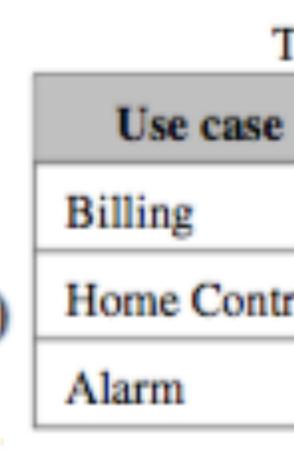

Sub-system	Sub-sys. Weight	Component	Comp. Weight
		Remote Access	70
AMS	80	Authentication	80
	Encryption	Encryption	80
		Mesh	60
Radio link	50	Message Rate	80
		Encryption	40
Mobile link	20	Mobile link	70
WIODIIC IIIIK	20	Encryption	40

## s,p-goal versus system-s,p

- 11 possible configurations
  - selected as combinations of "states"
- highest SPD element dominates the outcome of the metrics
  - Billing & Home Control: security
  - Alarm: dependability
- Sensitivity Analysis:
  - max security: s=84
  - same config: p=77
  - satisfies billing
  - satisfies home control

### 

UNIK4750, Measurable Security for IoT - #IoTSec

A SITAS OSTORIZED				
	Table 1 SPD <sub>Goal</sub> of ea			
Use Case	Security	Privacy		
Billing	90	80		
Home Control	90	80		
Alarm	60	40		

Table 9 Selected configuration SPD level for each use case

;	SPD <sub>Goal</sub>	Configuration	SPD level	SPD vs SPD	
	(90,80,40)	10	(67,61,47)	(,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	
rol	(90,80,60)	10	(67,61,47)	( <b>0</b> , <b>0</b> , <b>0</b> )	
	(60,40,80)	6	(31,33,63)	( <b>0</b> , <b>0</b> , <b>0</b> )	

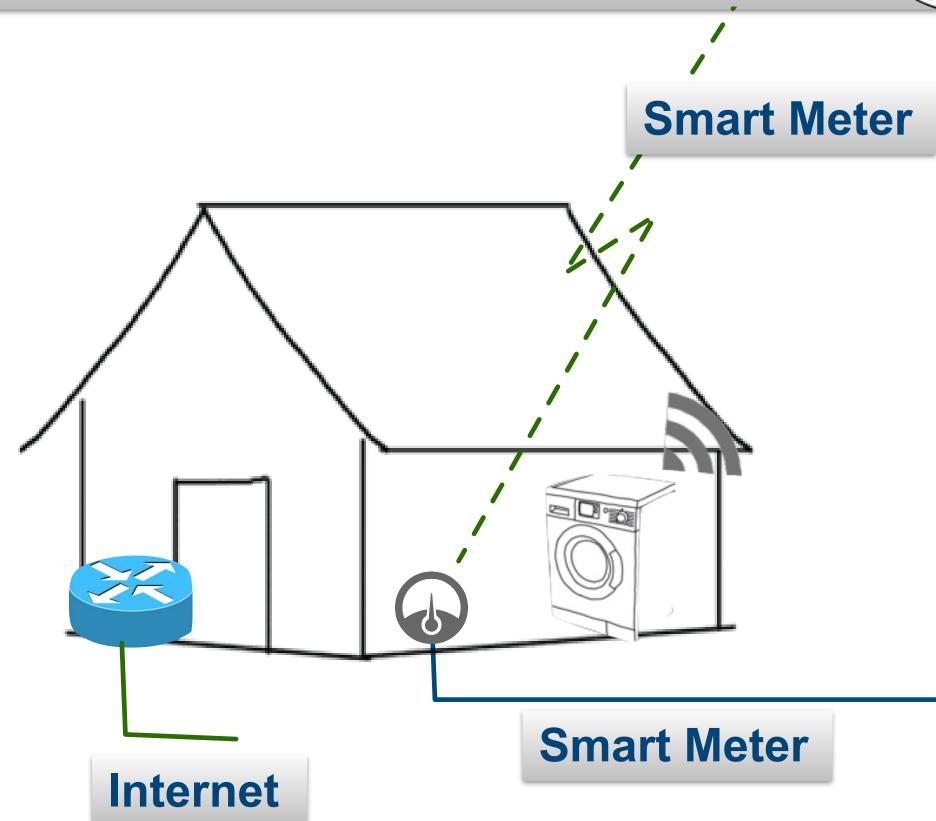

# **Upcoming Infrastructure**

- Smart Meter
  - read and control
  - ➡ logic?
- Smart Home
  - intelligent devices
  - on-demand regulation
- Challenges
  - Logic: Centralised <---> Fog
  - Smart Meter: Information <---> Control
  - Smart Grid Information <---> Internet Info

## Conclusions

- Security and Privacy methodology applied for Smart Grid
- Sub-system Meter Reader, Mesh communication, Mobile Communication assessed
- Weighting, see example

 11 configurations assessed, best result providing (s,p,d) = (84,77,42)

Table 8 Sub-systems and components weights

Sub-system	Sub-sys. Weight	Component	Comp. Weight
AMS	80	Remote Access	70
		Authentication	80
		Encryption	80
Radio link	50	Mesh	60
		Message Rate	80
		Encryption	40
Mobile link	20	Mobile link	70
		Encryption	40

## **Upcoming lectures**

- L12: System Security and Privacy Analysis
  - $|\text{SPD}_{Goal} \text{SPD} \text{ level}| = \leq 10$ , green  $\bigcirc$ .
  - $|\text{SPD}_{Goal} \text{SPD} \text{ level}| = > 10, \le 20, \text{ yellow} = .$
  - $|\text{SPD}_{Goal} \text{SPD} \text{ level}| = > 20$ , red  $\bigcirc$ .

## • .... applying Multi-Metrics on your own
