Comments

The following attachments document our involvement in the proposal writing
* 11625452_Prosjektregnskapsrapport_0.pdf - for cost declaration related to the proposal writing
* 11625452_Annet_0.pdf - Submitted proposal (90 pages)
* 11625452_Annet_1.pdf - EU receipt for submission of the proposal.

Movation is a key player in the SPHERICS proposal. The social network use case is based on
our Innovation Stock Exchange, the "InnoBørs.no". This importance is represented through the
leadership of one workpackage (WP) and three tasks.

Movation is also the key driver for exploitation: "The successful external exploitation of SPHERICS
is very important to the continuity of the project results. Based on these business workshops a
dedicated exploitation plan of each partner will be discussed an analysed through the standardized
Scorecard process of Movation, providing indications for business, branding, team, partnering and
technology, amongst others."

A list of main tasks with Movation is provided to show the role of Movation:
WP2: MOV will provide real-world requirements based on the InnoBors ecosystem of SMEs and
Inner Circle partners.

WP3: MOV will contribute to the advanced identity management, based on experiences from our
cloud solution.

WP4: MOV will lead the implementation of the Trust and Reputation Management (T4.3), and link
the reputation to social network activities and professional relations.

WP6: MOV will lead the social networking scenario validation (T6.3), and will relate this work to
business opportunities as seen for the InnoBors.

WP7: MOV will lead the work package and the dissemination task (T7.1). Besides the scientific
dissemination coming from our academic partners and the exploitation from all industrial partners,
the focus will be on targeted dissemination and business workshops to create an ecosystem for
piloting the outcome of SPHERICS.

2.   Any requests to submit attachments separately must be fulfilled. Has this been   Yes
     done?
